AFRISO

Dear business partner

Whether you are looking for products for groundwater protection, flue gas monitoring or industrial measuring and control technology solutions for process engineering – the AFRISO range provides proven, competitively priced series products.

The catalogue DOMESTIC TECHNOLOGY covers all products for safety and measuring equipment for heating systems, solutions for energy savings and water technology as well as alarm units, sensors, actuators and smart building systems for wireless building automation.

The catalogue INDUSTRIAL TECHNOLOGY comprises the complete range of high-quality measuring instruments and system solutions for pressure, temperature and level as well as customised, industrial solutions for stationary gas analysis – for your specific industrial application.

The catalogue PORTABLE MEASURING INSTRUMENTS covers certified mobile service measuring instruments for flue gas analysis as well as testing and inspection equipment for maintenance and diagnostics. Ready to be used in any industry.

In addition, we develop and manufacture complex customised products as well as complete system solutions – precisely to your specifications. Going against the general trend, we insist on a high degree of vertical manufacturing integration from our own tool design and construction department all the way to fully automatic assembly machines for electronic components. This makes us fast, flexible and independent.

For us, globalisation is an opportunity to market our products – manufactured in Germany and Europe – on a global scale.

As a medium-sized company, we place particular importance on personal contact with you. There are many factors that set AFRISO apart from others – one of them is the people who make up the company. Competent experts provide you with optimum solutions – both technically and economically. And whenever you need it, a well trained team of service experts is at your disposal.

We look forward to a successful cooperation.

Best regards,

Matthias Blasinger
Managing Director Sales and Distribution
AFRISO-EURO-INDEX GmbH

Contents and Product Range

How to work with this catalogue

Table of Contents
Our product range covers measuring, control and monitoring technology for domestic, industrial and environmental applications.
This includes products for groundwater protection, flue gas monitoring, efficient use of energy, use of the sun, geothermal and rain as well as a complete range of pressure, temperature and level instruments.
In addition to the products presented in the catalogues, we manufacture special versions to customer specifications.
Please enquire.

Finding information
The catalogue DOMESTIC TECHNOLOGY is divided into 13 chapters. A chapter overview is provided on pages II and III. The blue chapter tabs on the side of the page let you easily find the desired chapter. Each chapter contains a detailed table of contents as well as an overview table and the main features of the products in that chapter to help you find the product page you need fast.
To find products, you can also use the comprehensive index in the appendix.
Usually, all information on a product is contained on one page and cross references guide you to other pages for fast and easy access to additional information such as fact sheets.

Enquiries
To make enquiries as simple as possible and to assist you in gathering all the necessary information, the appendix contains a number of checklists for enquiries, e.g. for pressure gauges, thermometers and level indicators.

Contact person
Our sales department is divided into three industry-specific sales groups. Please visit www.afriso.com/contact or see the second page of this catalogue for further information on your specific contact person.

Delivery times / stock items
All stock items have part numbers printed in blue in the price lists. Please enquire for the delivery times of non-stock items as they vary greatly depending on the product specifications.

Minimum order quantities / packing units
Many products can be manufactured in small quantities – in many cases, you may even order a single piece.
However, for some items there are minimum ordering quantities or packing units. The price list sections provide the appropriate information.

- The product package contains the specified number of products or can be delivered in the specified order quantity

- An additional package contains the specified number of products

Small order handling fee / minimum order value
For very small orders with net values below € 100 a handling fee of € 15 will be charged. No other minimum order conditions apply.

Return of goods
Goods can only be returned with return note and only up to 3 months after delivery, minimum value of goods for return is € 100,–. Please enquire for a return note at service@afriso.de. Please note that only standard stock items can be returned; products not available from stock and devices with ATEX approval cannot be returned. For returned stock items we charge 30 % of the price for testing and handling or at least € 40. Shipping costs for returns are to be borne by the customer.

Prices / terms of delivery
Please refer to your local AFRISO representation or get in touch with the AFRISO headquarters for detailed price information and conditions. We will charge a fee of € 10,– per shipment for drop shipping.
Our Terms of Delivery apply (see www.afriso.com or appendix). This catalogue supersedes all previous versions, including previous prices. All prices subject to change; the catalogue may contain printing errors.

Technical modifications
As we are constantly improving our products, we reserve the right to technical modifications without prior notice.

AFRISO

AFRISO quality products

AFRISO quality products are continuously being enhanced and are subject to stringent inspections. Quality labels and approvals designate special features and application areas of the products. For certificates and manufacturer's declarations, please refer to chapter 13 or to www.afriso.com, INFO CENTRE > Downloads or to the directly to the product on the website.

All products with the quality label PROOFED BARRIER® are odour-tight. The quality label is awarded by the Fraunhofer-Institut (IVV) in Freising, Germany, exclusively for components that have passed stringent initial and repeat tests.

The Bio-Oil label certifies chemical resistance and guarantees full performance and functionality of the products even if biodiesel, biofuel or additives are used. The percentage shown corresponds to the maximum permissible admixture.

In flood hazard areas, oil must be kept from escaping from oil tank systems as a result of buoyancy, flooding, or damage due to floating refuse. AFRISO products with the label "Suitable for Use in Flood Hazard Areas" meet this requirement. See the individual catalogue pages for details on flood water resistance. After a flood, the information provided in the operating instructions must be observed.

Solar components by AFRISO allow for effective use of thermal solar systems in domestic technology. All labelled products are universally applicable and tuned to each other.

The DVGW is the German technical and scientific association for gas and water. The association is concerned with technical and scientific aspects of the supply of gas and water, implements results in the form of the national German DVGW rules and also contributes to DIN, EN and ISO standards. AFRISO products bearing the DVGW label have been tested and approved in compliance with the stringent safety requirements of the DVGW.

PED
DGRL

The PED (Pressure Equipment Directive 2014/68/EU) specifies the requirements for selling pressure equipment within the European Union. Please refer to chapter 11 for further details on our mechanical and electronic pressure gauges.

The European Ecodesign Directive covers Energy-related Products (ErP). It went into force force in August 2007 and was implemented in the EU member states as separate legislation. This directive is geared towards increased energy efficiency of electronic equipment in order to reduce the negative impact on the environment, such as CO_2 emission. ErP-Ready means that the electronic equipment bearing this logo complies with this directive.

EnOcean – Green. Smart. Wireless. EnOcean is a battery-less wireless technology which allows for maintenance-free sensor solutions. These sensors deliver data for intelligent networks in buildings and for the Internet of Things. The basic idea behind the innovative EnOcean® technology is driven by a simple observation: Wherever sensors capture measured values, the energy state changes as well. A switch is pressed, the temperature changes or the illuminance varies. These processes provide sufficient energy to transmit wireless signals. www.enocean.com

EnOcean-ready

The label "EnOcean-ready" on the WATCHDOG LINE alarm units indicates that the PCB of the device features a slot for the EnOcean® TCM 320 wireless module. It is sufficient to plug in the wireless module to integrate the device into a smart home system based on EnOcean®.

Suitable devices any application. In order to be able to optimally focus on the requirements of the individual target markets, we have divided our product portfolio into the areas of DOMESTIC TECHNOLOGY, PORTABLE MEASURING INSTRUMENTS and INDUSTRIAL TECHNOLOGY. The corresponding icons allow for easy assignment to main industries and provide for easy navigation in our complete range of products. In addition, we offer customised OEM solution in these areas.

How to work with this catalogue

AFRISO catalogue DOMESTIC TECHNOLOGY: Clear structure and layout

- Clear user guidance
- Detailed tables of contents
- Overview tables with product features

- Easy-to-find tabs
- Everything at a glance

Product advantages
and **main benefits**

Quality labels provide infor-
mation about special charac-
teristics or application areas of
products.

Application examples pro-
vide a clear picture of the appli-
cation and available options.

Digital tank contents indicator DTA 10

- For fuel oil EL, L, diesel fuel, biodiesel,
  water and other media with a density
  from 0.5 to 1.5 g/cm³
- Universal application in tanks of a height of
  up to 4 m
- Push-to-Read function:
  Fast start with just a push of a button

Application Location-independent level measurement with digital display and minimum level signal /reserve level
alarm with a single measurement. Suitable for tanks up to 400 cm liquid level. For fuel EL, L or die-
sel fuel, FAME 100 % as biodiesel (EN 14214), water (no drinking water) and AdBlue®. In addition, DTA
10 can be used for level measurement with all non-corrosive liquids with a density from 0.5 to 1.5 g/
cm². Remote measurements up to 15 m.

Description The electro-pneumatic tank contents indicator DTA 10 consists of a battery-operated control unit with
digital display and a measuring line. Measured values are displayed in litres, % and liquid level (cm).
Simple operation and setup via three function keys. Measurements are requested by means of pressing
the control key (Push-to-Read function). If the level falls below a minimum level that is freely adjustable
as a percentage, the backlight of the display flashes red to indicate an alarm during the measurement.
Standard tank shapes (linear, cylindrical and horizontal) are stored. Measuring line connection for hose
with 4 mm inside diameter.

Technology for Environmental Protection

AFRISO monitors, controls and protects the elements fire, water, earth and air – in the broadest sense. On the one hand, these elements symbolically stand for the relief and protection of the environment – and on the other, they illustrate our fields of activity:

- Flue gas control
- Energy savings
- Groundwater protection
- Conservation of resources

Product development revolves around our motto "Technology for Environmental Protection". We strive to improve the environment, to make processes which work with greater environmental compatibility and to avoid putting a strain on the environment. With a balanced portfolio of innovations, proven products, systems and services, we offer our customers efficient solutions which are of great benefit.
Tank. Heating. Water Technology.

AFRISO provides "Safety for Heating Systems". With a comprehensive range of building technology products, AFRISO prides itself in "Making Heating Systems Safe". Irrespective of whether the heating system uses regenerative energy or fossil fuels. In addition to this extensive range, a large selection of alarm instruments for the fast detection of level, liquid spillage, leakage, gas or smoke is available.

- Mechanical/pneumatic level indicators
- Overfill prevention systems/overfill alarm systems
- Leak detectors/leak monitoring systems
- Inner tank linings
- Equipment for fuel oil storage tanks, oil carrying pipes, boiler rooms, boilers and heating systems
- Heating controllers
- Distribution manifolds for heating, cooling and geothermal systems
- Smart home systems for building automation
- Valves and control technology for radiators and hydraulic balancing
- Equipment for drinking water supply

Gas analysis and service instruments

The BlueLine series is the perfect solution for official measurements, adjustment, servicing, maintenance and repair work. You benefit from an optimally tuned range of measuring instruments which is continuously setting new standards – from basic devices all the way to portable all-in-one flue gas analysers. AFRISO offers gas analysers, gas sampling probes and turnkey analysis systems with data acquisition systems for continuous emission monitoring.

- Portable gas analysers
- Portable measuring instruments, analysers and testers
- Modular sensor module systems
- Gas alarm units
- Stationary gas analysers
- Emission measurement technology
- Measurement data acquisition systems

AFRISO

Pressure. Temperature. Level.

In addition to our comprehensive range of mechanical and electronic pressure, temperature and level instruments, we also offer suitable mounting and installation accessories as well as display, control and evaluation devices.
AFRISO measuring instruments cover the following ranges:
Pressure: 0/2.5 mbar to 0/4,000 bar
Temperature: -50 °C to +1,100 °C
Level: 0/20 cm to 0/250 m

- Pressure gauges
- Accessories for pressure gauges
- Chemical seals
- Pressure transducers
- Bimetal thermometers and gas filled thermometers
- Thermostats
- Resistance thermometers
- Electronic level indicators
- Display, evaluation and control units
- Event reporting systems/communication systems

Special designs and system solutions

In addition to our comprehensive range of standardised, proven off-the-shelf products, we also offer customised special products made exactly to your requirements. We are constantly setting new standards with innovative concepts, e.g. using plastic fittings instead of metal ones or a combination of plastic and brass materials in complex assemblies. Our range does not only cover the delivery of individual sensors, but includes suitable components for power supply and evaluation of the measurement signals. In the case of system solutions, we do the entire engineering for you, all the way to the production of the control unit – ready for operation.

Adapted to your specific requirements

- Housing geometry
- Shape and colour
- Mechanical or electrical connections
- Pre-assembled, tested, ready-to-connect assemblies

We know your industry

AFRISO is at home wherever there is measuring, controlling or monitoring required. As a full-range manufacturer, we offer our customers a broad product portfolio from a single source. A wealth of experience from numerous applications as well as our knowledge of the requirements in the individual markets make us a reliable partner in your industry. We know what is necessary as

Building technology

The subject of saving energy has been our focus for more than 50 years. From the start, we have supported the move towards geothermal and solar systems as well as the use of biogenous fuels by supplying professional components and assemblies.

Our range for the secure storage of fuel oil and professional equipment for heating systems reduces operating costs, helps make optimum use of fuels, provides timely warnings if hazardous situations arise and constitutes an active contribution to environmental protection. Innovative measuring instruments for flue gas analysis yield high-precision and reproducible results so that your customers can achieve their goals: the right amount of heat at the right time, low energy consumption and low emissions. And we always respond to sustainable new technologies, for example, by providing compelling sensors and systems for increasing security and convenience in smart homes.

Target markets

- Manufacturer of heat generators
- Manufacturers of solar thermal systems
- System suppliers of surface heating systems
- Tank protection/revision
- Tank manufacturers
- Heating and plumbing system wholesalers
- Electrical wholesalers
- Engineering and planning consultancies
- Smart home and building automation
- Manufacturers of fittings
- Chimney sweeps
- Public institutions, municipalities

AFRISO

a result of our many years as a supplier in the OEM business and our intensive contact with standardisation committees, associations and guilds. We tap our employees' know-how and expertise in the industry to make our customers' processes simpler, safer and more competitive. In process engineering, in building technology or facilities – you benefit with a strong partner at your side.

Industrial technology and process engineering
Reliability, precision and a long service life are crucial when it comes to highly automated processes. Our robust measuring devices deliver perfect measurement results and reliably monitor and control simple to highly complex processes – even under the most adverse conditions.

AFRISO solutions meet the pertinent directives and standards. Certificates, for example, for food-quality materials, explosion protection and resistance to media and temperatures attest to this.

AFRISO products meet the requirements

- Wide variety of process connections
- Large selection of materials
- Compact designs
- Hygienic and easy to clean
- Suitable for CIP and SIP
- FDA-listed materials
- Silicone-free versions
- Resistant to corrosive and abrasive media
- High overload safety
- Resistant to vibration and temperature

Target markets

- Machines and plants
- Tanks
- Food and beverages industry
- Chemical industry
- Pharmaceutical industry
- Cosmetics industry
- Biotechnology
- Refineries
- Offshore industry
- Mineral oil industry
- Raw materials industry
- Hydraulic and pneumatics (fluid engineering)
- Medical technology, safety engineering
- Energy production
- Technical trade

AFRISO quality

Although we serve an extremely wide variety of markets and industries, all AFRISO employees work according to the same values. Reliability, flexibility and independence are the basis of our day-to-day work.

Our corporate culture is marked by a sense of responsibility. We want our employees to be content here with us. Numerous offers for ensuring an optimum work/life balance and continuous optimisation measures within the framework of the occupational health and safety management system help us show this to the outside world. At AFRISO, quality is systematically planned and, at every stage of product development and production, managed and monitored. This is attested to by national and international approvals and certificates. Quality Assurance as per ISO 9001 and environmental management in accordance with ISO 14001 are a matter of course for us and implemented in every process.

AFRISO
Tradition and innovation perfectly in tune

Jürgen and Elmar Fritz,
great-grandsons of the company founder

In 1869, our great-grandfather Adelbert Fritz founded his company in Thuringia. When his son Franz Fritz, our grandfather, entered the company, the company name changed to "Adelbert Fritz & Sohn". AFRISO became a globally renowned brand for temperature and pressure measurement. For 50 years, the company focussed on glass thermometers, medical glass instruments and laboratory equipment; then, a small, thin-walled, circular and concentrically shaped metal sheet completely changed the AFRISO world in the 1920s. Two diaphragm half shells form a capsule element which expands or contracts depending on the pressure. This pioneering invention became the foundation for a host of innovative products: Precision pressure gauges, blood pressure measurement instruments and temperature controllers became the most important products for the time up to 1945 and the new beginning after that.

After World War II, Franz Fritz and his son Georg, our father, rebuilt the company in Kleingartach and in Güglingen in Württemberg. The capsule element was used in pneumatic level indicators which marked our entry to the fuel oil market. Back then, we developed overfill prevention systems and leak monitoring systems for the safe storage of mineral oil products, and technologies for environmental protection become the credo and mission for the future product portfolio. AFRISO secured the market leadership in this sector. Product development revolves around the motto "Technology for Environmental Protection" which is one of the key pillars of our corporate strategy.

△ AFRISO

Georg Fritz 1922–2004

Franz Fritz 1890–1968

Adelbert Fritz 1846–1918

The early 1960s marked the beginning of the internationalisation of AFRISO: sales and production companies were founded in almost all Western European countries. The oil crisis in 1973/1974 triggered the development of a comprehensive range of products for the efficient and environmentally friendly operation of heating systems. In 1972, we pioneered on the market with the first portable flue gas analyser and we have been a key driver in the development of mobile measurement technology ever since.

After the political change in Eastern Europe, subsidiaries were founded in Hungary, Romania, the Czech Republic, Poland, the Ukraine, Russia and China. Today, the AFRISO family comprises 19 branches. Together with more than 20 representations, we offer our customers optimum consulting and superior supplier's reliability all over the globe.

We are now the fourth Fritz generation to lead the company. We are very well aware of the benefits of a medium-sized company with a long tradition of innovation, run by its owners. The value of a handshake still applies in a figurative sense, and this is something everyone can count on – employees, suppliers and customers. For us, the past is not a closed chapter but an incentive to constantly adapt to changing market requirements. After more than 150 years, we are embracing a promising future, which we would like to shape with trend topics such as "smart home".

Elmar Fritz   Jürgen Fritz

AFRISO milestones

Products for electronic level measurement extend the range for industrial applications.

Founding of sales and production companies in Western Europe. AFRISO renamed AFRISO-EURO-INDEX.

The future lies in the economical and environmentally compatible operation of heating systems. AFRISO launches a broad product portfolio on the market.

Company founded by Adelbert Fritz. Production of glass thermometers, glass instruments and laboratory equipment.
Rebuilding of the company in Kleingartach and Güglingen/ Württemberg by Franz Fritz and son Georg Fritz.

1869 1920 1950 1955 1958 1960 1972 1974

A new era begins: Production of capsule elements as the basis for precision pressure gauges, blood pressure measurement devices and temperature controllers.

Market launch: Level indicators for fuel oil tanks. This is followed by overfill prevention systems and leak monitoring systems for the safe storage of oil products.

Market launch of the first portable electronic flue gas analyser.

AFRISO

Integration of SYSTRONIK into the corporate group. Measuring instruments for the industry and the environment are combined in a new division.

Market launch: Product portfolio for solar thermal systems.

Future-orientated: The Stationary Gas Analysis division engineers and implements system solutions for emission data acquisition.
Industry focus: Pressure transducer range DMU 02 Vario with high-flexibility connection technology.

Internationalisation: Founding of subsidiaries in Eastern Europe and Russia.

1981 1994 1996   2006 2008 2009   2011

Founding of subsidiaries in South Africa, China, India and South America.

Market launch: Product range for hydraulic balancing.

Market launch of the first compact manifold made of plastic.

Innovation: AFRISO presents the EUROLYZER ST, the first all-in-one flue gas analyser.

Dipstick, pipe for dipstick

1

Plastic dipstick

Application

For manual level measurement, primarily in cylindrical underground tanks. Suitable for the following media: fuel oil and diesel fuel.

Description

Dipstick made of flexible, break-proof plastic with 100 cm brass chain. Excellent readability due to cm graduation.

Technical specifications

Material
Plastic

Measuring ranges (tank height) / dipstick length
160 cm / 170 cm
200 cm / 210 cm
250 cm / 260 cm
290 cm / 300 cm

Pipe for dipstick

For suspension in 1" pipe. Protects inner tank linings and coatings against damage caused by the dipstick.

Pipe for dipstick, crimped at one end, closed at the other end. Various lengths available, suitable for AFRISO dipsticks.

Material
Steel, galvanised

Connection

Pipe for dipstick	Dipstick
Length 160 cm	Length 170 cm
Length 200 cm	Length 210 cm

Mechanical level indicators

1

Part no. 16500 = G1½

Part no. 16540 = G2

G2
G1½

Ø 43 mm
MT-Profil R – G1½ and – G2

Application

For continuous level measurement in tanks containing fuel oil EL, diesel fuel, biodiesel and water. For tanks heights from 0 to 250 cm. Suitable for use in flood hazard areas.

Description

Universal, mechanical level indicator with plastic planetary gear. Measuring range is adjustable from 0 to 250 cm by reversible scale.
With reversible scale 0–150 cm and 0–250 cm for fast adaptation to the tank height. Odour-tight. Watertight up to 10 m water column.

Technical specifications

Measuring range (tank height)
0/150 to 0/250 cm

Displayed values
0/150 or 0/250 liquid level in cm

Connection thread
G1½ or G2

Housing / float
Display: ABS, impact-resistant
Float: PE-HD

Unimes

For continuous level measurement in tanks containing fuel oil EL, diesel fuel, biodiesel and other low-viscosity media which do not attack materials of the indicator. For tank heights from 900 to 2,000 mm.

Universal mechanical level indicator with fully adjustable brass and nickel silver movement. The pointer deflection amounts to 280° at tank heights and diameters from at least 900 mm to 2,000 mm maximum. The contents is indicated in % liquid level. With reference pointer for consumption monitoring.

Measuring range (tank height)
0/900 to 0/2,000 mm

Displayed values
0/100 % liquid level

Connection thread
G1½ and G2

Housing / float
Display: ABS, impact-resistant
Window: SAN
Float: PE-HD

1 Max. 50 m

Application

For level measurement in tanks containing fuel oil, diesel fuel and rainwater. For tank heights from 900 to 3,000 mm (depends on version). Suitable for use in flood hazard areas and for remote measurement up to 50 m.

Description

Universal, pneumatic level indicator with capsule movement. The tank height is fully adjustable. Measuring accuracy ±3 % of full scale value. A dual scale facilitates measurements in rectangular tanks (= linear tanks) and cylindrical tanks. Indication in % volume (Unitel) or % liquid level (Unitel for water). Impact-resistant plastic housing for wall mounting. With zero correction and integrated over-pressure safety device. Reference pointer for easy consumption monitoring. Connection for pipe or hose (6 mm outside diameter, universal) for tight mounting of the measuring line (e.g. Pneumofix). Watertight up to 10 m water column.

Technical specifications

Medium
Fuel oil or diesel fuel (density = 0.84 g/cm³) or water (density = 1 g/cm³) for Unitel for water

Measuring range (tank height)
0/3,000 mm (part no. 72500, fuel oil)
0/2,500 mm (part no. 72511, water)

Measuring accuracy
±3 % of full scale value

Operating temperature range
Ambient: -5/+55 °C

PVC hose (accessory)
For measuring line extension. 20 m PE measuring line 4 x 1 mm with hose extension piece

Scale (displayed values)
Unitel: Dual scale 0/100 % volume
Outer for rectangular tanks,
inner for cylindrical tanks
Unitel for water: 0/100 % liquid level

Housing
Wall mounting housing made of impact-resistant plastic with integrated hand pump
W x H x D 145 x 135 x 65 mm

A — Page 128

① Max. 50 m
② Tank height H
Application

For level measurement in tanks containing fuel oil and diesel fuel. For tank heights from 900 to 3,000 mm (depends on version). Suitable for use in flood hazard areas and for remote measurement up to 50 m.

Description

Universal, pneumatic level indicator with capsule movement. The tank height is fully adjustable. Measuring accuracy ±2 % of full scale value. A dual scale facilitates measurements in rectangular tanks (= linear tanks) and cylindrical tanks. The basic version indicates % of volume so that it is independent of the tank shape. Impact-resistant plastic housing for wall mounting. With zero correction at the front side, reference pointer and date indication for easy consumption monitoring; with integrated pressure relief device. The mechanism carrier of extremely rugged plastic is separated from the housing for stable zero point and high measurement accuracy. Sturdy brass connector with pressure screw for pipe or hose (Ø 6 mm) for tight installation of the measuring line. A vent screw, integrated in the connector, allows you to check the zero setting of the pointer. Watertight up to 10 m water column.

Technical specifications

Medium
Fuel oil or diesel fuel (density = 0.84 g/cm³)

Measuring range (tank height)
0/900 to 0/3,000 mm (part no. 28000)

Measuring accuracy

Mounting accessories pneumatic level indicators

1

Pneumofix type 2

Description Complete, universal mounting kit for pneumatic level indicators. Can be used for tanks of up to 4,000 mm in height or diameter. Consisting of screw fitting with dual thread G½ and G1, reducer G1 x 1½ x 2. Standpipe in tank with balance chamber. PVC measuring line, 20 m with 30 nail cable clips, hose connector (4 x 4 mm) and mounting accessories. Suitable for use in flood hazard areas. Watertight up to 10 m water column. If no connection socket is available at an individual tank, it is recommended to use Euroflex (see page 128).

Pneumofix

PVC hose Ø 4 x 1 mm

Description For extending the measuring line of pneumatic level indicators.
Consisting of: 20 m PE measuring line 4 x 1 mm with hose extension piece. Suitable for use in flood hazard areas. Watertight up to 10 m water column.

PVC hose with mounting accessories

Condensate trap KG 2

Description For protection of pneumatic level indicators against condensate. Made of high-grade, impact-resistant plastic. The condensate trap can be easily unscrewed for emptying. Universal connections for hose or pipe with 6 mm outside diameter. Suitable for use in flood hazard areas. Watertight up to 10 m water column.

Scope of delivery:
KG 2, incl. mounting material (screws, screwed connections)

Condensate trap KG 2

Reducers/adapters

Description **Reducer 2 x 1½**
Reducer G2 x G1½ made of grey plastic (ABS).

Reducer 1½ x 1
Reducer G1½ x G1 made of grey plastic (ABS).

Description **Flange adapter for battery tanks**
Flange adapter G1 or G1½ made of black plastic (ABS).

Mounting kit for battery tanks
For mounting of Unitel, Unitop or DTA if all process connections at the tank are used.

Application

For level measurement in tanks containing AdBlue® (density 1.09 g/cm³). For tank heights from 700 to 2,300 mm. Suitable for use in flood hazard areas and for remote indication up to 50 m. The term AdBlue® is the same as "NOₓ Reducing Agent AUS 32" and "Urea solution 32.5 %".

Description

Universal, pneumatic level indicator with capsule movement. Specially adjusted to the specific weight (density) of AdBlue® = 1.09 g/cm³. Fully adjustable from 700 to 2,300 mm tank height. Measuring accuracy ±2 % of full scale value. Indication in percentage of level. With zero correction at the front side, reference pointer and date indication for easy consumption monitoring; with integrated overpressure safety device. Universal measuring line connection for pipe or hose with an outside diameter of 6 mm. Easy mounting by means of a mounting kit specially designed for AdBlue®. Process connection G1 und G½, standpipe PVC 2.5 m with stainless steel balance chamber, 10 m measuring line PVC 4 x 1 mm, reducer G1 x G1½ x G2. Watertight up to 10 m water column.

Technical specifications

Measuring range
0/700 to 0/2,300 mm tank height

Measuring accuracy
±2 % of full scale value

Operating temperature range
Medium: 0/35 °C
Ambient: -5/+55 °C
(Please observe the pertinent regulations concerning the storage of AdBlue®!)

Scale (displayed values)
0/100 % liquid level

AFRISO

Digital tank contents indicator
DTA 10

- **For fuel oil EL, L, diesel fuel, biodiesel, water and other media with a density from 0.5 to 1.5 g/cm³**
- **Universal application in tanks of a height of up to 4 m**
- **Push-to-Read function: Fast start with just a push of a button**

A — Page 10
A — Page 10
A — Page 128

Application
Location-independent level measurement with digital display and minimum level signal (reserve level alarm) with a single measurement. Suitable for tanks up to 400 cm liquid level. For fuel oil EL, L or diesel fuel, FAME 100 % as biodiesel (EN 14214), water (no drinking water!) and AdBlue®. In addition, DTA 10 can be used for level measurement with all non-corrosive liquids with a density from 0.5 to 1.5 g/cm³. Remote measurements up to 15 m.

Description
The electro-pneumatic tank contents indicator DTA 10 consists of a battery-operated control unit with digital display and a measuring line. Measured values are displayed in litres, % and liquid level (cm). Simple operation and setup via three function keys. Measurements are requested by means of pressing the control key (Push-to-Read function). If the level falls below a minimum level that is freely adjustable as a percentage, the backlight of the display flashes red to indicate an alarm during the measurement. Standard tank shapes (linear, cylindrical and horizontal) are stored. Measuring line connection for hose with 4 mm inside diameter.

Technical specifications

Functions
Push-to-Read level measurement

Measuring range (tank height)
0/400 cm (fuel oil)
0/350 cm (water)

Measuring accuracy
±3.0 cm

Operating temperature range
Ambient: 0/50 °C
Storage: -20/+65 °C
Medium: 0/50 °C

Display
Multi-coloured, backlit graphical display (30 x 50 mm):
- Blue = Operation
- Red = Alarm
- Green = Setup

Indication of litres (5 digits), % or liquid level in cm

Measuring line
PVC hose 4 x 1 mm
Length 20 m
Balance chamber stainless steel

Supply voltage
9 V monobloc battery

Visual alarm
Backlight flashes red during measurement process

Housing
Wall mounting housing made of impact-resistant plastic (ABS)
W x H x D: 100 x 188 x 65 mm
Degree of protection: IP 20 (EN 60529)

Scope of delivery
- Control unit with 9 V monobloc battery
- Pneumofix type 2:
  20 m measuring line with bottom part, connection kit for G½, G1, G1½ and G2, 30 nail cable clips, hose connector (4 x 4 mm), mounting accessories

AFRISO

Digital tank contents indicator DIT 10

1

- **For fuel oil EL, L, diesel fuel, biodiesel and water**
- **Universal application in tanks of up to 4 m in height or diameter**
- **No external supply voltage required**
- **Push-to-read function for extremely long battery service life**
Application

For level measurement in tanks containing fuel oil EL, L or diesel fuel and FAME 100 % as biodiesel (EN 14214). Specially suitable for underground tanks and basement tanks, also in flood hazard areas. For filling levels from 900 mm to 4,000 mm.

Description

The hydrostatic level indicator consists of a control unit with digital display and a submersible probe with integrated pressure measuring cell. High measuring accuracy due to electronic sensor (pressure measuring cell). Simple operation due to device setup via menus. No bearing charts required since all standard tank shapes are stored. Watertight up to 10 m water column.

Technical specifications

Functions
Push-to-read, selection of units, calculation of total volume

Measuring range
0/400 mbar

Measuring accuracy
±1.5 % FS

Operating temperature range
Medium: -5/+70 °C
Ambient: 0/45 °C
Storage: -5/+70 °C

Display
4-digit, 12 mm high LCD 7-segment display with additional symbols

Displayed values
Litres, m³, %, liquid level in mm

Submersible probe
Housing: Stainless steel 304 (1.4301)
Cable: PVC, 6 m with breather tube
Diaphragm: Stainless steel 316 L (1.4435)
Seals: FKM (Viton)
Spacer: POM, PE

Supply voltage
1 x lithium battery 3.6 V (included)
Service life approx. 5 years

Housing
PA6, glass-loaded, blue,
Ø 75 mm, wall mounting

Degree of protection
Control unit: IP 51 (EN 60529)
Submersible probe: IP 68 (EN 60529)

Scope of delivery
- Control unit with digital display
- 5 m connection cable to probe
  (can be extended by up to 10 m)
- Moisture-proof junction box (IP 54)
- Submersible probe with 6 m submersible cable
- Screw connector kit G1 x G1½ x G2
- Mounting kit for withdrawal flange
  (PG 9 gland)
- Wall mounting

Hydrostatic indicator
TankControl 10

- **For fuel oil EL, L, diesel fuel, biodiesel and water**
- **Graphical indication of consumption and remaining range**
- **With visual/audible alarms, Acknowledge button and 2 relays**
- **Remote measurements up to 15 m**

1. Additional probe differential alarm
2. Floating probe
Application

Continuous level measurement with graphical display for indication of consumption (history), calculation of remaining range (forecast) and signalling of minimum or maximum levels as well as for level control. For tanks from 1,000 to 4,000 mm liquid level. Suitable for fuel oil EL, L, diesel fuel, FAME 100 % as biodiesel (EN 14214), water (no drinking water!) as well as similar liquids. In conjunction with an additional submersible probe for differential alarm also suitable for detecting level differences in communicating tanks (e.g. battery tanks) which may cause overfilling. It is also possible to connect a floating probe for backflow alarms (drain system, e.g. for rain water harvesting systems) or for additional minimum or maximum alarms. Specially designed for building technology. Suitable for use in flood hazard areas.

Description

The hydrostatic level indicator consists of a control unit with numerical and graphical display and a submersible probe with integrated pressure measuring cell. Optionally with additional submersible probe for differential alarm or with floating probe. The system displays either litres, m³, % or liquid level (mm). When the level falls below or exceeds an adjustable minimum or maximum value, the control unit triggers visual and audible (can be acknowledged) alarms. The value for submersible probe 2 is displayed in mm. If an adjustable level difference between submersible probe 1 and submersible probe 2 is exceeded, an alarm is triggered. Two additional relay contacts with selectable switching points are available for external alarm devices, for level control or for connection to telecommunication or building control systems. Easy operation due to device setup via menus. High measuring accuracy due to electronic sensing. Standard tank shapes are stored. Watertight up to 10 m water column.

Technical specifications

Functions

Selection of units, daily saving of level data, consumption monitoring, graphical evaluation of consumption values (up to 5 years), calculation of remaining range, alarm functions (min./max.), sensor error and short circuit alarms.

Measuring range
0/400 mbar

Measuring accuracy
±1.5 % FS

Operating temperature range
Medium: -5/+70 °C
Ambient: 0/45 °C
Storage: -5/+70 °C

Display
High-resolution, backlit graphical display (30 x 50 mm). Indication of either litres (6 digits), m³, % or liquid level in mm. Symbols for alarm functions.

Submersible probe
Housing: Stainless steel 304 (1.4301)
Cable: PVC, 6 m with breather tube
Diaphragm: Stainless steel 316 L (1.4435)
Seals: FKM (Viton)
Spacer: POM, PE
Degree of protection: IP 68 (EN 60529)

Supply voltage
AC 230 V
Lithium battery for data backup (calendar function)

Switching outputs
Relay contacts: 2 voltage-free changeover contacts
Contact rating: AC 230 V, 2 A

Hydrostatic level indicator TankControl 10

Technical specifications

Visual alarm
Red LED

Audible alarm
Integrated piezo buzzer, can be acknowledged

Housing
Wall mounting housing made of impact-resistant plastic (ABS)
W x H x D 100 x 188 x 65 mm
Degree of protection IP 54 (EN 60529)

Scope of delivery
- Control unit with graphical display and 15 m connection cable to the probe (cannot be extended)
- Submersible probe with 6 m submersible cable
- Moisture-proof junction box (IP 54)
- Screw connector kit G1 x G1½ x G2
- Mounting kit for withdrawal flange at plastic battery tanks

Options
- Submersible probe for differential alarm
- Floating probe (spare probe Minimelder)

Application examples TankControl 10
Monitoring of the levels in two communicating tanks. A submersible probe is installed in each tank. If the level difference exceeds a defined value, the unit triggers an alarm. The causes of the uneven levels can be removed prior to filling. Potential damage as a result of different levels in the two tanks is avoided.
Monitoring of the level in a fuel oil tank with early signalling of minimum level. With combined alarm light and horn as additional alarm equipment outside of the building and transmission of alarm messages, level data and reaming range to a central building control system.

Monitoring of the level in an outdoor rain water tank. A combined alarm light and horn is connected in the vicinity of the tank; TankControl 10 is installed inside the building. It is also possible to connect a float switch to monitor for backflow from the drain. The system can be extended by a GSM-based event reporting system.

Page 17

① Junction box with pressure relief port
② Digital display and control unit VarioFox® 24
③ Signalling device
④ HydroFox® DMU 08

Application

For electronic, continuous level measurement, e.g. in wells, drilling holes, water, containers or in waste water systems. Suitable for groundwater, drinking water, waste water (with optional FEP cable), diesel fuel, fuel oil; also for use in flood hazard areas.

Description

The level indicators HydroFox® DMU 08 use silicon technology and feature calibrated, amplified sensor signals which are available as standardised voltage or current outputs.

Technical specifications

Measuring accuracy
Deviation from the characteristic curve according to IEC 60770 – limit point calibration (non-linearity, hysteresis,Repeatability): < ±0.5 % FSO

Measuring ranges
Relative pressure: 0/100 mbar bis 0/300 mbar (see catalogue INDUSTRIAL TECHNOLOGY for further measuring ranges)

Overpressure safety
Depends on pressure range
4 x FS to 15 x FS (burst pressure)
3 x FS to 8 x FS (overload)

Operating temperature range
Medium: -10/+70 °C
Ambient: -10/+70 °C
Storage: -25/+70 °C

Temperature error band
in compensated range
0/70 °C ≤ ±1 % FSO/10 K

Dynamic characteristics
Response time ≤ 10 ms

Materials
Housing: Stainless steel 316 L
Diaphragm: Stainless steel 316 L
Seals: FKM (Viton)
Cable: PUR cable

Pressure transmission liquid
Silicone oil

Supply voltage
DC 12–36 V

Output signal
4–20 mA, 2-wire

Load
4–20 mA: $R_{max} = [(U_B - U_{Bmin})/0.02\ A]\ \Omega$

Current input
4–20 mA < 25 mA

Electrical protection
Short circuit proof and protected against reverse polarity

Electrical connection (degree of protection)
PUR cable (IP 68)
With integrated breather tube for reference to the ambient atmospheric pressure

Options
- ▪ Extended weight
- ▪ Measuring accuracy 0.1 % FSO
- ▪ FEP cable
- ▪ ATEX version

Accessories
- ▪ Screw connector kit
- ▪ Junction box
- ▪ Anchor clamp

Digital display units DA 10/12/14

1

- Grey display with excellent readability
- Text-based user interface
- Linearisation for volume indication (24 points)
- Scalable units, displayed as bar chart
- Integrated supply voltage for transducer

A

Page 86

1. Digital display unit DA 12
2. Signalling device
3. Pressure transducer DMU 07

Application
Universal application for electronic transducers for displaying measured values (DA 10), optionally with additional relay outputs (DA 12/14) for electronic transducers.

Description
Digital display unit in plastic housing for control panel mounting. With grey display and automatic off function for the backlight. The universal measurement input can be configured as a current input or a voltage input. Standard bearing charts for cylindrical horizontal tanks and spherical tanks are pre-programmed, additional units can be selected or set up. The units are scalable and shown as bar charts. Limit values can be displayed via a window and a trend function (rising/falling). With display message (flashing error text) if values are exceeded, parameter backup for restoring previous configurations and potentiometer for test purposes.

Technical specifications

Display
5-digit graphical LC display, backlit (white), text-based user interface, user interface language selectable (German, English, French, Italian), selectable units, custom units can be defined

Measuring range
± 99,999 digits (start and end values scalable as required)

Linearity
± 0.1 % of measuring range

Resolution
Decimal point position can be set as required

Response time
< 0.2 s

Operating temperature range
Ambient: 0/50 °C

Supply voltage
AC 50–253 V / DC 20–253 V
DC 2.5 W / AC 4.4 VA

Sensor supply
Integrated, galvanically isolated supply voltage for transducer: 17 VDC at 20 mA

Sensor input
All analogue standard signals,
e.g. 4–20 mA, 0–20 mA, 0–1 V, 0–10 V
as well as potentiometer

Analogue output
0/4–20 mA, galvanically isolated

Housing
Standard rack mounting housing
W x H x D: 96 x 48 x 135 mm

Panel cut out
W x H: 92 x 45 mm

Degree of protection (front)
IP 65 (EN 60529)

Electrical connection
Screw terminals, pluggable (1.5 mm^2)

Linearisation
Customer-specific linearisation with a max. of 24 points for the indication of volume (e.g. litres) in non-linear tanks. Bearing charts for cylindrical horizontal tanks and spherical tanks are pre-programmed.

Min./max. memory
The highest and lowest values reached during operation can be displayed.

Additional functions DA 12 / 14

Analogue output 2
0–10 V, galvanically isolated

Switching outputs
Relay contacts: 2 x (DA 12) / 4 x (DA 14) voltage-free changeover contacts (adjustable switching hysteresis)
Contact rating: AC 250 V, 2A, 100 VA

Level switches
Minimelder-R and Maximelder-R *enocean*®

- **For fuel oil EL, L, M, oil/water mixtures and many other media**
- **With visual/audible alarms, Acknowledge button and 1 relay**
- **Wall mounting housing for fast, professional mounting**
- **EnOcean®-ready**

A
Page 85

Application

Designed to signal minimum or maximum levels of water, heating oil EL, L, M, oil/water mixtures and neutral, non-viscous and non-adhesive liquids in tanks. System owners are alerted when the supply runs low or if there is a hazard of overfilling.

Description

Minimelder/Maximelder consist of a control unit and a height-adjustable float probe. The Minimelder probe is mounted in the bottom area of the tank and generates an alarm signal when the liquid level falls and the probe is no longer submerged in the liquid. The Maximelder probe is mounted in the top area of the tank and generates an alarm when the liquid reaches the probe. The liquid levels are adjustable. When these levels are reached, the units generate visual and audible alarms. The integrated relay can be used for transmission of the signal to external alarm equipment or for connection to telecommunication or building control systems.

Alarm units with the EnOcean-ready label can be integrated into your existing building automation systems at a later point in time. To do so, plug the EnOcean® wireless module TCM 320 into the EnOcean® interface (PCB of the device). The AFRISO gateway in conjunction with additional AFRISO products with EnOcean® wireless technology allow you to configure a whole range of fully customisable, extensible features for the protection of plants and buildings.

Level sensor chain

Is the battery tank facility protected against overfill damage?

Level differences at the beginning of or during the filling process are not an uncommon phenomenon; there are various reasons for this. If this effect occurs, the causes must be identified and removed as quickly as possible. Possible causes include an insufficient flow rate during filling, pollution in the filling or withdrawal systems or leaks. When conventional tank facilities are filled and the first tank filled is not equipped with a level sensor, there is a high risk of overfilling and fuel oil spills. Possible fatal consequences: damage to the building, soil contamination, environmental damage (groundwater), long-term odour problems and immense consequential costs. The owner or operator is fully responsible for all damages.

1 GWG level sensor connection fitting

2 Universal base unit, communicating

3 Universal extension, communicating

4 Wiring box

5 Level sensor

6 Float switch

7 Terminating plug current circuit

Universal withdrawing system
with GWG level sensor chain for protection against overfilling.

Function principle of GWG level sensor chain

The current circuit of the level sensor which is supplied from the tank vehicle during the filling process and which serves as a safety shut-off system includes float switches if the GWG level sensor chain is installed. A terminating plug at the last tank closes the current circuit. During normal filling, the filling process is terminated when the level sensor is submerged. However, if a tank of the facility without a level sensor reaches its maximum level first, the float switch stops the filling process just as if the level sensor had responded. The additional volume caused by the shut off delay and the content of the filling line is considered. Since the filling level of all tanks must be visually detectable or indicated by means of a level indicator, the tank that has caused the shut off is easy to identify.

AFRISO

Level sensor chain

GWG level sensor chain – the best protection against damage caused by overfilling

The AFRISO GWG level sensor chain is used to protect battery tank facilities against overfilling. The system is available for communicating and non-communicating tank facilities. The first tank – in direction of filling – is equipped with the level sensor officially required (system with filling from the top). With the GWG level sensor chain, each additional tank of the facility contains a float switch to limit the filling level; this level switch is connected to the wiring box of the first level sensor by means of pre-assembled cables and connectors. A terminating plug is connected at the last tank.

Universal withdrawal system with GWG level sensor chain in non-communicating system for three battery tanks with level sensor, level limiters and floating withdrawal. Available for retrofitting of existing systems and for new systems of virtually all well-known tank manufacturers.

Application example with Dehoust tanks: GWG level sensor chain as top filling system DE-A-01 with combined filling and vent line, withdrawal line, level sensor, level limiters and floating withdrawal.

Picture: DEHOUST GmbH

2

Universal withdrawing system with level sensor chain

FOR BIO-FUEL · FÜR BIO-ÖL 20%

- **Complete withdrawal system with level sensor chain**
- **Universal replacement for withdrawal systems of battery tank facilities**
- **Reliable protection against overfilling by means of monitoring of all tanks**
- **Level sensor with metallised sleeve for permanent operation even with biofuel/biodiesel**

Adapters for various tank connections

Application

Replacement for withdrawal system at battery tank facilities of almost all manufacturers. Depending on the version, available for communicating and non-communicating systems. One base unit per system and one extension for each additional tank. The level sensor chain is completely integrated.

Description

The base unit with the level sensor is mounted in the first tank (viewing in direction of filling). An extension is mounted in each additional tank of the battery tank facility. This applies to regular filling from the top. The level sensor and the level limiters are fully wired, the cables just need to be plugged in. The connector shipped with the base unit is plugged into the last extension. This closes the circuit. The connection cable to the level sensor fitting is connected in the junction box. The pipes for the withdrawal line can be connected with a diameter of 8 mm or 10 mm.
The connection pipes for the withdrawal line are not included. Adapters for the tank connections of tanks of virtually all manufacturers are included.

Technical specifications

Tank height
Up to 200 cm,
can be shortened as required

Connection thread (tank)
G1½
Enclosed adapters for tank connections:
G2, M60 x 4, S75 x 6, flange Ø 68 mm

Media
Fuel oil (DIN 51603-1)
Diesel fuel (EN 590)
with up to 20 % FAME each

Approval
GWG: CE as per EU Construction Products Regulation (EN 13616:2004)
GWG chain, level limiter: Z-65.17-182 (DIBt)

Scope of delivery
- Base unit: Floating withdrawal unit, wiring box, terminating connector, level sensor, adapters for tank connection
- Extension: Floating withdrawal unit, wiring box, float switch, connection cable, adapters for tank connection

i

See operating instructions for list of suitable tanks and tank connections.

Level sensor with metallised sleeve

With the GWG level sensors and the metallised sleeve, AFRISO offers maximum safety for the filling of tank facilities. In the case of conventional level sensors, a plastic sleeve provides mechanical protection of the PTC thermistor. The sleeve is open at the bottom and has a slot at the side so that the fuel oil can easily reach the PTC thermistor. However, the openings of the sleeve may get clogged due to the growth of microorganisms (such as bacteria and fungi) and an air cushion prevents the fuel oil from reaching the PTC thermistor. The rise in the use of biofuel with a certain percentage of FAME (fatty acid methyl ester) increases this risk. The higher the FAME content, the greater the water content in the fuel can be. This creates an environment even more susceptible to the growth of microorganisms. This may cause the level sensor to malfunction and ultimately disable the safety shut-off system. This may lead to overfill damage for which the owner/operator of the facility is liable.

Permanently reliable.

The metallised surface of the new sleeves and the new shape of the slot help to prevent the growth of microorganisms and improve the long-term reliability of the level sensor.

Level sensor GWG with metallised or stainless steel sleeve
Type	GWG 12 K/1	GWG 12 K/1C	GWG 12 K/MT	GWG 23-RO	GWG 23-WA	GWG 23-T
Application	For indoor tanks or plastic tanks, also battery tank systems.			For all indoor or outdoor tanks (aboveground or underground), except for battery tank systems.		
Media	Fuel oil EL (DIN 51603), diesel fuel (EN 590), FAME 100 % (EN 14214) as biofuel or biodiesel (up to 20 % FAME with GWG 12 K/1C)					
Approval	CE marking as per EC Construction Products Regulation 305/2011, EU 574/2014 (EN 13616:2004)					

Level sensors for indoor tanks

GWG 12 K/1
- Design as per EN 13616
- Metallised sleeve for permanent operation even with biopetroleum/biodiesel
- Universal use due to variable height adjustment
- Impact-resistant, shock-resistant and deformation-resistant GWG level sensor connection fitting (type 905 yellow)
- The right version for each application

GWG 12 K/1 with bracket

Application

To be used as part of an overfill alarm system to avoid overfilling of tanks. For battery tank systems, rectangular tanks welded on site and other indoor tanks. Suitable for use in flood hazard areas.

Description

PTC thermistor type level sensor consisting of probe, screw fitting, fitting for wall mounting as well as cable between probe and fitting. Watertight up to 10 m water column. Odour-tight. Metallised sleeve. The GWG level sensor connection fitting type 905 yellow is shock-resistant, impact-resistant and deformation-resistant. GWG 12 K/1 (bracket) with pre-mounted connection fitting type 905 made of grey plastic. The connection fitting is fixed to an aluminium bracket. The connection cable of the level sensor is factory-wired to the connection fitting. For tanks with direct filling (without filling pipe from the outside). See the ordering table for the available versions, fitting colours, probe and cable lengths. GWG filler cap type 906 (part no. 20430) can also be used.

GWG 12 K/1C (Euroflex 312)

GWG 12 K/MT

Description **Combination fitting exclusively for individual tanks.** PTC thermistor type level sensor consisting of probe, screw fitting, fitting for wall mounting as well as cable between probe and fitting. Watertight up to 10 m water column. Odour-tight. Metallised sleeve. The screw fitting is a withdrawal system Euroflex 312 with quick-action shut-off valve with connection for flow, return and measuring lines. The GWG level sensor connection fitting type 905 yellow is shock-resistant, impact-resistant and deformation-resistant.

PTC thermistor type level sensor consisting of mechanical level indicator MT-Profil R, probe, screw fitting, fitting for wall mounting as well as cable between probe and fitting. Watertight up to 10 m water column. Odour-tight. Metallised sleeve. The GWG level sensor connection fitting type 905 yellow is shock-resistant, impact-resistant and deformation-resistant.

Accessories for level sensors

GWG filler cap

Application For facilities that are operated with fuel oil EL or biofuel, diesel or biodiesel.
Suitable for flood hazard areas.

Description GWG filler cap with bayonet connection G2 with integrated level sensor connection fitting. Brass male coupling as per EN 14420-6. Filler cap made of oil- and weather-resistant plastic. Watertight up to 10 m water column. Lockable with standard padlock.

GWG filler cap

Cable extension fitting KVA

Application For 2-wire electrical cables (max. 42 V/4 A).
Suitable for flood hazard areas.

Description Clamp connections (gland) at both ends for cable diameters between 6 and 8.3 mm. Watertight up to 10 m water column.

Wire cross section: Max. 2.5 mm^2
Degree of protection IP 68 (EN 60529)

Level sensors
for outdoor tanks as per EN 13616:2004

2

Fittings for level sensors

1 Coupling plug type 902

2 Coupling socket type 903

3 GWG level sensor fitting for wall mounting type 905

4 Pipe fitting type 904 with flange plug type 901

Benefits
- The right version for each application
- Compact, corrosion-proof design
- Adjustable for different tank sizes
- Universal use due to variable height adjustment
- Yellow tube fitting made of impact-resistant plastic with ATEX approval (zone 0) and stainless steel sleeve
- Chemical resistance even if used with biodiesel, biofuel or admixtures up to 100 %
- Metallised sleeve of grey fitting for permanent operation even with biofuel/biodiesel
- Easy and fast installation

Level sensor GWG 23-Ro/T
for outdoor tanks as per EN 13616:2004

2
- ■ **For fuel oil EL, diesel fuel, biofuel/biodiesel and petrol**
- ■ **With metallised sleeve (with grey version) for permanent operation even with biofuel/biodiesel**
- ■ **Yellow fitting with ATEX type examination certificate (zone 0) and stainless steel sleeve**
- ■ **Variable height adjustment**
1 Probe length

Application

Part of a control chain for overfill alarm systems. The level sensor helps to prevent overfilling of tanks. For tanks as per EN 12285-1, 12285-2, DIN 6618, 6619, 6623, 6624, 6608, 4119 and tanks as per DIN 6620 and DIN 6625 or equivalent tanks. Suitable for the following media: fuel oil EL and diesel fuel as well as biofuel, biodiesel or petrol under certain conditions. See the operating instructions for additional information.

Description

PTC thermistor type level sensor consisting of height-adjustable probe and screw fitting. Pressure- and vacuum-tight. Watertight up to 10 m water column.

GWG 23-Ro with tube fitting made of **yellow plastic**, highly impact-resistant, deformation-resistant, with strong chain and flange gasket. Also suitable for petrol with **GWG level sensor sleeve made of stainless steel**.

GWG 23-Ro with tube fitting made of **grey plastic**. Suitable for the following media: fuel oil, diesel fuel, biofuel and biodiesel. **With metallised sleeve.**

GWG 23-T with telescopic tube for height adjustment of the connection fitting. Tube fitting made **grey plastic,** shock-resistant, with tie, without flange gasket. **With metallised sleeve.**

When selecting a level sensor, please check to see that the fitting is as close as possible below the access chamber cover – the distance should be no less than 20 mm and no more than 300 mm. See the operating instructions for the adjustment dimension in the tank.

Technical specifications

AFRISO

Level sensor tester GPG 01

- Intuitive operation by means of step by step instructions
- For all level sensors as per EN 13616:2004 design B1 or TRbF 511
- For liquids with a flash point of > 55 °C such as fuel oil, diesel and other liquid fuels or oils
- High-resolution TFT colour display and powerful lithium-ion battery for optimum readings and many measurements
- Robust protective sleeve with magnet for convenient, hands-free operation

Application

For full testing of level sensors which are not used in hazardous areas/potentially explosive atmospheres. It is possible to perform a simple electrical function test with the level sensor installed as well as a wet test with the level sensor uninstalled.

Description

Modern, robust housing with high-resolution TFT colour display and foil keypad with four keys and On/Off button. A 1.2 m connection cable with a coupling socket 903 for plugging in the level sensor is mounted at the top. A mini USB port for the power supply unit/battery charger is located at the bottom. The electrical function test displays the heat-up time in seconds and filling release. When a wet test is performed, the switch off time in seconds after submersion in liquid is indicated. At the end of the test, the full test result is displayed in the form of a summary. In the case of error messages and malfunctions, the display colour changes to red and a corresponding text is shown. If the device is not in use, it is switched off automatically; the charging function remains active.

Technical specifications

Operating temperature range
Ambient: 0/40 °C
Storage: -20/+50 °C

Hours of operation
Max. 38 hours

Weight
Approx. 360 g (device)

Dimensions
W x H x D: 66 x 143 x 37 mm
(without connection cable)

Connection level sensor
1.2 m connection cable with coupling socket 903

Display
TFT colour display, 2.8"
W x H: 45 x 60 mm

Supply voltage
Lithium-ion battery (3.6 V/2,350 mAh)
or power supply unit (USB)

Scope of delivery
Tester with coupling socket 903,
USB power supply unit, mini USB cable,
a protective sleeve with magnet, case, instructions

Level sensor testers
with connector 903 – suitable for all level
sensor fittings.

Level sensor testers
GPR 4 / ME 6

GPR 4

ME 6 / ME 6 P

Application
For fast and easy electrical function tests of level sensors. For use with storage tanks for fuel oils and diesel fuels. Not permitted for use in hazardous areas and not for level sensors which are installed in tanks containing hazardous media.

For genuine function tests of all level sensors built to EN 13616:2004 or TRbF 511.
ATEX type examination certificate.

Description
Simple level sensor tester with connector, suitable for all level sensor fittings. A signal lamp indicates function or error. Battery operation. Delivery with battery and level sensor connection fitting, also suitable for level sensor with brass fitting.

Level sensor tester with connector. The level sensor is heated up by the intrinsically safe current of the tester. The heat-up time and the switch-off time are measured, evaluated and shown on the touch display. Version ME 6 P also detects and displays the QSS coding (quality assurance system product code) of the level sensor. The device stores the measured data; they can be transmitted to a PC via a USB cable.

Technical specifications

Level sensor testers with connector 903 – suitable for all level sensor fittings.

Operating temperature range
Ambient: -20/+50 °C

Housing
W x H x D: 105 x 210 x 40 mm

Display
Touch display, 36 x 65 mm (W x H)

Degree of protection
IP 30

Supply voltage
4 x AA NiMH batteries (1.2 V / 2000 mAh)

Interfaces
USB-B

Scope of delivery
GWG level sensor tester with coupling socket type 903, USB charger, PC-software on USB flash drive in case

Transducer for overfill prevention system UFS 01 (WHG)

- **Compact, modern design**
- **With visual/audible alarms, Test and Acknowledge buttons**
- **2 relay outputs for additional alarm equipment, EMS, etc.**
- **Fail-safe, self-monitoring transducer for maximum reliability**
A Page 41
A Page 86

1 Pump

2

Application
To avoid overfilling of stationary tanks and stationary-use tanks.
Suitable for a wide range of flammable and non-flammable water-polluting liquids with a flash point > 55 °C.

Description
Type-approved together with all level probes type series 76 as part of an overfill prevention system. UFS 01 in a wall mounting housing consists of a transducer and a suitable level probe (to be ordered separately). The transducer contains all display elements and controls as well as all electronic components for signal processing and conversion of the level probe signal into a digital output signal. The level probe and the transducer are connected by means of a two-wire signal cable. When the maximum permissible level is reached, UFS 01 triggers visual and audible alarms. The transducer also features two output relays for switching tasks or connection of event reporting systems, the additional alarm unit ZAG 01 or additional equipment.
Ancillary control unit type 907-Z can be connected as an additional control unit to enable connection to a road tanker with overfill alarm system.

Media
- Fuel oil EL, biofuel
- Diesel/biodiesel mixtures
- Used gearbox oils and motor oils
- Unused motor oils, gearbox oils and hydraulic oils
- Transformer oil
- Hexanol 1
- Ethyl aceto-acetate (aceto-acetic ester)
- Acrylic acid 2-ethyl hexylene ester (2-ethyl hexylene acrylate)
- Cyclohexyl acetate, benzaldehyde
- Methyl aceto-acetate

- Nitrobenzene, 1.2 dichlorobenzene
- 2.4 dimethylaniline (N, N dimethylaniline)
- n octanol (n octyl alcohol)
- Diethyloxalate
- Aniline
- Vegetable oil (also as per EN 51605)
- Oil/water mixtures (e.g. drilling oil or lubricating oil)
- Perchloroethylene and trichloroethylene
- Antifreeze agents
- Cleaning agent/water mixtures
- AdBlue® (urea solution) as per DIN 70070

as well as comparable water-polluting liquids with identical heat conductivity with a flash point of > 55 °C.

Technical specifications

Operating temperature range
Ambient: -20/+60 °C

Supply voltage
AC 230 V or AC/DC 15–40 V
Power input: < 10 VA

Output relay
1 changeover contact / 1 normally open contact
(can be acknowledged)

Housing
Wall mounting housing made of impact-resistant plastic (ABS)
W x H x D: 100 x 188 x 65 mm

Degree of protection
IP 30 (EN 60529)

Weight
0.6 kg

Approval
DIBt: Z-65.11-193

Level probes for overfill prevention systems (WHG)

High temperature up to 80 °C

Application Level probe for transducers as part of an overfill prevention system for stationary tanks and stationary-use tanks used to store water-polluting liquids with a flash point of > 55 °C (see product description UFS 01 for list of substances).

Level probe type 76 A	Level probe type 76 AH
Description Approved as part of an overfill prevention system together with level transducers UFS 01 and NB 220 H. The level probe type 76 A consists of a probe tube with a stainless steel-encapsulated PTC thermistor sensor at the lower end, a junction box and a screw fitting. Tube length 100 to 3,000 mm in increments of 100 mm. Standard lengths up to 500 mm. The overfill prevention system must be set up in such a way that a sufficiently loud audible alarm is triggered when the maximum permissible level is reached.	Approved as part of an overfill prevention system together with level transducers UFS 01 and NB 220 H. The level probe type 76 AH consists of a probe tube with a stainless steel-encapsulated PTC thermistor sensor at the lower end, a junction box and a screw fitting. Tube length 100 to 3,000 mm in increments of 100 mm. Standard lengths up to 500 mm. The overfill prevention system must be set up in such a way that a visual alarm and a sufficiently loud audible alarm are triggered when the maximum permissible level is reached.

Transducer LS 500

Application

To avoid overfilling of stationary tanks and stationary-use tanks. Approved without list of substances for water-polluting liquids, also with flash point < 55 °C.

Description

Transducer with test button. Type-approved together with the level probes LS 300 EU, LS 300 FU or LS 300 ESPU as part of an overfill prevention system. The transducer supplies the level probe via an intrinsically safe circuit, evaluates the change in resistance of the PTC thermistor, continuously checks the PTC thermistor operation and monitors the system (power outage, short circuit, line interruption, etc.). Negative results cause the overfill prevention system to respond. The additional alarm unit ZAG 01 can also be connected.

The overfill prevention system must be set up in such a way that visual and audible alarms are triggered when the maximum permissible level is reached. The transducer must be installed outside of the hazardous area.

Technical specifications

Supply circuit
Supply voltage: AC 230 V
Power input: Max. 4 VA
(Supply voltage: DC 24 V
or AC 24 V at extra charge)
Output current circuit 1 voltage-free changeover contact
Sensor current circuit (intrinsically safe)
Voltage: < DC 15.8 V
Current: < 154 mA
Power: < 600 mW

Operating temperature range
-25/+50 °C

Housing (degree of protection)
Wall mounting housing (IP 40)
W x H x D: 75 x 150 x 110 mm

Approval
DIBt: Z-65.11-228

EC Type Examination Certificate:
TÜV 00 ATEX 1641 Ex II (1)G [Ex ia] IIC

Level probe LS 300 EU

Level probe for transducers as part of an overfill prevention system for stationary and stationary-use tanks. Suitable for installation in all tank versions. Approved without list of substances for water-polluting liquids, also with flash point < 55 °C.

Approved part of an overfill prevention system according to WHG together with the LS 500 transducer – self-monitoring and with automatic corrosion monitoring. LS 300 EU consists of a height-adjustable probe tube made of stainless steel with a PTC thermistor sensor element at the lower end, a screw fitting and a brass junction box with integrated overvoltage protection. Standard length 500 mm, max. length 3,000 mm. The level probe can be used in liquids up to 3 bar overpressure.

Material
Junction box: Brass, chrome-plated
Probe tube: Stainless steel 316 Ti
Screw fitting: Stainless steel 316 Ti
PTC thermistor: Stainless steel-encapsulated

Process connection
Screw fitting G⅜

Operating temperature range
Medium: -25/+50 °C

Degree of protection
IP 67 (EN 60529)

Approval
DIBt: Z-65.11-228

EC Type Examination Certificate:
TÜV 00 ATEX 1656X

AFRISO

PTC thermistor level controller RG 210

- **Compact control unit**
- **Universal application due to selectable functions**

Type 937

Example:
Daily-service tank for
fuel oil
1 Storage tank pump

Application

For use in electrically non-conductive liquids which are not viscous or adhesive, such as fuel oil, diesel fuel and media which are not corrosive.

Description

PTC thermistor type level controller with selectable functions:
- Level switch (1 probe)
- Level control for filling (2 probes)
- Level control for emptying (2 probes)

Level switch with 1 probe:
The relay switches in case of contact or loss of contact with the liquid. When the switch point is set, it must be observed that the PTC thermistor requires approx. 8 seconds to heat up depending on the ambient temperature.

Level control for filling with 2 probes:
Set internal switch to "fill". The relay energises after the min. probe has heated up. Relay de-energises when the max. probe comes into contact with the liquid.

Level control for emptying with 2 probes:
Set internal switch to "empty". Relay energises when max. probe has contact with the liquid. Relay de-energises when the min. probe loses contact with the liquid and heats up.

Technical specifications

Operating temperature range
Medium: -25/+55 °C
Ambient: -10/+55 °C

Probe
PTC thermistor probe, type 937
Cable length 3 m (max. 50 m)
Process connection G½, G1

Supply voltage
AC 230 V

Power input
12 VA

Relay contact (output)
1 changeover contact voltage-free

Housing (degree of protection)
Plug-in housing (IP 30)
W x H x D: 53 x 113 x 108 mm

Flexible PTC thermistor probe type 937
Flexible PTC thermistor designed for oils and other electrically non-conductive liquids (low-viscosity, non-adhesive). The PTC thermistor connection wires are not encapsulated. Not suitable for installation in humid environments.

i

Note: Not to be used as an overfill prevention system according to WHG. Requires the connection of an overfill prevention system according to WHG.

Professional equipment and convincing solutions for tank protection

With a comprehensive range of building technology products, AFRISO prides itself in "Making Heating Systems Safe". In addition to this extensive range, a large selection of alarm instruments for the fast detection of level, liquid spillage, leakage, gas or smoke is available.

Advantages – your benefits

- Complete range of products for professional tank protection from a single supplier
- Maximum protection against fuel oil accidents with brand products with approval for construction products
- Chemical resistance even if used with biodiesel, biofuel or admixtures
- Inner linings exactly made to size and ready for easy installation
- 10 years warranty on material and workmanship for plastic inner linings
- Fittings and devices ready to be installed, with all required mounting accessories
Leak protection lining

The installation of customised AFRISO leak protection linings turns single-walled steel tanks into double-walled tanks. Complex drip pans or collection facilities are no longer required. Oil cannot escape even if there is a leak in the outer tank wall. The Eurovac leak detector uses a vacuum in the interstitial space between the inner lining and the tank wall to monitor both walls for leaks. Malfunctions and leaks are immediately signalled.

AFRISO

3

Leak detectors and alarm units WATCHDOG-LINE
The uniform appearance not only ensures customer confidence,
but also underpins the professionalism of the specialised company.
Leak monitoring

Application areas
- Cylindrical steel or plastic
  (glass-fibre reinforced plastic)
  tanks
- Double-walled steel tanks
- Steel tanks manufactured on site
- Spherical tanks
- Tanks with inner lining
- Inspection ducts
- Oil storage rooms/collection
  facilities
- Containers, cisterns, cesspits

Media
- Fuel oil EL
- Diesel fuel
- Biofuel
- Biodiesel
- AHL
- AdBlue®
- Rainwater
- Other liquids

Oil tank conversion kits

If oil tanks can no longer be used or if the heating system is con-
verted to other types of energy or if old unused cesspits and cis-
terns are available, the containers can be equipped with a plastic
inner lining for rainwater harvesting and integrated into a rainwater
harvesting system.
Various conversion kits, inner linings and a complete range of
accessories are available.

Leak detectors LAS – sight glass principle

3

LAS 230

LAS 72

LAS 24 EK

Tilting valve closes vent if the tank tips over.
Application

For aboveground double-walled tanks containing water-polluting liquids. Application under atmospheric conditions for steel tanks and double-walled tanks with approval for leak detectors. Types LAS 24 E, LAS 39 E and LAS 72 E for all water-polluting liquids. Types LAS 24, LAS 39, LAS 72 and LAS 230 for water-polluting liquids with a flash point of > 55 °C.

Description

Leak detector for liquid systems consisting of a transparent acrylic glass cylinder, stainless steel housing covers and bottoms. Connection thread G1. Certification DIBt: Z-65.24-381.

Versions

Version E with wire mesh cylinder. LAS 24 EK for mobile tanks with tilting valve to protect against loss of leak detection fluid during transport and for venting on site. LAS 39 and 72 with G1 connection at the side for up to 4 additional containers with 4.5 litres each. The additional containers allow for leak detection at tanks with a greater interstitial space (see overview).

Overview LAS 72 with additional containers

AFRISO

Leak detector LAG-13 KR

Class II, EN 13160-1/-3

- ▪ **Version as per WHG and BetrSichV**
- ▪ **For monitoring of aboveground, double-walled tanks**
- ▪ **With fail-safe mode**

Page 51   Page 51

3

Application

For double-walled tanks with liquid in the interstitial space. For monitoring water-polluting liquids with a flash point of > 55 °C stored aboveground. Approved for all suitable tanks under atmospheric conditions.

Since July 2003, the LAG-13 KR leak detector may only be used for replacements of existing systems at underground, double-walled tanks as a result of the reclassification of water-polluting liquids in Germany!

Description

Leak detector class II (EN 13160-1/-3). The system consists of a control unit, a container for leak detection fluid (LAG container white) and a probe. Control unit with operating and alarm indicators, audible/visual alarm, test button and increased interference protection. The audible alarm can be muted with the Acknowledge button. The voltage-free relay contact is provided for connection of additional external alarm equipment (such as horns,) or an additional alarm unit ZAG 01. With fail-safe mode: Audible alarm if the probe fails. Suitable for panel mounting with a mounting frame; a sealing kit (IP 54) is available for rough application conditions. The LAG container serves as detection container and as expansion vessel at the same time. For aboveground tanks, the ratio between usable contents and total volume of leak detection fluid must be no more than 1:35. If the interstitial space has a greater volume, you must use additional containers.

LAG container white

LAG mounting kit

Description   For approved hydraulic mounting of leak detectors.

Leak detection fluid concentrate

Description   For use with leak detectors for double-walled tanks. Concentrate for mixing the leak detection fluid for the interstitial space. 10 l container with 4 l leak detection fluid Antifrogen N (BAM no: 1.3/9790-5.1/3436), can be mixed with water to 8 l at up to -30 °C or 10 l up to -25 °C. Please enquire for larger containers.

LAG mounting kit

Mounting frame and sealing kit

Description   Suitable for all wall mounting housings of the WATCHDOG-LINE alarm units series. Mounting frame for fast integration into control cabinet. Sealing kit for rough application conditions. The sealing kit is easy to mount between the housing cover and base. With this measure, the alarm unit reaches degree of protection IP 54 (not suitable for DTA 10/20 and RENA).

Vacuum type leak detector Eurovac

3

Your benefits

- Leak detector class I, EN 13160-1/-2
- Modern housing design, in line with WATCHDOG-LINE alarm unit series
- Large supply voltage range (AC 100–240 V) for worldwide application
- With power outage monitoring (with optional 9 V battery)
- Indication of pump operating time
- Low-noise operation
- Electronic pressure sensor for permanently stable switching points
- Drilling template included – for easy and fast installation
- Relay output for additional signalling devices, additional alarm units, event reporting systems or for integration into building control systems
- Version in protective housing (IP 55), available with heating and/or horn

Eurovac in protective housing with heating and horn

EnOcean-ready

Can be combined with **EnOcean®** **wireless module** **TCM 320** for integration into building automation systems.

Robust wall mounting housing with hole pattern – suitable for most standard vacuum type leak detectors

High energy efficiency: Economical, powerful DC motor with high starting torque

Hose connection (Ø 4/6 mm) for the pneumatic connection to the interstitial space of the tanks

Connection measuring line

Connection exhaust line

Connection suction line

Control panel with visual/audible alarms and Acknowledge button

Service indicator for annual maintenance

Supply voltage

Sintered plastic filter and condensate trap to indicate the current degree of pollution and to protect the pump

Vacuum type leak detector Eurovac NV

as per WHG and BetrSichV, EN 13160-1/-2, class I

enocean®

- **With visual and audible alarms, Acknowledge button and switching output**
- **High energy efficiency: Economical, powerful DC motor with high starting torque**
- **Service indicator for annual maintenance**
- **With power outage monitoring**

A — Page 55 A — Page 88
Application

Class I vacuum type leak detector according to EN 13160-1/-2 for safe monitoring of double-walled tanks and single-walled tanks with inner lining for the unpressurised storage of water-polluting liquids with a flash point > 55 °C, also AdBlue® (urea solution 32.5 %) according to DIN 70070 or other media (e.g. used hydraulic oil, cooling agent from grinding processes, etc). The broad voltage range (AC 100–240 V) allows for applications in a large variety of countries.

Description

Compact leak detector in a robust wall mounting housing with audible and visual alarms. The audible alarm can be muted with the Acknowledge button. Eurovac NV maintains a vacuum in the interstitial space of the tank in the low range. The vacuum pump is operated by an economical DC motor with a high starting torque (energy efficiency class AA++). Eurovac features a switching output for additional equipment (such as additional alarm unit ZAG 01) or integration into building control systems. The pump operating time can be displayed. Three hose connections (red, white, green) for the pneumatic connection to the interstitial space of the tank. The universal connection pieces can be used for 4 mm and 6 mm hoses.

With condensate trap to protect the electronics. Electrical connection from the top or from the bottom. An optional 9 V battery can be connected so that an alarm is triggered in the case of power outage. For outdoor applications, Eurovac NV is available in a protective housing (IP 55).

Alarm units with the EnOcean-ready label allow for wireless integration into a building automation system. To do so, plug the EnOcean® wireless module TCM 320 into the EnOcean® interface (PCB of the device). The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allow you to configure a whole range of fully customisable, extensible features for the protection of plants and buildings.

3

Liquid barrier

Application

For increased reliability and for the protection of vacuum type leak detectors.

Description

Liquid barrier with condensate trap for visual inspection, complete with fixing bracket for easy mounting to manhole cover. The liquid barrier is mounted directly into the suction line between the leak detector and the double-walled tank. The liquid carried in the suction line (condensate or, in the event of a leak, the medium or groundwater) is collected in the condensate trap of the liquid barrier. An integrated float shuts off the suction line if too much liquid is contained in the liquid barrier. The condensate trap can be easily unscrewed for emptying.

- Tightness-tested
- Compact, robust design made of high-strength plastic
- Compatible with hoses with 4/6 mm inside diameter

Technical specifications

Hose connection
Interchangeable Ø 4 or 6 mm

Housing
Plastic

Scope of delivery
- Liquid barrier with condensate trap
- Mounting bracket
- Hose connection Ø 4/6 mm

Condensate bar

For the protection of vacuum type leak detectors used on double-walled tanks to avoid ingress of condensate liquid into the device or clogging of hoses.

Condensate bar with three condensate traps for visual inspection, with integrated bracket for easy wall mounting. If there is no steady gradient in the measuring, exhaust and suction lines from the leak detector to the tank, a condensate bar must be mounted at each lowest point of the lines. When condensate forms, the liquid is collected in the relevant condensate trap. The condensate traps can be easily unscrewed for emptying.

- Tightness-tested
- Compact, robust design made of high-strength plastic
- Compatible with hoses with 4/6 mm inside diameter

Hose connection
Ø 4 and 6 mm

Housing

Tank protection package AK-S for fuel oil and diesel – Inner linings with complete accessories

as per EN 13160-7

3
Application
For fuel oil EL (DIN 51603-1), diesel fuel (EN 590) and biofuel as well as biodiesel with up to 20 % FAME.

Description
Tank protection package for standardised cylindrical tanks. Enquire for rectangular and spherical tanks.

Certification
CE as per European Construction Products Regulation ((EU) No 305/2011 and No 574/2014), EN 13160-1:2003, EN 13160-7:2003
DIBt: Z-65.30-162

Scope of delivery
- Leak protection lining according to standard or made to size
- Vacuum type leak detector Eurovac
- Front wall lining made of fleece LSV2
- Intermediate layer made of fleece
- Mipoplast plate 800 x 800 mm
- Condensate bar triple 4/6 mm
- Liquid barrier 4/6 mm
- Angled nipple short 4/6 mm

- Angled nipple long 4/6 mm
- PVC suction line 3 x 6 mm perforated and not perforated
- Fastening ring 500 mm or 600 mm
- Hose connector 4 or 6 mm
- T piece hose connection 4 or 6 mm
- Hose connector kit G⅜ x G⅛ x G⅛
- Warning sign with holder and felt overshoes

Inner linings AF-S for the storage of liquid fertiliser AHL, AdBlue®

3
① Measuring line
② Leak detector Eurovac
③ Exhaust line
④ Liquid barrier
⑤ Suction line/suction line perforated
⑥ Inner lining
⑦ Intermediate layer (fleece)
⑧ Fastening ring

Application
For liquid fertiliser AHL and urea solution 32.5 % AdBlue®.
Enquire for other liquids.

Description
Plastic inner linings, blue, with Technical Approval of the German Institute for Civil Engineering (DIBt) for cylindrical standard tanks and rectangular or spherical tanks. Made of PVC film WP6120, 0.8 mm thick.

When AdBlue® is stored, the surface temperature must not exceed 35 °C!

Certification
DIBt: Z-65.30-483

AFRISO

Inner linings AR-S for rainwater harvesting

3
Application

When old heating oil storage tanks are taken out of service, for example due to corrosion, or if the heating system is converted to other types of fuel, the existing tanks can be used to collect rainwater. For integration into a rainwater harvesting system, the tank is cleaned and then fitted with a special inner lining suitable for water. The old, standardised manhole cover (Ø 500 mm) is replaced with a plastic cover specially designed for rainwater harvesting.

Description

Plastic inner linings for rainwater tanks. For hygienic sealing of cylindrical or rectangular tanks to be used in rainwater harvesting systems. Please enquire for inner linings for spherical tanks, cisterns, cesspits and other containers. It is advisable to install a vacuum type leak detector to monitor the rainwater storage tank for tightness, but this is not mandatory in the case of cylindrical tanks.

Rainwater inner lining AR-SM with magnets

- **Operation without vacuum type leak detector, no pressure, no current**
- **Easy and fast installation by means of powerful neodymium magnets**
- **Perfectly fitting, robust PVC lining**

A

Page 307

Application

For conversion of cylindrical steel DIN tanks such as decommissioned fuel oil tanks, diesel tanks or storage tanks into reliable, high-grade rainwater storage tanks. No pressure or flow required. The rainwater inner lining AR-SM with magnets is suitable for storing rainwater in cylindrical steel tanks (3,000 to 50,000 litres).
Please note: In the case of coated steel tanks, verify that the attractive force of the magnets is sufficient.

Description

The rainwater inner lining AR-SM with magnets allows owners to convert a decommissioned steel tank into a rainwater storage tank with very little effort.

The rainwater inner lining AR-SM is a PVC lining with flat, round, extremely powerful neodymium magnets welded into lateral and top areas. The lining is reliably held at the inner wall by the magnets - no pressure or power supply are required inside the tank. A tank can be conveniently converted into a rainwater storage tank: First, the tank is measured and then a precisely fitting lining is manufactured. The tank is prepared on the basis of a defined procedure (thorough cleaning of the tank, corrosion checks, etc.); then, a fleece layer is placed on the tank floor for impact protection.

Then the lining is fitted in the steel tank and inflated by means of a blower; if necessary, the final fit is achieved by means of a vacuum pump. When the PVC lining is inflated, the magnets click into place at the inner wall exactly where planned. The fit of the PVC lining is checked and then it is fastened in the manhole by means of a fastening ring. The tank is ready for storing rainwater immediately after the lining and the piping connections have been installed.

Scope of delivery

Rainwater inner lining AR-SM, made of plastic film Sikaplan® WP5140-08 black, film thickness 0.8 mm, for closed tanks, with all neodymium magnets welded into the film in the lateral and top areas, with film flange for the standard fastening ring.

i

Not only cylindrical DIN steel tanks, but certain steel tanks with different geometrical shapes can be converted into rainwater storage tanks.
Please enquire separately.

i
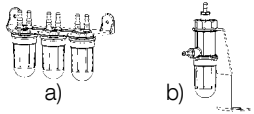

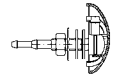

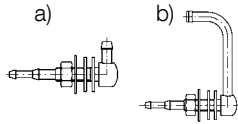

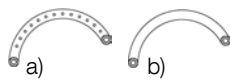

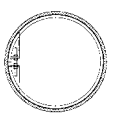

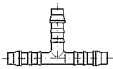

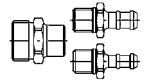

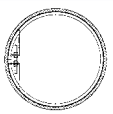

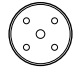

Depending on the local conditions and on the tank, a fleece lining may be required in the bottom area of the tank as an impact protection. Different dome distances and special dimensions are manufactured at the same conditions.

Pressure type leak detector Europress
as per WHG and BetrSichV, EN 13160-1/-2, class I

enocean®

- **With visual and audible alarms, Acknowledge button and switching output**
- **Pump operating time can be displayed**
- **Service indicator for annual maintenance**
- **With power outage monitoring**

Page 88

Europress in protective housing

Energy A+

Application

Class I pressure type leak detector as per EN 13160-1/-2 for safe monitoring of suitable double-walled tanks for unpressurised storage of numerous water-polluting liquids, also AdBlue® (urea solution 32.5 %). The flexible voltage supply (AC 100–240 V) allows for application in a large variety of countries.

Description

Compact leak detector in a robust wall mounting housing with audible and visual alarms. The audible alarm can be muted with the Acknowledge button. Europress indicates the pump operating time and features a switching output for additional equipment (such as additional alarm unit ZAG 01) or integration into building control systems. The pump operating time can be displayed.
Three hose connections (red, white, green) for the pneumatic connection to the interstitial space of the tank. The universal connection pieces can be used for 4 mm and 6 mm hoses. With condensate trap to protect the electronics. Electrical connection from the top or from the bottom. An optional 9 V battery can be connected so that an alarm is triggered in the case of power outage. For outdoor applications, Europress is available in a protective housing (IP 55).
Alarm units with the EnOcean-ready label can be integrated into your existing building automation systems at a later point in time. To do so, plug the EnOcean® wireless module into the EnOcean® interface (PCB of the device). The AFRISO home gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allow you to configure a whole range of fully customisable, extensible features for the protection of plants and buildings.

Technical specifications

Operating temperature range
Ambient: -5/+50 °C
In protective housing with heating: -25/+50 °C

Supply voltage
AC 100–240 V

Nominal power
< 10 VA

Switching output
Relay contact: 1 voltage-free changeover contact

Contact rating
Max. 250 V, 2 A, resistive load

Operating pressure
Interstitial space: approx. 510 mbar

Housing
Wall mounting housing made of impact-resistant plastic (ABS)
W x H x D: 202 x 230 x 70 mm
Degree of protection: IP 30 (EN 60259)

Alarm sound
Min. 70 dB(A)

Certification
CE-marking as per EC Construction Products Regulation 305/2011, EU 574/2014, EN 13160-1/-2 and ÜHP

CHAPTER 4

Alarm units, probes and signalling devices

4

Alarm units for fast detection of levels, accumulations of liquids, leakage, gases or smoke

4

WATCHDOG-LINE – for maximum safety

1. Oil/water alarm unit OM 5 with EnOcean® wireless module TCM 320 for integration into smart home systems

2. Photoelectric probe for tank room monitoring

3. Photoelectric probe with drip pan

4. Wireless smoke alarm Funk ASD 10

5. Digital tank contents indicator DTA 20 E (wireless)

In the building technology sector, there are many risks which should be monitored to avoid annoyance to home owners, janitors, property managers or maintenance personnel and to avert extensive damage. WATCHDOG-LINE alarm units report undesirable events, danger and emergency conditions early so that immediate measures can be taken.

The WATCHDOG-LINE devices excel with easy and intuitive operation. A large variety of probes and sensors enable fast detection of liquid levels, leakage and accumulations of liquids, gases or smoke. Integrated visual and audible alarms provide the appropriate signals in hazard conditions. For remote signalling and easy integration into AFRISO smart home systems, the devices are ready for the installation of an EnOcean® wireless module. This way, the persons in charge can be notified of an alarm condition - whether or not they have a mobile device. Residential buildings, factories and facilities are protected and monitored.

From standard wall mounting to integration into control cabinets using mounting frames – WATCHDOG-LINE alarm units are easy and quick to install. With very little effort, the devices can also be retrofitted with seal kits for use in rough dirty and wet environments (IP 54).

DIN rail clip for fast and easy mounting of the alarm units.

Fast integration into control cabinets by means of mounting frames.

With seal kit IP 54 for rough application conditions.

AFRISO
WATCHDOG-LINE alarm units

- **Audible and visual alarms for maximum safety**
- **Additional signalling devices (ZAG 01, horn, warning light) can be connected**
- **Ready-to-connect device for easy installation and commissioning**
- **High reliability and long service life**

4

Typical application areas

- Collection facilities below oil and water consuming equipment
- Drip pans below storage tanks, burners or motors in buildings or outdoors
- Containers, barrels and tanks/ double-walled tanks
- Sewage tanks
- Cisterns and water storage tanks
- Drinking water installations
- Oil depots, boiler rooms and rooms with mains water connection
- Heating systems
- Cable and pipe ducts

- Canal shafts, manholes and inspection ducts
- Cellars, kitchens, laundry rooms
- Warehouses and storage areas
- Machinery rooms
- Museums, archives, office buildings
- Lift shafts
- High-tech equipment rooms and server rooms
- Pumping stations and control rooms
- Catchment and overflow basins
- Flood hazard areas
- Oil, petrol and grease separators
- Protective pipes and pipelines

Detectable media
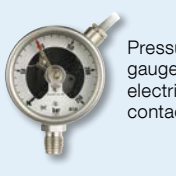

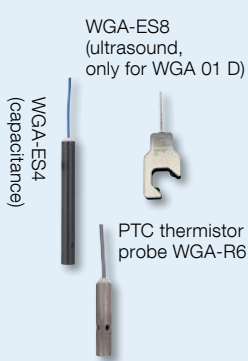

- Water, waste water, groundwater
- Heating circuit water
- Cooling water
- Rainwater
- Fuel oil EL, L, M
- Diesel fuels or low-viscosity lubricating oils class A III
- Motor oils, gearbox oils and hydraulic oils
- Vegetable oils and transformer oils
- Beverages
- Antifreeze agents and fertilisers

- Emulsions
- Sludge, sand
- Oil, petrol and grease layers
- Conductive water mixtures and liquids
- Gases, vapours, smoke
- Many other liquids with a flash point of > 55 °C

i

Pluggable EnOcean® wireless module TCM 320 for WATCHDOG-LINE PCBs, can be ordered separately for EnOcean-ready products.

WATCHDOG-LINE alarm units
Leak detection in tank and heating rooms with ÖWWG 3.

When the maximum level in the catchment basin is reached, the WWG alarm unit controls the draining process by means of a connected pump.

AFRISO Smart Home: Monitoring and control of domestic equipment, apartments and buildings for function and leaks with the AFRISOhome gateway. Interconnected sensors, actuators and alarm units increase safety and convenience. Application examples: Heating systems, laundry rooms, basements, utility rooms and drinking water installations.

Warning system (water leaks, flooding) for complete buildings with central alarm CoFox®.

AFRISO

Oil/water alarm unit ÖWWG 3

Class III, EN 13160-1, -4

enocean®

- **For storage rooms, manholes, drip pans**
- **With visual/audible alarms, Test/ Acknowledge buttons and relay output**
- **Self-monitoring probe**
- **EnOcean®-ready**

A — Page 85
A — Page 86
A — Page 88

4

Applications

For visual and audible alarms of liquids with a flash point of > 55 °C are detected in, for example, oil storage rooms, drip pans, inspection ducts, ducts, protective pipes, manholes, pipes and cellars, however, not in wet rooms and humid rooms. Suitable for the following media: water, fuel oil, diesel fuel or low-viscosity lubricating oils, motor oils, hydraulic oils, vegetable oils and transformer oils, antifreeze agents, oil-water mixtures and emulsions. Use as leak detection system class III as per EN 13160-1/-4 and as leak detection system as per TRWS 791-1/-2.

Description

The oil/water alarm unit in a wall mounting housing triggers visual and audible alarms in the event of accumulations of liquids which can be caused by tank leaks, backflow, flooding, etc. ÖWWG 3 consists of a control unit with visual/audible alarm, Test and Acknowledge buttons as well as a flexible PTC thermistor probe. The probe is mounted at the lowest point of the area to be monitored. Alarm is triggered when there is contact with escaped liquid. The audible alarm can be muted with the Acknowledge button. The visual alarm remains active until the leak has been removed. The Test button allows you to simulate an alarm condition in order to perform a function check. The self-monitoring probe triggers an alarm if it is damaged. The voltage-free relay contact is provided for connection of additional alarm equipment (such as additional alarm unit ZAG 01). ÖWWG 3 is suitable for panel mounting with a mounting frame. A sealing kit (IP 54) is available for rough application conditions. Alarm units with the EnOcean-ready label can be integrated into your existing building automation systems, for example, AFRISO smart home, at a later point in time. To do so, plug the EnOcean® wireless module into the EnOcean® interface (PCB of the device).

Technical specifications

Oil/water alarm unit ÖWWG 3 with burner connection kit

enocean®

- Connection pre-wired
- With visual/audible alarms, Test and Acknowledge buttons
- Automatic switching off of the burner in alarm conditions
- EnOcean®-ready

A

Page 85

4

Application

For visual and audible alarms in the event of accumulations of liquids below the burner of an oil fuelled system and for switching off the burner in alarm conditions. Suitable for the following media: water, fuel oil and diesel fuel.

Description

The ÖWWG 3 oil/water alarm unit consists of a control unit with visual/audible alarm, Test and Acknowledge buttons as well as a flexible PTC thermistor probe. Cable and connector for connection of burner and boiler are fully wired and ready to be connected. In the event of an alarm, the unit triggers visual and audible alarms and switches off the burner. The audible alarm can be muted with the Acknowledge button. The visual alarm remains active until the leak has been removed. The burner then resumes operation. The Test button allows you to simulate an alarm condition in order to perform a function test. Alarm units with the EnOcean-ready label can be integrated into your existing building automation systems, for example, AFRISO smart home, at a later point in time. To do so, plug the EnOcean® wireless module into the EnOcean® interface (PCB of the device). The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allow you to configure a whole range of fully customisable, extensible features for the protection of plants and buildings.

AFRISO

Oil/water alarm unit OM 5

Class III, EN 13160-1, -4

- **For storage rooms, manholes, drip pans, double-walled tanks**
- **With visual/audible alarms, Test/ Acknowledge buttons and relay output**
- **Self-monitoring probe**

Monitors up to 5 tanks

Page 85

Page 86

Page 88

4

Application

For visual and audible alarms if liquids with a flash point of >55 °C are detected. OM 5 is suitable for the following media: Fuel oil, diesel fuel or low-viscosity lubricating oils, motor oils, gearbox oils or hydraulic oils, vegetable oils and transformer oils, water and other liquids.
Use as leak detection system class III as per EN 13160-1/-4 and as leak detection system as per TRWS 791-1/-2.

Description

The unit in a wall mounting housing triggers visual and audible alarms in the event of accumulations of liquids which can be caused by tank leaks, backflow, flooding, etc. OM 5 consists of a control unit with visual/audible alarm, Test and Acknowledge buttons as well as a relay output. Up to five photoelectric probes can be connected. The probes are mounted at the lowest point of the object to be monitored. Alarm is triggered when there is contact with escaped liquid. The audible alarm can be muted with the Acknowledge button. The visual alarm is cleared once the leak has been fixed. The Test button allows you to simulate an alarm condition in order to perform a function test.
The voltage-free relay contact is provided for connection of additional alarm equipment (such as additional alarm unit ZAG 01, horn). The alarm units are suitable for panel mounting with a mounting frame. A sealing kit (IP 54) is available for rough application conditions.

Empty probe for retrofitting of photoelectric probes in battery tanks.
OM 5/1 with additional probe for detection of minimum levels, e.g. in fuel oil tanks.

Technical specifications

Oil/water alarm unit ÖWU

enocean®

- **Combination probe for determination of leaking medium oil and water**
- **For storage rooms, manholes, drip pans and pumps**
- **With fail-safe mode**
- **With visual/audible alarms, Test/ Acknowledge buttons and relay output**
A — Page 85
A — Page 86
A — Page 88

Application

For visual and audible alarms if liquids with a flash point of > 55 °C are detected. Suitable for the following media: water, fuel oil, diesel fuel or low-viscosity lubricating oils, motor oils, gearbox oils or hydraulic oils, vegetable oils and transformer oils.

Description

Alarm unit in wall mounting housing for early detection of accumulations of liquids. ÖWU consists of a control unit with visual/audible alarm, Test and Acknowledge buttons, two relay outputs as well as a combination probe with photoelectric and conductivity sensors. An integrated microprocessor determines whether the detected medium is oil or water. The probe is mounted at the lowest point of the object to be monitored. Alarm is triggered when there is contact with escaped liquid. The audible alarm can be muted with the Acknowledge button. The visual alarm is cleared once the leak has been removed. The Test button allows you to simulate an alarm condition in order to perform a function test. The two voltage-free relay contacts are provided for connection of additional external alarm equipment or additional alarm units; e.g. 1 relay for water alarm and 1 relay for oil alarm. ÖWU features a "fail-safe" mode. The alarm units are suitable for panel mounting with a mounting frame. A sealing kit (IP 54) is available for rough application conditions.

Alarm units with the EnOcean-ready label can be integrated into your existing building automation systems, for example, AFRISO smart home, at a later point in time. To do so, plug the EnOcean® wireless module into the EnOcean® interface (PCB of the device). The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allow you to configure a whole range of fully customisable, extensible features for the protection of plants and buildings.

- **Alarm unit on conductivity principle**
- **With visual alarm, Test and Unlock pushbuttons**
- **Relay output for additional alarm**

A
Page 85

A
Page 88

AC 230 V

4

Application

For visual and audible alarms in the event of oil layers on water. Especially suitable for catchment basins, floods and inspection ducts.

Description

Alarm unit in wall mounting housing for the detection of oil layers on water. ÖAWD consists of a control unit with visual/audible alarm, Test/Unlock buttons as well as a relay output. ÖAWD is based on the conductivity principle. The floating probe SWS is used for detection. If an oil layer (of at least 2 mm) is detected, the alarm unit triggers a visual alarm and stores the alarm condition. Once the cause of the alarm condition has been removed, press the Unlock button to reset ÖAWD. The visual alarm is deactivated. The Test button allows you to simulate an alarm condition in order to perform a function test. The voltage-free relay contact is provided for connection of additional signalling equipment (such as ZAG 01), actuators (pumps, valves), additional alarm units or event reporting systems. The alarm units are suitable for panel mounting with a mounting frame. A sealing kit (IP 54) is available for rough application conditions. ÖAWD-8 is available for applications with turbulent surfaces; this version features a delay of approx. 8 s which helps to avoid false alarms.

Technical specifications

Operating temperature range
Medium: 0/50 °C
Ambient: 0/55 °C

Probe SWS
2-rod electrode, encapsulated cable connection
W x H x D: 200 x 140 x 200 mm
Cable length: 10 m
Adjustment range: 2/10 mm oil layer thickness
Also suitable for changing levels

Fuel oil alarm HMS in connector housing

4

- **Immediate switching off of monitored devices in the event of a leak alarm**
- **With visual alarm**
- **Ready-to-connect device for fast and easy installation**

Application

For the detection of oil in drip pans below oil-consuming systems, oil pumps, pumping or control stations. Suitable for the following media: water, fuel oil, diesel fuel, motor oils, machine oils, hydraulic oils and similar. Liquids with a flash point of > 55 °C.

Description

The HMS fuel oil alarm unit consists of a transducer and a photoelectric probe. Devices to be monitored are connected directly to the socket of the transducer. If there is no leak, the green lamp is on. If the probe detects unwanted liquid, the alarm unit triggers a visual alarm (red lamp) and the socket in the transducer is automatically switched off.

Technical specifications

Operating temperature range
Ambient: -10/+60 °C

Photoelectric probe
Probe head: Polyamide
Cable: 2 m

- **With visual/audible alarms, Test and Acknowledge buttons and 2 relay outputs**
- **With floor probe or wall mounting rail probe**
- **EnOcean®-ready**

A	A	A
Page 85	Page 86	Page 88

4
Application

For visual and audible alarms in the event of accumulations of electrically conductive liquids such as rainwater, tap water, fresh water, waste water, cooling water and heating water.

Description

Alarm unit in wall mounting housing for the detection of even the smallest amounts of water caused by, for example, backflow due to clogged water pipes, water ingress from outdoors, broken pipes or failure of a waste water pump. WWG 1 consists of a control unit with visual/audible alarm, Test and Acknowledge buttons, two relay outputs as well as a special floor probe. The probe is mounted at the lowest point of the object to be monitored. Alarm is triggered when there is contact with escaped liquid. The audible alarm can be muted with the Acknowledge button. The visual alarm is cleared once the leak has been removed. The Test button allows you to simulate an alarm condition in order to perform a function test.

The two voltage-free relay contacts are provided for connection of additional external alarm equipment or alarm units. One relay can be acknowledged (e.g. for an external horn), the other relay cannot (e.g. for an external lamp, a solenoid valve, a pump). The alarm units are suitable for panel mounting with a mounting frame. A sealing kit (IP 54) is available for rough application conditions.

Alarm units with the EnOcean-ready label can be integrated into your existing building automation systems, for example, AFRISO smart home, at a later point in time. To do so, plug the EnOcean® wireless module into the EnOcean® interface (PCB of the device). The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allow you to configure a whole range of fully customisable, extensible features for the protection of plants and buildings.

Water alarm unit WWG 2 like WWG 1, but with height-adjustable wall mounting rail probe.

Technical specifications

Operating temperature range
Ambient: -5/+55 °C

Floor probe BWS 10-1
Response level approx. 2–3 mm
Dimensions Ø 70 mm

Wall mounting rail probe WSS
Height-adjustable by approx. 200 mm
W x H x D: 37 x 320 x 55 mm

Standard probe cables
1.5 m, max. length 50 m (shielded)

Function principle
Conductivity measurement

Supply voltage
AC 100–240 V

Nominal power
2.5 VA

Switching output
1 voltage-free changeover contact
1 voltage-free normally open contact
(can be acknowledged)

Contact rating
Max. AC 250 V, 2 A

Alarm sound
Min. 70 dB(A)

Leak detectors CoFox®
ELT 500/4, ELT 8

4

Application For the detection of electrically conductive liquids such as water, emulsions or waste water.

Alarm unit CoFox® ELT 500/4

Description Alarm unit in wall mounting housing with visual alarm, operation indicator, reset button and relay output for additional external signalling equipment or the additional alarm unit ZAG 01. A total of 4 probe circuits can be connected. Leak location by means of LEDs. When the probe comes into contact with liquid, The alarm is triggered and the connected alarm equipment is activated. The alarm can be acknowledged with the Reset button. ELT 500/4 features four channels for separate probe circuits so that several probes can be operated in parallel or cascading for large-area monitoring is possible.

Water alarm unit CoFox® ELT 8

Water alarm unit in wall mounting housing with visual alarm, operation indicator as well as two relay outputs for additional external signalling equipment or the additional alarm unit ZAG 01. The probe is mounted at the lowest point of the object to be monitored. The alarm is triggered when the probe comes into contact with liquid and ELT 8 activates the connected alarm equipment. The visual alarm is cleared once the leak has been removed. ELT 8 enables parallel operation of several probes.

Technical specifications

Operating temperature range
Ambient: -10/+50 °C

Response threshold
50 kOhm

Switching output
Relay output: 1 voltage-free changeover contact

Visual indication
Green LED: Mains operation
4 red LEDs: Alarm condition

Supply voltage
AC 230 V

Probe connections
4 probe circuits

Contact rating
Max. AC 250 V, 2 A

Nominal power
3 VA

Housing
Wall mounting plastic housing
W x H x D: 53 x 113 x 108 mm
Degree of protection: IP 30 (EN 60529)

Operating temperature range
Ambient: -10/+60 °C

Response threshold
Fully adjustable, 2.5 kOhm – 60 kOhm

Switching output
Relay output: 2 voltage-free changeover contacts

Visual indication
Green LED: Mains operation
Red LED: Alarm condition

Supply voltage
AC 230 V or DC 24 V

Probe connections
1 probe circuit (several probes can be connected in parallel)

Contact rating
Max. AC 250 V, 2 A

Nominal power
4 VA (230 V) / 2 VA (24 V)

Housing
W x H x D: 53 x 113 x 108 mm
Degree of protection: IP 30 (EN 60529)

AFRISO

Gas alarm unit GS 1.1

- **For private homes**
- **Detection of, for example, natural gas (methane) and liquefied gas (propane, butane) in ambient air and generation of gas alarm**

Application example
30-40cm
max 5m
1 Methane

4

Application

For the detection of flammable gases such as methane, propane, butane in ambient air in residential buildings.

Description

Gas alarm unit with integrated semiconductor sensor and alarm buzzer. LEDs for operation (green), alarm (red), error (yellow), the Test button and the Reset button are located at the front side of the housing. The alarm is triggered when approx. 20 % of the lower explosion limit (LEL) is reached. The audible alarm can be muted with the Reset button. The visual alarm remains active until the alarm condition no longer exists (reset).

Technical specifications

Supply voltage
AC 230 V

Housing
W x H x D: 158 x 90 x 44 mm
Degree of protection: IP 20 (EN 60529)

Operating temperature range
Ambient: 0/50 °C; max. 75 % r.h.

Alarm value
Approx. 20 % LEL

Alarm tone
Internal buzzer, min. 50 dB(A)

Service life
Approx. 5 years

i

GS gas alarm units are cross-sensitive to hydrocarbons, lacquers, solvents, alcohols and similar media.

Gas alarm units for the private home

With relay for external Sensor

4

Gas alarm unit GS 2.1

Application

For the detection of flammable gases such as methane, propane, butane in ambient air in residential buildings.

Description

Gas alarm unit with integrated semiconductor sensor, alarm buzzer and relay output for connection of additional external alarm equipment (e.g. horn, warning light). LEDs for operation (green), alarm (red), error (yellow), the Test button and the Reset button are located at the front side of the housing. The alarm is triggered when approx. 20 % of the LEL (lower explosive limit) is reached. The audible alarm can be muted with the Reset button. The visual alarm remains active until the alarm condition no longer exists (reset). The unit features an additional input for connection of an external gas sensor GS 4.1 as a second measuring point, e.g. for monitoring different rooms.

Technical specifications
Application example   ① Propane

30-40cm

max 5 m

Supply voltage: AC 230 V

Housing
W x H x D: 158 x 90 x 44 mm
Degree of protection: IP 20 (EN 60529)

Operating temperature range
Ambient: 0/50 °C; max. 75 % r.h.

Alarm value: Approx. 20 % LEL

Audible alarm: Internal buzzer, min. 50 dB(A)

Service life: Approx. 5 years

External gas sensor GS 4.1

Additional gas sensor to be used with the gas alarm unit GS 2.1. Enables monitoring at two points in different rooms.

Remote probe for gas alarm unit GS 2.1. Audible alarm is triggered by the gas alarm GS 2.1.

Detectable gases: Methane, propane, butane. LEDs at the sensor indicate the operating and alarm state of the gas alarm system:

- LED green: Operation
- LED yellow: Error
- LED red: Gas alarm

Measured gas
Flammable gases and vapours in ambient air.

Measuring range
0–50 % LEL

Measuring principle
Semiconductor (service life approx. 5 years, depending on the operating conditions)

Supply voltage: Via GS 2.1

Housing
W x H x D: 80 x 80 x 36 mm
Degree of protection: IP 20 (EN 60529)

Operating temperature range
Ambient: 0/50 °C
             max. 75 % r.h.

Alarm value: Approx. 20 % LEL

Service life: Approx. 5 years

AFRISO

Gas detector GM 2.1

- **For early detection of natural gas (methane) and liquefied gas (propane, butane)**
- **Audible and visual alarms, Acknowledge button and relay output**
- **Self-monitoring for line interruption, short circuit and sensor defect**

A
Page 82

A
Page 85

4

Application

For continuous monitoring for explosive gases and vapours and for generating alarms in conjunction with the appropriate sensors. GM 2.1 is installed in heating rooms and basements, storage, office and residential buildings to increase safety. Not suitable for installation in hazardous areas (EX areas).

Description

Alarm unit in a wall mounting housing with audible and visual alarms. GM features an alarm threshold and is equipped with a relay contact. If the threshold value is exceeded, the unit generates an alarm. The red LED lights up, the audible alarm goes off and the alarm relay switches. The audible alarm can be muted with the Acknowledge button. When the alarm condition no longer exists, you press the Acknowledge button again to clear the visual alarm (alarm memory). The alarm can only be cleared with the Acknowledge button if the cause of the alarm has been removed. If the concentration still exceeds the alarm threshold, pressing the Acknowledge button does not clear the alarm. The voltage-free relay contact allows you to switch additional external signalling equipment such as the event reporting system EMS, horns and lamps in the case of alarm or error conditions. GM is suitable for control panel mounting with a mounting frame. A DIN rail clip is available for fast and easy mounting of GM to standard rails (DIN rail/EH50022). A sealing kit (IP 54) is available for rough application conditions.

GM 2.1 can be combined with suitable gas sensors:
- 1 gas sensor (methane or propane/butane)
- 2 gas sensors, also for different gases (methane and/or propane/butane)

Technical specifications

Inputs
2 sensors
Connection cable 3 wires
Wire cross section > 0.5 mm²

Distance control unit – sensor
Max. 150 m

Alarm threshold
1 permanently installed alarm threshold for alarm at approx. 20 % LEL with alarm memory

Indication
1 green LED: Operation
1 red LED: Flashing: error
                 Steady on: alarm

Audible alarm
Piezo buzzer approx. 70 dB(A), can be acknowledged

Switching outputs
Relay contacts: 1 voltage-free changeover contact
Contact rating: AC 250 V, 2 A

Supply voltage
AC 230 V

Power input
15 VA

Operating temperature range
Ambient: 0/40 °C

Housing
Wall mounting housing made of impact-resistant plastic (ABS)

Gas sensors for GM 2.1, test gas bag for gas alarm unit/sensors

4

Gas sensor GS 4.1

Test gas bag PGT 10 for gas alarm units/sensors

Description
Semiconductor gas sensor in plastic housing for connection to gas detector GM 2.1. To be used in dry rooms (e.g. heating facilities). Detectable gases: methane, propane, butane. LEDs at the sensor indicate the operating and alarm state of the gas alarm system:

- LED green: Operation
- LED yellow: Error
- LED red: Gas alarm

For checking and servicing gas alarm systems during function tests and system checks. Nylon bag case with test gas cap and withdrawal unit MiniFlo (valve, flow meter with stainless steel float for gas flow regulation from 0.5–1.5 l/min and test gas hose). Can accommodate 1 to 3 test gas cylinders.

Calibration gas not included in scope of delivery; please order separately.

Technical specifications

Measured gas
Flammable gases and vapours in ambient air. Gas sensors are cross-sensitive to hydrocarbons, lacquers, solvents, alcohols and similar media.

Measuring range
0–50 % LEL

Measuring principle
Semiconductor (service life approx. 5 years, depending on the operating conditions)

Operating temperature range
Ambient: 0/50 °C

Humidity
Max. 75 % r.h.

Housing
Wall mounting plastic housing
W x H x D: 80 x 80 x 36 mm
Weight: Approx. 100 g

i

Gas sensor calibration
Prior to shipment, the gas sensors are calibrated and documented to the gas specified by the customer. Therefore, please always indicate the gas type when ordering.

Probes for alarm units

Floor water probe BWS 10-1

Application For the detection of conductive liquids such as flood water, rainwater, tap water, fresh water, waste water, cooling water and heating water.

Description Floor probe suitable for WWG 1, ELT 8, ELT 680 and ELT 500/4. The probe is mounted at the lowest point of the object to be monitored. The alarm is triggered by the alarm unit when the probe comes into contact with liquid.

Probe diameter: 70 mm
Cable length: 2 m
Response level: approx. 2–3 mm

Floor water probe BWS 10-1

4

Wall mounting rail probe WSS

Application For the detection of conductive liquids such as rainwater, tap water, fresh water, waste water, cooling water and heating water.

Description Height-adjustable wall mounting rail probe suitable for WWG 2, ELT 8, ELT 680 and ELT 500/4. The probe is mounted to the wall at the object to be monitored. The desired response level (distance from probe to floor) is adjusted via the wall mounting rail. The alarm is triggered by the connected alarm unit when the probe comes into contact with liquid.

Dimensions: 37 x 320 x 55 mm
Cable length: 1.5 m
Height-adjustable: by approx. 200 mm

Wall mounting rail probe WSS

Floating probe SWS

Application For the detection of oil layers, emulsions or foam on water. Also suitable for changing levels (e. g. flowing bodies of water).

Description Floating probe suitable for ÖAWD-8, ELT 8 and ELT 680. The probe floats on the water surface. The oil layer thickness (at least 2 mm) is set via the height-adjustable 2-rod probe. The alarm is triggered by the connected alarm unit when the probe comes into contact with the oil layer.

Dimensions
W x H x D: 200 x 140 x 200 mm

Cable
Encapsulated cable connection
Length: 10 m

Adjustment range
2/10 mm oil lay er thickness

Probes and accessories for alarm units

PTC thermistor probe

Application For the detection of liquids with a flash point of > 55 °C. Suitable for the following media: water, fuel oil, diesel fuel or low-viscosity lubricating oils, motor oils, hydraulic oils, vegetable oils and transformer oils, antifreeze agents, oil-water mixtures and emulsions.

Description Suitable for ÖWWG 3. The probe is mounted at the lowest point of the object to be monitored or in the drip pan. The alarm is triggered by the alarm unit when the probe comes into contact with liquid.

Probe diameter: 14 mm
Cable length: 3.2 m or 10 m
Response level: 17 mm

PTC thermistor probe

Photoelectric probe

Application For the detection of liquids with a flash point of > 55 °C. Suitable for the following media: water, fuel oil, diesel fuel or low-viscosity lubricating oils, motor oils, gearbox oils or hydraulic oils, vegetable oils and transformer oils.

Description Floor probe suitable for oil/water alarm unit OM 5. The probe is mounted at the lowest point of the object to be monitored. The alarm is triggered by the alarm unit when the probe comes into contact with liquid.

Probe diameter: 10 mm
Cable length: 10 m
Response level: 5 mm

Photoelectric probe

EnOcean® wireless module TCM 320

Application For remote indication and easy integration of WATCHDOG-LINE alarm units into smart home systems (such as AFRISO smart home) based on EnOcean® wireless. Users with mobile devices can immediately take appropriate action in response to an alarm.

Description EnOcean® wireless module for WATCHDOG-LINE alarm units. Can be plugged into PCBs of boards which are factory-equipped with a slot for the EnOcean® wireless module. Can be integrated into all AFRISO products with the label "EnOcean-ready" on the front.

Accessories for alarm units

Drip pan

Application
For the collection of, e. g., escaping oil. Drip pans should be mounted below all oil fittings such as filters, oil vents, burners, etc. in order to avoid damages resulting from escaping oil and in order to detect leaks as early as possible.

Description
Drip pan made of white plastic (PE).
At the lowest part of the drip pan, the sensor of an oil alarm unit can be installed, e. g. the oil alarm unit ÖWWG 3.
If the drip pan cannot be checked on a daily basis, oil alarms with audible and visual alarms are required.
Several independent drip pans can be monitored, e. g. with a single oil alarm unit OM 5 and up to 5 probes. A mounting clamp for the sensor is supplied with the drip pan.

Dimensions (W x D): 600 x 300 mm

Drip pan

Mounting frame

Description
Mounting frame for wall mounting housings
100 x 188 x 65 mm (W x H x D) of the WATCHDOG-LINE alarm units from year of manufacture 10/2007.
For fast integration in control cabinets.

Mounting frame

Sealing kit (IP 54)

Description
Sealing kit for rough application conditions. Suitable for all wall mounting housings of the WATCHDOG-LINE alarm units from year of manufacture 10/2007, with the exception of tank contents indicators DTA 10/20 and backup controller RENA. The sealing kit is easy to mount between the housing cover and base. This increases the degree of protection of the alarm unit to IP 54.

Sealing kit (IP 54)

DIN rail clip

Description
DIN rail clip for fast and easy mounting of WATCHDOG-LINE alarm units in the control cabinet or for side-by-side mounting of several units on the wall. The clip is mounted by means of screws so that the alarm unit can be clipped onto standard DIN rails.

DIN rail clip

4

- ▪ Audible and visual alarms for maximum safety
- ▪ Manufacturer-independent use with devices with switching output (relay contact)
- ▪ With 2 voltage-free changeover contacts (at output side)
- ▪ Ready-to-connect device for easy installation and commissioning

Page 53

Page 49

Page 85
❶ Additional alarm unit ZAG 01
❷ Leak detector LAG 13
❸ LAG container with probe

Application

For indication and transfer of alarm signals from WATCHDOG-LINE alarm units, AFRISO leak detectors or any other switching equipment. Suitable for triggering additional visual and audible alarms in buildings, e.g. in the case of underground tank facilities or in rooms which are far away from the dangerous location. Can be connected directly to the switching output of the alarm unit.

Description

The additional alarm unit in a wall mounting housing signals alarm conditions in conjunction with an alarm unit or a leak detector. ZAG 01 is connected to the voltage-free contact of the alarm unit. A 230 V alarm input is also available. The audible alarm can be acknowledged with the Acknowledge button in the case of an alarm. The visual alarm is cleared once the leak or event has been removed. The Test button allows you to perform a function test.

The voltage-free relay contacts allow for connection of additional external signalling equipment (such as horns), event reporting systems EMS, building control systems or similar equipment. ZAG 01 is suitable for panel mounting with a mounting frame. A sealing kit (IP 54) is available for rough application conditions.

AFRISOhome gateway
Wireless automation

AFRISO smart home:
Intelligent alarm units, sensors and actuators for building automation

5

Customised building automation
with AFRISO smart home

Safety means more comfort –
the intelligent, energy-saving building with AFRISO smart home

AFRISO has been manufacturing alarm units for the safe operation of tank facilities and heating systems for more than 60 years. So far, alarms were mainly signalled directly on site. Transferring alarm messages to building control systems was possible, but it involved considerable effort. The wireless transmission standard EnOcean®, available for domestic technology since 2003, breaks new ground for a completely different approach to building automation. The transmission protocol allows a whole range of different products to be networked on the basis of EnOcean® wireless. This technological milestone breaks new ground for building automation not only in new buildings – reasonably priced intelligent networking becomes possible in existing buildings. Products with an EnOcean® wireless module do not require cable connections to a building control centre and can be used almost anywhere in buildings due to their compact design.
Manufacturers from a great variety of areas have teamed up in the EnOcean® Alliance and offer a large range of products. With the smart home system, AFRISO has developed a portfolio of outstanding sensors and alarm units for reliable leakage protection (for example, water/oil) as well as devices for controlling heating systems in an economical way. AFRISO smart home products are cost-effective, reliable and practical.
Even for end customers, there are no more barriers to entry into the networked world of customised, modularly extensible building automation and security systems. The perfect approach to a flexible smart home solution.

No cables.
No cables are required for building automation systems on the basis of the EnOcean® wireless technology. Ten metres of power cable (NYY 3 x 1.5 mm) weigh approx. 2.3 kg – not using this cable saves money and is great for the environment.

No batteries.
Energy harvesting is the foundation of battery-less, maintenance-free and flexible building automation. The energy required for sending messages is derived from ambient sources – small movements, pressure, light, temperature or vibration are sufficient to allow for power-independent operation of the sensors.

No limits.
Renovation projects and new buildings benefit from the new, creative and innovative developments based on EnOcean® wireless technology. There are countless ways of combining EnOcean® products.

A fully featured smart home system on the basis of EnOcean wireless technology networks all light, heating and air conditioning control systems via a central gateway. The gateway processes sensor and consumption data, triggers control action and initiates other measures, and transmits the information to mobile devices such as smartphones, tablets, etc. via WLAN or Internet. Products from other members of the EnOcean® Alliance for controlling household appliances can also be integrated.

Mechanical water sensor WaterSensor eco

enocean®

- Flexible location-independent use anywhere in buildings
- No battery, no cables required
- Wireless transmission without power supply in the case of state transitions

A	A	A
Page 98	Page 118	Page 116

Battery-less sensor system: Fibre disks generate the energy to signal events
5

Application
For the detection of accumulations of water at defined horizontal surfaces or positions (e.g. below pipes, fittings and in the area of washing machines, below bath tubs or dishwashers, in utility rooms or basements). Suitable for water.

Description
WaterSensor eco is equipped with fibre disks that work as a sensor; it does not require an additional power supply. In the case of a leak, the fibre disks expand and generate the required power to send the event message to WaterControl or to the AFRISOhome gateway. The event message is sent when the fibre disks expand or shrink. WaterControl can be used, for example, to shut off the water pipe to keep further water from escaping. The AFRISOhome gateway transmits alarm messages and state transition messages via WLAN or LAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts); the message includes information on which WaterSensor eco has signalled the state transition. The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to config-ure a whole range of fully customisable, extensible applications.

Immediate leakage detection
via conductivity sensor surface

5

Application
For the detection of accumulations of water at defined horizontal surfaces or positions (e.g. in the area of fittings washing machines, coffee makers with water connection, etc.). Suitable for water.

Description
WaterSensor con features a conductivity sensor at the bottom. The energy required to send an EnOcean® telegram is generated by means of an integrated photovoltaic cell. An optional battery can be used for application in darker rooms. An extension cable is available for separate mounting of sensor and wireless transmitter. WaterSensor con cyclically transmits the actual ambient temperature and the logical state of the conductivity sensor (conductive liquid present or not present) and also sends a telegram when the state changes via the integrated EnOcean® wireless module to the water valve WaterControl or to the AFRISOhome gateway.
WaterControl can close the water pipe in response to an event message to keep further water from escaping. The AFRISOhome gateway transmits alarm messages and status messages via WLAN or LAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts); the message includes information on which water sensor has signalled the state transition.
The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

Water valve WaterControl 01.1 with wireless control

enocean®

NEW

- ▪ **Immediate shutting off of the water pipe in the case of a leak**
- ▪ **Reduced damage after pipe burst**
- ▪ **Shut-off valve with modular design, removable motor and ball valve with additional screw connection for easy mounting, also if mounting space is limited**

| A Page 95 | A Page 96 | A Page 118 |

5

Application

For manually or remotely controlled closing and opening of a water pipe in buildings in response to an event message from the water sensors WaterSensor eco, con or BWS.

Description

WaterControl 01.1 consists of a shut-off valve and a control unit with power supply and an EnOcean® wireless module. The shut-off valve features a drinking water-approved ball valve with an electric motor which is integrated in the water-carrying pipe. Two ball valves (G1 male / G1½ male) with corresponding screw connections for G¾ female and G1 female / G1¼ female and G1½ female are available. There several ways to open and close the shut-off valve in the water pipe:
- ▪ Opening/closing the shut-off valve mechanically via the operating handle
- ▪ Opening/closing the shut-off valve electrically via buttons at the control unit
- ▪ Closing the shut-off valve via water sensors
- ▪ Opening/closing the shut-off valve via EnOcean® switch
- ▪ Opening/closing the shut-off valve via AFRISOhome gateway and smartphone

The control unit has a permanent wireless connection to the water sensors WaterSensor eco or WaterSensor con or WaterSensor BWS and/or the AFRISOhome gateway. An event message is triggered if the water sensors detect a leak, e.g. caused by a defective household appliance or a water pipe burst. WaterControl 01.1 can be used, for example, to shut off the water pipe to keep further water from escaping. The AFRISOhome gateway transmits alarm messages and state transition messages via WLAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts).

Technical specifications

Operating temperature range
Ambient: 0/50 °C
Storage: -10/+80 °C
Medium: 4/80 °C

Supply voltage
AC 100–240 V

Nominal power
Motor at standstill: < 2 VA
Motor running: < 5 VA

Housing
Wall mounting housing made of impact-resistant plastic (ABS)
W x H x D: 100 x 188 x 65 mm
Weight: 430 g
Degree of protection: IP 40 (EN 60529)

Ball valve (DVGW-tested) with motor
Weight: 800 g to 2 kg
Degree of protection: IP 40 (EN 60529)

EnOcean® wireless
EEP: D2-A0-01
Frequency: 868.3 MHz
Transmission power: Max. 10 mW
Range: 10 to 30 m (depending on room arrangement and materials in the building)

Devices to teach in
Teach in of up to 40 devices:
- ▪ 1 EnOcean® centre/gateway
- ▪ WaterSensor con (20 x)
- ▪ WaterSensor eco (10 x)
- ▪ WaterSensor BWS
- ▪ EnOcean® rocker switch open/close (10 x)
- ▪ Water alarm unit WWG in any combination

Temperature and pressure measuring instrument TDM 51 F

enocean®

- Ideal for measuring a great variety of values and parameters in domestic technology applications
- Pressure and temperature sensors can be connected
- Integrated mains voltage monitoring
- EnOcean®-inside

A — Page 118

A — Page 116

5
Application

For measuring pressure and temperature in domestic technology applications such as filling pressure in the heating system, level in fuel oil tanks or cisterns, layer temperature in hot water storage tanks or system temperatures (e.g. flow, return).

Description

The temperature and pressure measuring instrument TDM 51 F features five inputs for Pt 1000 temperature sensors and an RS 485 Modbus connection for digital temperature sensors. The measured data is transmitted to the AFRISOhome gateway HG 01 via an integrated EnOcean® wireless module. The measured data is visualised on the AFRISOhome application. If the measured value is out of range, groups of persons (e.g. owner or janitor) can be notified selectively. TDM 51 F monitors the mains voltage and sends an alarm message in the case of a power outage. EnOcean® wireless technology allows for integration into building control systems.

Technical specifications

Operating temperature range
Ambient: -5/+55 °C

Supply voltage
AC 100–240 V

Digital tank contents indicator DTA 20 E

- **Plug & play level indicator for smart home systems based on EnOcean® wireless**
- **Daily measurement and worldwide access to consumption data**
- **Local display and push message (adjustable) when minimum level is reached**
- **For fuel oil, (bio) diesel, water and other media with a density between 0.5 and 1.5 g/cm³**
A	A	A	A
Page 116	Page 118	Page 10	Page 128

Application

Location-independent level measurement with digital display and minimum level signal (reserve level alarm). If the product is operated in conjunction with the AFRISOhome gateway, the tank operator/owner can read the level on a mobile device in addition to the local display. Suitable for tanks up to 400 cm liquid level. For fuel oil EL, L or diesel fuel, FAME 100 % as biodiesel (EN 14214) and water (no drinking water!) and for AdBlue®. In addition, DTA 20 E can be used for level measurement with all non-corrosive liquids with a density from 0.5 to 1.5 g/cm³. Remote measurements (measuring line) up to 15 m.

Description

The electro-pneumatic tank contents indicator DTA 20 E consists of a control unit with power supply unit, an EnOcean® wireless module, a digital display and a measuring line. Measured values are displayed in litres, % and liquid level (cm). Simple operation and setup via three function keys at the device. DTA 20 E measures the level (adjustable interval) and transmits it to the AFRISOhome gateway via EnOcean® wireless. In addition, measurements can be taken by means of pressing the control key (Push-to-Read function). If the level falls below a minimum level that is freely adjustable as a percentage, the backlight of the display flashes red to indicate an alarm during the measurement. In addition to indication on the local display, the tank owner/operator can receive a push message on the smartphone or tablet. Standard tank shapes (linear and cylindrical, horizontal) are stored.

Technical specifications

Functions
Periodic level measurement (1 to 240 hours) with wireless transmission to master systems such as AFRISOhome gateway
Push-to-Read level measurement

Measuring range (tank height)
0/400 cm (fuel oil)
0/350 cm (water)

Measuring accuracy
±3.0 cm

Operating temperature range
Ambient: 0/50 °C
Storage: -20/+65 °C
Medium: 0/50 °C

Display
Multi-coloured, backlit
graphical display (30 x 50 mm):
- White = Operation
- Red = Alarm
- Green = Setup

Indication of litres (5 digits),
% or liquid level in cm

Measuring line
PVC hose 4 x 1 mm
Length 20 m
Balance chamber stainless steel

Supply voltage
AC 100–240 V

Minimum alarm
Backlight flashes red
Push message to mobile devices

Wireless smoke alarm ASD

enocean®

- Immediate triggering of an alarm before a flue gas concentration becomes hazardous
- Wireless transmission, cyclically (function check) and in the case of state transitions
- Compact, unobtrusive design
- Design as per EN 14604

A — Page 118
A — Page 116

5
Application

For detection of fumes and smoke gas in living spaces. Audible alarm when a defined smoke concentration is exceeded.

Description

The photoelectric smoke alarm ASD consists of a sensor head and a mounting base with integrated EnOcean® wireless module. The sensor head features a permanently installed lithium battery with a service life of up to 10 years for reliable, long-term fire protection. A fire alarm is indicated by an alarm tone with approx. 85 dB and a flashing LED. The alarms are transmitted via the EnOcean® wireless module. In addition, ASD 10 transmits the ambient temperature. A photovoltaic cell generates the required energy. A battery can be inserted in the base for use in darker environments.

Wireless smoke alarm ASD 10 with transmission of fire alarm and current room temperature.

Wireless smoke alarm ASD 20 with transmission of fire alarm and battery state of the mounting base for the EnOcean® wireless module.

The AFRISOhome gateway lets you program a great variety of scenarios for an alarm, for example switching on the lights for the escape route, opening of shutters for escaping, push messages, etc.
The EnOcean® wireless module is not only used for transmission, but also for regular function checks.

Technical specifications

Operating temperature range
Ambient: 0/+40 °C
Storage: -20/+60 °C
Max. humidity, non-condensing

Supply voltage
Sensor head: Permanently installed lithium battery
Base: Energy harvesting (via photovoltaic cell) or 1/2 AA lithium battery, DC 3.6 V (with daylight less than 200 lx)

Housing

Wireless heat detector AHD

enocean®

- **Immediate triggering of an alarm if the temperature rises rapidly and if it exceeds 58 °C**
- **Wireless transmission, cyclically (function check) and in the case of state transitions**
- **Compact, unobtrusive design**
- **Design as per EN 54-5 class A1/R**

A
Page 118

A
Page 116

5
Application

For detection of heat and fire in living spaces. Audible alarm and direct transmission to the AFRISOhome gateway if the temperature rises rapidly or if it exceeds 58 °C. AHD is ideal for use in rooms subject to generation of smoke or vapour (such as kitchens, bathrooms) or in which dust, dirt and exhaust gases can develop (such as workshops, garages). Recommended if smoke alarms cannot be used due to possible false alarms.

Description

The heat detector AHD consists of a sensor head and a mounting base with integrated EnOcean® wireless module. The sensor head features a permanently installed lithium battery with a service life of up to 10 years for reliable, long-term fire protection. A fire alarm is indicated by a flashing LED and a sound sequence with the maximum alarm sound pressure of 85 dB. The alarm is also transmitted via the EnOcean® wireless module. A photovoltaic cell generates the required energy. A battery can be inserted in the base for use in darker environments. Each heat detector has a unique ID so that the recipient can distinguish the individual heat alarms if multiple sensors are used. The AFRISOhome gateway lets you program a great variety of scenarios for an alarm, for example switching on the lights for the escape route, opening of shutters for escaping, push messages, etc. The EnOcean® wireless module is not only used for transmission, but also for regular function checks.

Single room temperature controller CosiTherm® Wireless

enocean®

- Controller terminal bar for connection of actuators
- For manifold systems for heating and cooling
- Worldwide access via AFRISOhome gateway
A	A	A	A
Page 118	Page 116	Page 106	PAge 220

5

Application

Controls the temperature of individual rooms in connection with manifold systems for heating or cooling. EnOcean® wireless technology for integration into building automation systems.

Description

The base version of the single room temperature controller CosiTherm® Wireless consists of a base module, at least one controller module with two or six independent control circuits and a corresponding number of room temperature sensors. The controller modules can be interconnected in a modular way to account for the number of control circuits/rooms. One room temperature sensor is required per control circuit; the standard version is battery-less and connected to the controller module via the EnOcean® wireless technology. The room temperature sensor measures the actual temperature in the room. The reference temperature is adjusted via the rotary knob of the room temperature sensor or via the app AFRISOhome. The controller module compares the actual temperature and the reference temperature and controls the volume flow of the heating/cooling water via the thermostatic actuators of the manifold system.

The base module features two independently programmable switching channels for temperature reduction, nine programmable memory blocks and a valve and pump protection function. The additional pump running time is adjustable. The terminals of the controller modules are colour-coded for easy assignment to the wires of the thermostatic actuators; in conjunction with the DIN rail snap connectors at the rear of the housing, this facilitates installation.

With an AFRISOhome gateway, it is possible to remotely check and, if necessary, adjust the room temperatures via the AFRISOhome app (for example, when coming back from winter vacation). This flexible remote control of the room temperature combines multiple benefits: You can increase living comfort and reduce energy costs.

In conjunction with additional AFRISO smart home products with EnOcean® wireless technology, the user can configure a whole range of fully customisable, extensible applications.

Functions

Base module BM
- Power supply of the thermostatic actuators (AC 230 V)
- Switchover of the system to "Heating" or "Cooling"
- Control of the heating/cooling pumps

Controller module
- Comparison of actual and reference temperatures
- Control of heating/cooling water via connected thermostatic actuators
- Connection of two or six control circuits, extensible
- Connection to room temperature sensors via EnOcean® wireless technology

winner

5

Application

Determination of the actual ambient temperature and adjustment of the reference value for the room temperature.

Description

The room temperature sensor FT transmits the actual ambient temperature as well as the reference room temperature via the integrated EnOcean® wireless module to the single room temperature controller CosiTherm® Wireless or to the AFRISOhome gateway. The room temperature sensor FTF also transmits the current humidity value. The reference value for the room temperature is adjusted by means of the integrated rotary knob.

The actual temperature in rooms with an underfloor heating system is compared to the reference temperature on an ongoing basis. If there is a difference, the single room temperature controller CosiTherm® Wireless adapts volume flows of the heating/cooling water via the thermostatic actuators of the manifold system. The energy required to send reference temperature and actual temperature values is generated by means of an integrated photovoltaic cell; it is also possible to use a standard battery. The AFRISOhome gateway transmits alarm messages and changes in temperature and/or humidity via WLAN or LAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts); the message includes information on which room temperature sensor has signalled the change. The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

5

Application Determination of the ambient temperature and air humidity at a defined location.

Description The temperature sensor FTM T transmits the current ambient temperature via the integrated EnOcean® wireless module to the AFRISOhome gateway. The temperature and humidity sensor FTM TF also transmits the value of the current air humidity.
Based on the event message, the AFRISOhome gateway can trigger measures. The energy required to send a wireless telegram is generated by means of the integrated photovoltaic cell. An optional battery can be used for application in darker rooms. The ambient temperature can be readjusted via the single room temperature controller CosiTherm® Wireless in order to keep the room temperature from rising or falling. The AFRISOhome gateway transmits alarm messages and changes in temperature and/or humidity via WLAN or LAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts); the message includes information on which temperature sensor has signalled the change.
The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

A — Seite 109

FTM 20 TF with base and triangular cover

5

Application

Wireless sensor for determination of the ambient temperature and air humidity at a defined location and transmission to AFRISOhome gateway.

Description

The temperature sensor FTM 20 TF measures the ambient temperature and the humidity at regular intervals. Significant changes of the sensor data are immediately transmitted to the AFRISOhome gateway; they can be used as parameters to control actuators such as the radiator actuators AVD 30 or extractor fans with EnOcean wireless technology.

The energy required to send a wireless telegram is generated by means of the integrated photovoltaic cell. The integrated energy storage module allows for several days of operation even in total darkness. In permanently dark environments (such as basements or warehouses) it is also possible to use a button cell battery.

A double-sided adhesive strip allows for extremely easy mounting of the compact housing to walls or furniture. It is possible to plug on a metal plate which serves as a base for placing the sensor on a shelf, a window sill or a sideboard.

The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

Bidirectional wireless radiator actuator AVD 30

enocean®

- **Battery-less control of radiators**
- **Maintenance-free without additional operating costs**
- **Connection M30 x 1.5: Easy replacement of existing thermostat heads**
- **Low-noise operation**

A
Page 113

A
Page 118

A
Page 116

5
Application
For wireless and battery-less temperature control in individual rooms. Ideal for heating, ventilation and air conditioning systems. Adjustments are made exclusively via the AFRISOhome app or via a central operating unit.

Description
Wireless, bidirectional radiator actuator AVD 30 based on EnOcean® wireless with integrated frost protection function. AVD 30 requires no batteries; to generate the energy required for operation and communication between the AFRISOhome gateway it uses the temperature difference between the room and the radiator. An internal energy storage module helps to prevent conditions with insufficient energy supply during operation. If the energy storage module is empty, the actuator opens the radiator valve by 50 % and switches to idle state. Once a sufficient volume of heating water flows, AVD 30 starts automatically and resumes controlling the room temperature. In sparely heated rooms, it may be necessary to charge the energy storage module via the integrated micro USB port; the actuator triggers a corresponding alarm on time.

AVD 30 controls, for example, the room temperature in a room with radiators. For this purpose, the actual temperature is measured directly at the actuator or with an additional room temperature sensor. The reference temperature can be set, for example, via the AFRISOhome app in combination with an AFRISOhome gateway. The actual temperature and the reference temperature are compared in the AFRISOhome gateway and necessary change requests are transmitted to the actuator at regular intervals. Additional configurable conditions can be included in the temperature control (for example, temperature reduction if a window is open or in the case of absence). This flexible control of the room temperature combines multiple benefits: you can increase living comfort and reduce energy and operating costs.

Technical specifications

Flexible use in buildings due to
integrated mains plug.

5

Application

For continuous monitoring of the carbon dioxide (CO$_2$) concentration in the ambient air. Application in rooms in which many persons work, study or live and where carbon dioxide levels may consequently be elevated. High concentrations of carbon dioxide in the ambient air reduce the ability of persons to concentrate and perform. Ideal for educational institutions, training/meeting rooms, office areas and household.

Description

CO$_2$ sensor with infrared technology in plastic housing, for connection to a standard CEE socket. The CO$_2$ concentration in the room air is indicated directly at the device by a colour scale:

- LED green: No ventilation required
- LED yellow: Ventilation recommended
- LED red: Ventilation required

The version CO$_2$ sensor F (with EnOcean® wireless module) sends the measured values to the AFRISOhome gateway for further processing and initiation of appropriate action. For example, it is possible to start a room ventilation system in order to reduce the CO$_2$ concentration. The current carbon dioxide concentration is also displayed by the app AFRISOhome. The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.
Version CO$_2$ sensor: Version without wireless transmission as stand-alone solution.

Connection cable for easy device connection

5

Application Monitoring of the switching states of voltage-free contacts. In addition, transmission of ambient temperature.

Description The universal wireless transmitter can integrate any device with a voltage-free contact into a building automation system. Examples comprise the alarm relays of heating systems or status messages of alarm systems. The voltage-free contact is supplied with voltage by the universal wireless transmitter. A defined recipient is immediately notified of each state transition is via EnOcean® wireless. The universal wireless transmitter is used as a transmission unit for many AFRISO probes such as Minimelder or Maximelder, pressure gauges with electrical contact, etc. The energy required to send the message with the state transition is generated by means of an integrated photovoltaic cell; it is also possible to use a battery in dark rooms. The AFRISOhome gateway transmits alarm messages and state transition messages via WLAN or LAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts); the message includes information on which universal wireless transmitter FTM has signalled the state transition.

The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications:

- Floor water probe (for water detection)
- Minimelder (for signalling minimum levels in tanks)
- Maximelder (for signalling maximum levels in tanks)
- Pressure gauge with electrical contact (for signalling limit values)

Wireless rocker switch FT4F-rw

enocean®
- **Energy harvesting: Generates the energy for the wireless telegram when button is pressed**
- **No battery, no connection cable required**
- **Flexible and location-independent use**
A — Page 98
A — Page 118
A — Page 116

Dual rocker DWF
5

Application

For switching wireless actuators. The switch automatically generates the energy required for wireless telegrams when the switch is operated. Connection cables or batteries are not required.

Description

Flexible use with single or dual rocker. If a single rocker is used, two signals can be transmitted: Top part of rocker pressed, bottom part of rocker pressed. Switches with dual rockers can transmit four signals: Two rockers, top and bottom parts pressed. The holding plate can be screwed to a plane surface or glued to walls, glass or furniture by means of the enclosed adhesive film. The unit can also be easily screwed to an existing 55 mm switch box using the existing screw sockets. It is possible to directly establish a wireless connection of the wireless rocker switch to many EnOcean® actuators such as the water valve WaterControl or the indoor siren AIS 10 PRO. The wireless rocker switch can also be operated as a component of the AFRISOhome gateway.

Technical specifications

Supply voltage
Energy harvesting (via press of button)

Door and window contact AMC 20

enocean®

- Maintenance-free battery-less operation
- Solar-operated energy storage module for several days of operation even in darkness
- Easy adhesive mounting at doors and windows
- Battery operation optionally possible

A Page 114
A Page 118
A Page 116

5

Application

Magnetic contact sensor for monitoring the states OPEN and CLOSED and for transmission to the AFRISOhome gateway or to stand-alone wireless components such as the indoor siren AIS 10 PRO.

Description

The door and window contact AMC 20 is a battery-less, maintenance-free magnetic contact wireless module. The energy required to send an EnOcean® telegram is generated by means of an integrated photovoltaic cell. The integrated energy storage module allows for several days of operation even in total darkness. In permanently dark environments (such as basements or warehouses) it is also possible to use a button cell battery. The module monitors the presence of a magnet at the side by means of an integrated Reed contact and signals state changes. A double-sided adhesive strip or the enclosed backet allow for extremely easy mounting of the compact housing to windows, door frames or cabinet doors.

The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

- Loud 90 dB alarm tone
- Integrated repeater function

A
Page 118

A
Page 116

5

Application

Can be used as a stand-alone solution with EnOcean® wireless products or integrated in Smart Home systems as an alarm siren.

Description

The indoor siren AIS 10 allows for versatile use in building technology applications. As a mains plug version, you can plug it into any power outlet and the siren is ready for operation. AIS 10 can be used in a variety of scenarios and programs, for example, as an audible alarm unit in the case of absence or at night when doors or windows are opened which are equipped with door or window contacts (such as AMC 20). The indoor siren also features an integrated repeater for the EnOcean wireless network. This function can be selected in the AFRISOhome app.

Technical specifications

Indoor siren
AIS 10 PRO

enocean®

- ▪ **Ideal as a stand-alone device for setting up a modular alarm system without a gateway**
- ▪ **Compact, unobtrusive design**
- ▪ **Version with mains plug**
- ▪ **Loud 90 dB alarm tone**
- ▪ **Integrated repeater function**

A — Page 95
A — Page 101
A — Page 114

5

Application

Alarm siren as a stand-alone solution for EnOcean® wireless products. You can teach in up to 20 EnOcean® wireless smart home devices into the siren. AIS 10 PRO allows you to create a modular alarm system with or without a gateway or a mobile device.

Description

The indoor siren AIS 10 PRO allows for versatile use in building technology applications. As a mains plug version, you can plug it into any power outlet and the siren is ready for operation. The siren lets you teach in up to 20 smart home sensors via EnOcean® wireless. This includes, among others, door and window contacts, water sensors, smoke alarms, switches, universal wireless transmitters, window handles, AFRISO WATCHDOG-LINE alarm units and additional AFRISO AIS 10 PRO series indoor sirens for alarm on additional floors. If one of the connected EnOcean® devices responds, a radio signal is sent to the indoor siren. The alarm signals from the corresponding sensor are repeated at intervals of one second to ensure reliable transmission. The indoor siren AIS 10 PRO emits a loud alarm tone and the LED lights red.

The following alarm scenarios can be distinguished:
Pre-alarm: LED red and beeping sound 1 x per second. After 5 seconds transition to main alarm.
Main alarm: LED red and 90 dB continuous alarm sound for 5 minutes. Finally, transition to post-alarm.
Post-alarm: LED red and beeping sound 1 x per 5 seconds.

Once the cause of the alarm has been removed, the alarm tone is muted and the LED lights green. In addition, AIS 10 PRO can be operated as a component of the AFRISOhome gateway. If the device is operated as a stand-alone alarm system, the wireless rocker switch FT4F-rw must be integrated as an activation switch. The alarm system can operate in the operating states ACTIVE and NOT ACTIVE, depending on the presence of the persons in the building. In the operating state NOT ACTIVE, the LED lights green, in the operating state ACTIVE, it lights yellow. In the operating state NOT ACTIVE, only safety-related sensors such as water sensors, smoke alarms, rocker switches (used as "panic buttons") or WATCHDOG-LINE alarm units trigger an alarm. In addition, AIS 10 can be operated as a component of the AFRISOhome gateway. The siren can be controlled via a mobile device. AIS 10 PRO also features a repeater function. When operated with an AFRISOhome gateway, the indoor siren also monitors the mains voltage. In the case of power outage, an alarm signal is sent to a master network.

AFRISOhome gateway HG 02

NEW

enocean®

- Base module of your building management system
- Communication via EnOcean® and WLAN
- Versatile combinations of products of the EnOcean®, Z-Wave and Zigbee Alliance
- Voice control with Alexa (Amazon Echo)

Z
Page 118

5

Application

For controlling and managing wireless sensors and actuators with EnOcean® und WLAN technology. Events, messages and measured values are documented, and alarms are transmitted to mobile devices (smartphones), if necessary.
Ideal as control centre of a smart home system in apartments and single-family homes.

Description

The AFRISOhome gateway HG 02 is the control centre of your smart home. The app (iOS, Android und WebApp) allows you to add and control a large variety of compatible devices (see whitelist at www.afrisohome.com) to the smart home.
A WLAN interface is provided for Internet access and communication with routers and smartphones. It is also possible to operate the AFRISOhome gateway without Internet connection. In this case, an independent WLAN network is created. All user data and passwords are stored and processed locally on the AFRISOhome gateway.
Three slots are available that allow you to integrated additional wireless standards by means of an extension module. Currently, Zigbee and Z-Wave are provided.
The free AFRISOhome app for iOS and Android allows for fast and easy operation of the gateway. Smart home systems based on an AFRISOhome gateway excel with virtually unlimited customisability and extensibility.

Application

User interface for mobile devices such as tablets or smartphones to control and visualise all AFRISO smart home building automation sensors and actuators.
The AFRISOhome app allows for integration and interoperation of devices based on the wireless standards EnOcean®, Z-Wave, WLAN and Zigbee. This allows for almost limitless automation. Visit www.afrisohome.com for a detailed list of devices.

Description

All wireless devices, sensors and actuators integrated into a smart home system can be easily divided into groups by means of AFRISOhome gateways. Actuators in rooms, buildings, etc. can be defined as groups.
The access rights for the various groups can be configured separately for mobile devices.
After selection of a group, the display of the mobile device shows the various wireless products. The user is provided with a clear overview of the current situation of the smart home system. Logic states, temperature values, information on the air quality and buttons for the actuators are displayed, among other things.

AFRISOhome gateways with the AFRISOhome app provide for countless combination possibilities in wireless building automation. AFRISO offers reliable, safe and innovative devices with EnOcean® wireless modules. It is also possible to integrate other products of the EnOcean® Alliance into your building automation system. With currently more than 80 compatible devices, the AFRISOhome gateway HG 02 provides great versatility. Along with the optional extension modules Z-Wave and Zigbee, the AFRISO smart home integrates more than 250 devices.

Alarm units with EnOcean® wireless at a glance

With the proven WATCHDOG-LINE alarm units, AFRISO has been offering devices for reducing a vast array of risks in buildings and homes for many years. The alarm units will now successively be EnOcean®-enabled so that an EnOcean® wireless module can be retro-fitted. Whether or not an alarm unit already features this technology is indicated by the labels "EnOcean-ready" on the nameplate.

All devices of the WATCHDOG-LINE are compact units in wall mounting housings for professional and safe installation. Visual alarm and audible alarm that can be acknowledged ensure that the persons in a building are notified of the alarm condition. Residents with or without mobile devices can immediately take appropriate action. The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

Typical application areas

- Collection facilities below oil and water consuming equipment
- Drip pans below storage tanks, burners or motors in buildings or outdoors
- Containers, barrels and tanks/ double-walled tanks
- Sewage tanks
- Cisterns and water storage tanks
- Oil depots, boiler rooms and rooms with mains water connection
- Heating systems
- Cable and pipe ducts
- Canal shafts, manholes and inspection ducts
- Pipes and hoses

EnOcean-ready
The label "EnOcean-ready" indicates that the PCB of the device features a slot for the EnOcean® wireless module. It is sufficient to plug in the TCM 320 wireless module to integrate the device into an EnOcean® wireless building automation system.

Safety and protection of the oil storage system are the basis of our product development. Continuous adaptation to current standards and directives as well as intelligent products such as the piston type anti-siphon valve approved for use in manholes up to -25 °C ensure optimum safety concepts.

i

Since 2003, leak monitoring by means of systems with leak detection fluids is only permissible in the case of existing systems. New systems must be monitored with vacuum type or pressure type systems (such as Eurovac or Europress).

Accessories for GWG filler caps, pressure relief device

GWG filler cap

Application   For facilities that may be operated with fuel oil EL standard and low-sulphur, diesel or biodiesel. Suitable for flood hazard areas.

Description   GWG filler cap with bayonet connection G2 with integrated level sensor connection fitting. Brass male coupling as per EN 14420-6. Filler cap made of oil- and weather-resistant plastic. Watertight up to 10 m water column. Lockable with standard padlock.

GWG filler cap

Filler cap K

Application   For facilities that may be operated with fuel oil EL standard and low-sulphur, diesel or biodiesel. Suitable for flood hazard areas.

Description   Filler cap with bayonet connection G2. Brass male coupling as per EN 14420-6. Filler cap made of oil- and weather-resistant plastic. Lockable with standard padlock.

Filler cap K

Pressure relief device

Application   To avoid overpressure of storage tanks during filling. Suitable for flood hazard areas.

Description   Pressure relief device with male connection thread G1½. Opening pressure approx. 25 mbar. Two or more overpressure devices must be installed for filling rates of more than 300 l/min. Watertight up to 10 m water column.

i
GWG filler caps are also used in building renovation projects since the existing GWG wall fitting can no longer be fixed to the outside insulation.

Tank withdrawal system Euroflex

6

Suitable for use in flood hazard areas. Watertight up to 10 m water column.

Quick-action shut-off valve with lever for fast shutting off of the oil supply. Remote operation from outside of the tank room possible with pull cord.

Version Euroflex 3 with direct connection for pneumatic tank contents gauges. Ideal for retrofitting or for applications involving tanks with few connections.

Floating withdrawal as per DIN 4755 recommendation. Makes it possible to withdraw fuel oil in the clean area and thus supports optimum functionality of the downstream fittings (e.g. oil filters).

Version with special G1 screw connection to avoid twisting. Ideal for use with Euroflex with heating band for fast, simple mounting.

Figure: Euroflex 3 with float

Fitting made of high-strength, weather-resistant plastic. Approved as an isolating piece.

Flexible suction line for maximum variability – also in terms of hose length. The standard lengths 2.15 m and 3.15 m can be shortened as required without any problems.

Measuring line with balance chamber (for Euroflex 3).

All materials resistant to biofuel and biodiesel with max. 20 % FAME (fatty acid methyl ester).

AFRISO

Tank withdrawal system Euroflex

Euroflex 312

- **Combination fitting made of high-strength plastic**
- **Integrated, TÜV-tested isolating piece**
- **Silent check valve**
- **Euroflex 3 for floating withdrawal, also for self-securing withdrawal**
- **Suitable for use in flood hazard areas**
Application

For withdrawal of fuel oil from underground and aboveground tanks in single-line or dual-line mode. Suitable for the following media: Fuel oil EL (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with max. 20 % FAME. Also for use in flood hazard areas. No floating withdrawal in the case of underground tanks.

Description

Combination fitting made of plastic as a withdrawal system with measuring line (not Euroflex 2) and TÜV-tested isolating piece that screws into the tank. G⅜ stainless steel threaded female connections for suction and return lines. Universal compression fittings for pipes with 8 and 10 mm outside diameters for connecting the suction line are enclosed. The integrated check valve with elastic valve seat keeps the oil column in the suction line from being interrupted when the burner is off. Quick-action shut-off valve with lever for remote closing in emergency situations. Pressure- and vacuum-tight up to 1 bar. Also available without check valve for self securing withdrawal.

Euroflex 3 with float and special G1 screw connection for withdrawing oil in the clean area (as per TRWS 791 not recommended in underground tanks). Measuring line connection for hose or pipe with 6 mm outside diameter. Suction hose length 2.15 m or 3.15 m with additional float at the suction hose end.

Euroflex 312 (GWG 12 K/1C), combination of level sensor and withdrawal system. With measuring line connection for hose or pipe with 6 mm outside diameter. For battery tanks as per DIN 6620 and tanks as per DIN 6625 manufactured on site. Specially useful if there is no connection socket at the tank. Connection G1½.

Euroflex with heating band, Miniflex

230 V

Euroflex TH

Application

For withdrawal of fuel oil EL or diesel fuel in single-line mode from tanks that may be subjected to temperatures of less than 5 °C (cloud point, paraffin). Suitable for flood hazard areas.

Description

Combination fitting Euroflex 2 as a withdrawal system with heating band that screws into the tank. A self-controlling heating band is attached to the suction line; at the bottom of the tank the band forms a spiral around the suction point. The required length depends on the tank type and size as well as the installation site. The self-controlling heating band is designed to avoid overheating and burning out. The band is connected to AC 230 V via a connection cable (2 m) and a residual current device. Adaptation to the tanks with special screw connection to avoid twisting. Watertight up to 10 m water column.

Technical specifications

Connection
Tank: G1 male thread
Suction line: G⅜ female thread

Length
Heating band: 5 m, or 7.5 m
Suction hose: 3.15 m (can be shortened)

Heating capacity
At 10 °C: 25 W/m

Miniflex

For withdrawal of fuel oil from underground and aboveground tanks in single-line or dual-line mode. Suitable for the following media: Fuel oil EL (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with max. 20 % FAME. Also for use in flood hazard areas.

Combination fitting made of brass as a withdrawal system with measuring line that screws into the tank. Threaded female connection for suction and return lines. Universal compression fittings for pipes with 8 and 10 mm outside diameters for the suction line are enclosed. Measuring line connection for hose or pipe with 6 mm outside diameter. The integrated check valve with elastic valve seat keeps the oil column in the suction line from being interrupted when the burner is off. Quick-action shut-off valve with lever for remote closing in emergency situations. Pressure- and vacuum-tight up to 1 bar.

Connection
Tank: G1 male thread
Suction/return line: G⅜ female thread
Measuring line: 6 mm

Length
Suction hose: 2.15 m or 3.15 m
Measuring hose: 2.15 m or 3.15 m (not Miniflex 2)

Test pressure
Max. 6 bar

Flow rate
Max. 150 l/h

Material
Screw fitting: brass
Suction hose: NBR/PVC
Balance chamber: Zamak (ZnAl4Cu1)

AFRISO

Pull cord, pressure compensation unit

Pull cord

Description Pull cord with handle and a sealable case for the remote activation of quick-action shut-off valves (e.g. Euroflex or Miniflex). TÜV-tested. Consisting of:

- Pull cord (steel, plastic-coated), 10 m long
- Handle
- 4 eyelet screws for deflecting the pull cord
- Sealable case with wire and lead seal
- Dowels and screws

Pull cord

Pressure compensation unit DAE

Application Used to limit pressure increases in closed pipe sections resulting from expansion caused by temperature changes. Suitable for fuel oil pipe sections which are closed at both ends (e.g. by means of solenoid valves or check valves) and which are subject to considerable temperature differences (e.g. due to pipe heating). Suitable for use in flood hazard areas.

Description Connection G⅜ female thread at both ends. A pipe volume of 725 cm^3 can be buffered at a temperature difference of 40 °C. This corresponds to the following max. line lengths (depending on the line diameter):

- 25.5 m ≥ Ø 8 x 1
- 14 m ≥ Ø 10 x 1
- 9 m ≥ Ø 12 x 1

Watertight up to 10 m water column.

Approval
Conformity certificate (ÜHP)
As per EN 12514-2

Legal and technical requirements concerning fuel oil consuming systems

Legislation for water pollution control (German Water Act WHG) stipulates that any adverse modification of the characteristics of water must be avoided. For example, § 62 and § 63 of the German Water Act specify the handling of water-polluting substances in facilities.

In the case of oil consuming systems operating in suction mode where a pipe section is below the maximum tank level, fuel oil can be siphoned out if a leak occurs. Therefore, protection equipment against siphoning must be installed. Anti-siphon valves are used for this purpose; they are available as solenoid, diaphragm or piston type anti-siphon valves. Diaphragm or piston type anti-siphon valves are usually installed in smaller and medium sized facilities; the piston type anti-siphon valve offers a number of decisive advantages.

Depending on the applicable regulations, the valves must be approved.

Notes on installation

It must be ensured that the vacuum at the suction end at the oil burner pump does not exceed 0.4 bar.

Factors to be considered include:
- The maximum suction lift at minimum oil level
- The suction line length
- The viscosity of the oil in the storage tank at extreme winter temperatures
- Additional pressure losses caused by fittings (such as oil filters, shut-off valves, etc.) and lines

AFRISO

Piston type anti-siphon valve KAV

- Piston instead of diaphragm – for maximum safety even in case of pollution, ice or system overpressure
- Adjusted value corresponds to the safe height (reduced line resistance)
- Also for outdoor use (manhole)
- Sealed system for error-free operation
- Pressure relief mechanism in both directions

Option:
Pressure gauge for indicating the KAV opening pressure

A
Page 135
With universal screw connections 6/8/10 mm and lead sealing kit

Application

For oil carrying suction lines in oil consuming systems where a pipe section is below the maximum tank level. KAV keeps fuel oil from being siphoned out of the tank in the case of leaks in the suction line. Suitable for the following media: Fuel oil (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with up to 100 % FAME. Also for use in flood hazard areas.

Description

Vacuum-controlled shut-off system with a completely new function principle. KAV is closed when the burner pump is not in operation. When the burner pump starts, a vacuum is generated in the suction line. This opens the KAV and fuel oil is pumped from the tank. If the suction line has a leak or if the burner pump stops, KAV closes and the suction line between the tank and the burner pump is closed. KAV features a pressure relief mechanism, i.e. if the fuel oil contained in the suction pipe heats up and therefore expands, KAV opens. The fuel oil can flow back into the tank, provided that a tank withdrawal fitting without backflow preventer is installed. The pressure relief is independent of the adjusted safe height and operates reliably at a response pressure as low as 300 mbar. KAV is continuously adjustable from 1–4 m. The adjusted value corresponds to the actual safe height and not the installation height (as, for example, in the case of diaphragm type anti-siphon valves). This results in reduced line resistance, which has a positive effect on the service life of the burner and the pump. KAV is designed as a sealed system. Therefore, no vent is required and water or dirt cannot get into the system. Since the sensitive diaphragm as the main actuating element has been replaced by a piston, malfunctions caused by pollution, ice or system overpressure (rupture of the diaphragm) are practically impossible. Watertight up to 10 m water column.

Diaphragm type anti-siphon valve MAV

- Safe height 1–4 m
- With shut-off and venting function
Lead sealing kit

A
Page 135

Application

For oil carrying suction lines in oil consuming systems where a pipe section is below the maximum tank level. MAV keeps fuel oil from being siphoned out of the tank in the case of leaks. Suitable for the following media: Fuel oil (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with max. 20 % FAME. Also for use in flood hazard areas.

Description

MAV is continuously adjustable to a safe height of 1–4 m for optimum adaptation to suit local conditions. The adjusted value corresponds to difference between the installation height and the lowest point of the oil line. MAV shuts off under spring pressure and opens under the vacuum caused by the pump. Watertight up to 10 m water column. If necessary, install a pressure compensation unit.

Technical specifications

AFRISO

Tester for safety-related equipment against siphoning

- Reliable tests of all diaphragm type/piston type anti-siphon valves
- Simple check and assessment of the system safety
- Test can be performed easily at all systems with standard filter combinations

Manufacturer-independent application

Application

Tester for function tests of built-in mechanical "safety-related equipment against siphoning" (diaphragm type or piston type anti-siphon valves) in oil carrying pipes or withdrawal systems. Test can be performed at all systems with standard filter combinations.

If no AFRISO filter cup with test and drain system is available, it is sufficient to replace the existing filter cup with the filter cup of the tester. AFRISO recommends to replace all filter cups without drain system so that the fuel oil filter can be drained rapidly and the function test performed easily during servicing. Suitable for tests with the following media: Fuel oil EL (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with up to 100 % FAME.

Description

The tester for "safety-related equipment against siphoning" allows to quickly come to a sound conclusion concerning the correct operation of anti-siphon valves. Mounting is simple: Screw the filter cup of the tester into the fuel oil filter of the facility (not necessary in the case of oil filter cups with test and drain system), plug the hose into the tester drain system, connect an oil suction pump to the other end of the tester and you are ready for testing. For the test, a vacuum must be generated which sucks in oil; the oil flows into the tester cup. The vacuum is maintained in the tester cup via the shut-off fitting and displayed by the pressure gauge. When no more oil flows into the tester cup, there is pressure equilibrium. The vacuum can now be read at the test pressure gauge and you can determine whether the siphoning protection works.

Technical specifications

Dimensions (W x H x D)
Tester: 180 x 286 x 71 mm

Comparison of fuel oil filters

Paper filters

- Optimum ultra-fine filtration
- Specially for small and very small burner capacities
- Preferably for single-line mode

6

Opticlean MS-5/MC-7 ultra-fine filter
Optimum filter surface due to folded paper filter.

Mesh size
- 20–35 µm (MS-5)
- 5–20 µm (MC-7)

Filter surface: 500 cm^2 (MS-5)
700 cm^2 (MC-7)

Opticlean MC-18 ultra-fine filter
Optimum filter effectiveness and long service life.

Mesh size: 5–20 µm
Filter surface: 1,850 cm^2

Can be used with long filter cup.

Replaceable filter cartridge
Excellent filtration. Also suitable for pressure mode and temperatures of up to 80 °C.

Mesh size: 12–30 µm
Filter surface: 967 cm^2

Can be used for all AFRISO filter types with additional adapter.

Sintered plastic sieves

- Excellent filtration
- For small and medium burner capacities
- Suitable for single- and dual-line mode
- Suitable for almost all standard filter combinations

Sintered plastic sieve, short
Star shape for large filter surface.

Colour code: Blue
Mesh size: 50–70 µm
Filter surface: 115 cm^2

Optimum replacement characteristics: Filter base does not swell.

Sintered plastic sieve Optimum
Excellent filtration and long service life.

Colour code: Blue
Mesh size: 50–70 µm
Filter surface: 200 cm^2

Can be used with long filter cup, preferably for single-line mode.

Filter cup Optimum
Extra long filter cup provides for sedimentation volume and space for all standard, long filter inserts.

Version with drain system
- Removing the oil from the oil filter quickly
- No oil odour caused by oil dripping

Felt and Stainless steel sieve

- Proven filtration technology

Schematic Drawing
Felt sieve with internal tubular sieve
For medium and high burner capacities. Suitable for single- and dual-line mode.

Mesh size: 50–75 µm
Filter surface: 15.3 cm^2
below the felt rings

Disadvantage: Filter fibres may come loose and get into the burner nozzles.

Stainless steel sieve
Good filtration, pollution visible. For medium and high burner capacities. Suitable for single- and dual-line mode.

Mesh size: 100 µm
Filter surface: 48 cm^2

Automatic fuel oil de-aerator
Product highlight: FloCo-Top-2CM

TÜV-tested

Advantages – your benefits

- Reduced height facilitates installation if mounting space is limited
- Vacuum gauge for monitoring the system pressure and indicating when the filter needs to be replaced
- Easy installation with click system and AFRISO universal screw connection or standard screw connection
- Proofed Barrier if installed with vent hose
- Suitable for use in flood hazard areas

6

The oil is de-aerated via the vent hose, the system remains odour-tight. Connection via supply air of the room air-independent ventilation of via the return supply of the tank withdrawal system Euroflex.

De-aerator unit with dual float safety system – keeps oil foam from escaping.

Backflow preventer with integrated pressure relief towards the tank.

Pipe connection for universal compression fitting or stand screwed connection with threaded connection G³/₈.

Lateral dual shut-off valve, can be operated from both sides for left or right mounting.

Drain valve with hose connection for fast, clean draining of the oil from the filter cup during filter replacement, emergency operation or connection of a tester for tightness tests.

Rotatable service indicator for the system owner. It is easy to see when the filter needs to be changed. If the filter insert is polluted, the vacuum increases and the heating expert can be notified.

360°

Robust base housing made of high-strength plastic.

Installation with click system.

Drain system for controlled discharging of the oil from the vent unit.

Optimised filter cup with thread and radial O ring seal for easy loosening of screwed connection.

Function	Continuous de-aeration		Continuous de-aeration and oil filtration		Continuous de-aeration and multiple oil filtration		Continuous de-aeration and oil filtration
Filter	-	-	Sintered plastic filter		Sintered plastic filter	Opticlean ultra-fine filters	Sintered plastic or Opticlean filter
Vacuum gauge	-	-	-	-	-0.7/+0.9 bar		
Approval	Conformity certificate (ÜHP) as per EN 12514-2						

i

Nomograph for determining the internal pipe diameter (NW) of the fuel oil suction line in order to keep gas from accumulating in higher pipe sections and sections with downward gradients, or gas formation resulting from excessively high flow speeds.

Example: A pipe with Ø 8 x 1 mm (NW 6) is required for a volume of 20 l/h and an average flow rate of approx. 0.23 m/s.

Our tip

Only installation by expert companies certified according to the applicable regulations ensures optimum operation of the automatic de-aerators. For optimum combustion, longer nozzle and filter service life and reliable function, the expert determines the following prior to installation and compares the values with the nomograph:

▪ Oil throughput per hour at burner nozzle
▪ Inside diameter of the (installed) oil suction line
▪ Vacuum (overpressure) in the oil carrying pipe upstream of the burner

The oil suction line is often too large. The flow rates of 0.2/0.5 m/s, required according to DIN 4755-2, are often not reached in systems converted from dual-line to single-line mode. The nomograph shows the proper values for sizing the suction line.

① Nozzle consumption l/h
② Inside diameter of the suction line in mm
③ Flow rate of the fuel oil in m/s
④ Less than Ø 4 "not advisable
⑤ Recommended range as per DIN 4755-T2

Automatic fuel oil de-aerator
Flow-Control 3/K TÜV-tested

"PROOFED BARRIER"

- **Trouble-free operation due to automatic de-aeration**
- **Dual float safety system keeps oil foam from escaping**
- **Increased fuel oil filter service life – the amount of oil drawn from the tank corresponds exactly to the oil actually burnt**
- **The suction line can usually have a smaller cross section**

"PROOFED BARRIER" if installed with vent hose.

Application

For single-line systems with return line in oil-fired systems for continuous de-aeration. Suitable for the following media: Fuel oil EL (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with max. 20 % FAME. Also for use in flood hazard areas. The risk of a leak in the return line going unnoticed is removed with Flow-Control. It is no longer necessary to regularly check the return line for leaks.

Description

Automatic fuel oil de-aerator consisting of a diecast zinc housing with female G¼ connection thread at the tank end and male G⅜ connection threads with 60° cone at the burner end for connection of the burner hoses. Plastic or metal de-aerator hood. Flow-Control 3/K features two separate float chambers. The lower float chamber contains the operating float; the upper float chamber contains the safety float. The upper float chamber keeps oil foam from escaping via the vent opening (e.g. during commissioning/filter exchange) and indicates malfunctions of the vent valve. An oil hose with ball-shaped sealing for 60° cone and a G⅜ union nut is supplied for connection to the fuel oil filter. Watertight up to 10 m water column. All Flow-Control versions are TÜV-tested.

Flow-Control 3/K (G¼) with connections G¼ female at burner end instead of G⅜ male thread.

Technical specifications

Connection burner
G⅜ male with 60° cone
for burner hose or G¼ female (part no. 69978)

Connection tank
Part no. 69930:
G⅜ female with oil hose G¼ male x G⅜ female;
Part no 69978:
G¼ female thread with oil hole G¼ male
thread x G⅜ union nut for connection to filter

Nozzle capacity
Max. 100 l/h

Return flow
Max. 120 l/h

Separating capacity air/gas
Approx. 4 l/h

Mounting position
Float housing vertical to the top

Operating temperature range
Medium: Max. 60 °C
Ambient: Max. 60 °C

Operating overpressure
Max. 0.7 bar
(corresponds to static oil column of approx. 8 m)

Test pressure
6 bar

Dimensions
W x H x D: 95 x 147 x 95 mm

Tests
TÜV-tested (S 133 2013 E2)

Approval
Conformity certificate (ÜHP)
as per EN 12514-2

i
The devices must not be subjected to undiluted additives, alcohol and acids.

AFRISO

Automatic fuel oil de-aerator
Flow-Control 3/K HT TÜV-tested

- **High temperature version:**
  Up to a temperature of the medium of 80 °C
- **Dual float safety system keeps oil foam from escaping**
- **Increased fuel oil filter service life – the amount of filtered oil drawn from the tank corresponds exactly to the oil burnt**
- **No unnoticed leakage in the return line**

"PROOFED BARRIER" if installed with vent hose.

Application

For single-line systems with return line in oil-fired systems for continuous de-aeration. Suitable for the following media: Fuel oil EL (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel with up to 100 % FAME as well as vegetable oils (colza oil). Also for use in flood hazard areas. Flow Control 3/K HT is recommended for mounting below the max. fuel oil level in the tank and for any application requiring particular safety.

Description

Automatic fuel oil de-aerator consisting of a diecast zinc housing with female G¼ connection thread at the tank end and male G⅜ connection threads with 60° cone at the burner end for connection of the burner hoses. An oil hose with ball-shaped sealing for 60° cone and a G⅜ union nut is supplied for connection to the fuel oil filter. The de-aerator hood consists of glass-fibre reinforced plastic (not transparent), all seals are made of FKM. Flow-Control 3/K HT features 2 separate float chambers. The lower float chamber contains the operating float; the upper float chamber contains the safety float. The upper float chamber keeps oil foam from escaping via the vent opening (e.g. during commissioning/filter exchange) and also indicates malfunctions of the vent valve. The risk of a leak in the return line going unnoticed is removed with the single-line system. It is no longer necessary to regularly check the return line. Also suitable for pressure mode up to 0.7 bar. Watertight up to 10 m water column.

FloCo-Top-2KM Si

- **Multiple filtration for maximum separation of dirt particles**
- **Backflow preventer with integrated pressure relief towards the tank**
- **Drain valve for fast and clean filter change**
- **Bypass valve for easy and clean burner hose replacement**

Application

For single-line systems with return line in oil-fired systems for continuous de-aeration. Suitable for the following media: Fuel oil EL (DIN 51603-1) and diesel fuel (EN 590) as well as biofuel and biodiesel (EN 14214) with max. 20 % FAME. Also for use in flood hazard areas. FloCo-TOP-2 can be installed in any system. Multiple filtration is recommended for burners with an oil consumption of < 20 l/h while larger systems should be operated with single filtration.

Description

Automatic fuel oil de-aerator, safety version, with integrated filter, shut-off valve and vacuum gauge. Housing with changeover valve for multiple filtration as well as backflow preventer with integrated pressure relief towards the tank. Compact de-aerator hood made of transparent plastic with dual float safety system to keep oil foam from escaping via the de-aerator opening. The vent hose is connected at the side in an unobtrusive way. For venting, the oil is guided via the float chamber and can then be added directly to the flow or it can be filtered again by switching a valve. In the case of multiple filtration, the return oil increases the flow rate so that the filter bowl is permanently filled with de-aerated oil. In service mode, the vacuum gauge indicates the pump vacuum. The shut-off valve can be closed to check the suction capacity of the burner pump. Increased vacuum provides information on the degree of pollution of the filter. The drain valve ensures that replacing the filter is easy and clean: Connect the hose, open the drain valve, loosen the union nut of the filter cup and drain the oil in a controlled way. When the burner hose needs to be replaced, it is sufficient to open a bypass valve so that the oil is drained from the float chamber via the filter cup and the drain system. Watertight up to 10 m water column.

i

* The filter surface of **Opticlean ultra-fine filters** is up to 37 times greater than that of conventional filter inserts; they excel with an extremely high degree of filtration. Filter fineness of nominal 5 µm (absolute 20 µm) separation is possible.

Even the smallest drops of water and emulsion are retained with high reliability. Opticlean filter cartridges can be used in any standard fuel oil filter, they are metal-free and can be recycled in an environmentally protective way.

Accessories for fuel oil de-aerators/oil filters

Screw connections

Description   For installation in the oil pipe. See ordering table for versions.
Screw connection

Vacuum gauge

Description   For indication of the filter condition. Available for direct mounting to standard fuel oil filters. G⅜ union nut at filter end, G⅜ male thread with sealing cone 60° at burner end for burner hose. Or with G⅜ female thread x G⅜ male thread for mounting to filter with G⅜ female thread at tank end. Suitable for use in flood hazard areas. Watertight up to 10 m water column.

Vacuum gauge

Replaceable filter adapter

Description   The replaceable fine filter cartridge can be fitted to all AFRISO filter types (except Z ½-500 and V ½-500) by means of an adapter and can then be operated both in pressure and suction mode.

Replaceable filter adapter

Oil filter spanner

Description   To loosen the union nut of the filter cup and the replacement system fine filter cartridge of automatic fuel oil de-aerators and fuel oil filters.

Open end spanner

Description   For easy and fast operation of the replaceable filter adapter.

Oil filter spanner
Open end spanner

Hand-held suction pump for fuel oil

Equipment for safe operation of heating systems

AFRISO offers a broad range of products for the safe operation of heating systems. Irrespective of whether the heating system uses renewable energy or fossil fuels.

Anti-siphon valves, withdrawal systems, level sensors, leak detectors and overfill prevention systems increase the safety of fuel oil storage facilities. Boiler safety group assemblies, solar and heating pump assemblies, connection assemblies for expansion vessels, anti-tamper cap valves, boiler safety group assemblies, diaphragm safety valves, control thermostats, thermal safety valves and boiler water low level alarms are provided as equipment for heating systems.
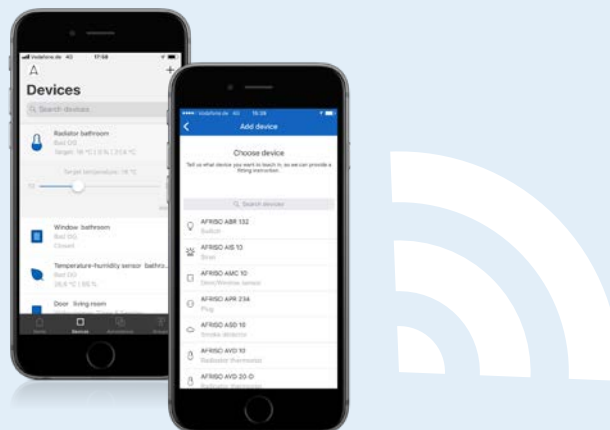

enocean®

The EnOcean® wireless technology allows you to easily integrate alarm units and sensors into building automation systems and operate them conveniently via smartphones or tablets.

Motorised boiler room vent Air-Control

- **Saves heating costs, is reliable and silent**
- **System or room cannot cool down**
- **Sturdy, impact-resistant plastic**
- **Complete with accessories for easy installation**
① Hood PC
② Terminal block
③ Fixing screw
④ Connection cable (4-core)
⑤ Protective grille
⑥ Window/wall (on site)
⑦ Insect protection stainless steel mesh

Application

Suitable for installation in basement windows or ventilation ducts for burner-controlled oxygen supply of boiler rooms with oil and gas-fired burners of up to 50 kW. System or room cannot cool down.

Description

Burner-controlled motorised boiler room vent, consisting of a robust, impact-resistant plastic housing with injection-moulded mounting flange, a mating flange with a protective grille and a gear motor for actuating the slide. Can also be operated manually; with function indication.

Boiler rooms which are equipped with oil- or gas-fired burners must be supplied with a sufficient amount of oxygen (e.g. in accordance with the German FeuVo). This is often achieved by constantly open boiler room windows or by inlet air ducts. The cold air which constantly flows into the boiler room causes the boiler and the water supply as well as the pipes to cool down. As a result, the burner is switched on more frequently and consumes unnecessarily high amounts of fuel.

Air-Control is mounted onto the pane and is electrically connected to the boiler thermostat. Air-Control can also be mounted onto air ducts. The window remains closed and keeps the warmth inside. As soon as the boiler temperature drops, the boiler thermostat switches on Air-Control. Opening the vent activates a microswitch which closes the burner circuit. The burner starts to operate only when the motorised boiler room vent is open and is supplied with pre-warmed ambient air in the ignition phase. The motorised boiler room vent remains open during the entire combustion process and provides the boiler room with enough fresh air. The burner switches off when the preset temperature is reached. Air-Control closes automatically.

Technical specifications

Housing
Plastic (ABS)
W x H x D: 260 x 300 x 115 mm
Weight: 1.0 kg
Degree of protection: IP 20 (EN 60529)

Installation opening
216 x 166 mm

Cross section fresh air supply
150 cm^2

Supply voltage
AC 230 V

Contact rating
AC 250 V, 2 A

Burner capacity
Max. 50 kW. For larger installations, several motorised boiler room vents can be installed.

AFRISO

Draft stabiliser WZB-1

- **Saves heating costs, optimises combustion and keeps the chimney draft constant**
- **Stabilises the chimney draft**
- **For oil, gas or solid fuel systems**
① "Chimney connection" always above flue connection
② "Flue gas connection" with pipe connection piece

Application

The draft stabiliser for oil, gas or solid fuel systems keeps chimney draft constant and the chimney dry. Suitable for connection to flue gas pipes with Ø 120 to 200 mm by means of pipe connection pieces or to brickwork chimneys or chimneys with several walls by means of special connection pieces.

Description

Draft stabiliser made of galvanised sheet steel with flap. The flap is set on site by means of a rotary knob acting on a weight for precise adjustment. Depending on the adjustment of the weight, the flap admits more or less secondary air into the chimney when the vacuum gets too high.

The natural chimney draft is approx. 20 to 50 Pa, depending on the height and the cross section of the chimney as well as the weather conditions. These values increase when the temperature increases. The draft stabiliser allows for setting the vacuum required by the manufacturer of the heating system (oil or gas burner/boiler combination, oil or gas furnace, etc.) and keeps this vacuum almost constant. Correct chimney draft is a prerequisite for an optimum combustion process and contributes to a reduction in heating costs.

The draft stabiliser performs the following functions:
- It limits the vacuum to the required value
- It keeps the chimney dry and prevents soot deposits

Technical specifications

Adjustment range (draft requirements):
10/26 Pa

Application area
Heights of up to 20 m and chimney group i/II up to 400 cm^2, chimney group III up to 500 cm^2

Operating temperature range
Flue gas: Max. 400 °C

Mounting position
Flap axis horizontal
Flap vertical

Tightness at Δp 10 Pa
< 3 m^3/h

Boiler water low level alarm
WMS-WP6 – mechanical

- **For protection of the boiler when the water level is too low**
- **TÜV-tested as a water level limiter**
- **Direct mounting via welding socket or connection thread**
- **With test button for function test**

Version with
connection thread
R2 AG

Application
For sealed heating systems to protect the boiler as per EN 12828 in the case of low water levels.

Description
Mechanical boiler water low level alarm with float. Consisting of a cast brass body with welding sockets and a float mechanism, an electrical switch, test and unlock buttons. TÜV-tested as a water level limiter. If the water level in the boiler drops below a minimum level, a float activates a switch. The power supply to the boiler is interrupted. A locking mechanism keeps the burner from switching back on automatically. The test button allows the float to be lowered to simulate a low water alarm condition.

Version WMS-WP6-R2 with male connection thread R2 for direct installation in the boiler.

Technical specifications

Operating temperature range
Medium: Max. 120 °C
Ambient: Max. 120 °C

AFRISO

Thermal safety valve
Combustion controllers

- High response temperature
- Short stem
- Very simple function test

Thermal safety valve TAS 03

Application

To protect sealed or open solid fuel heating systems as per EN 12828 with a heating capacity of up to 86,000 kcal. Also required for dual-fuel boilers which can be operated with solid fuels.

Description

Thermal safety valve with two independent sensor systems. TAS consists of a valve housing, a valve, two independent bellow type displacement probes with liquid-filled temperature probes and a pocket. The capillary tube is protected by a flexible metal hose. TAS is connected to the water outlet of the water heater or to the inlet of the safety heat exchanger. If the response temperature is exceeded, the valve is opened by the thermal probe and cooling water is supplied to keep the system from exceeding the maximum operating temperature. Correct operation of TAS can be verified quickly and easily by simply pressing the valve head.

Technical specifications

Operating pressure: Max. 10 bar

Operating temperature range: Ambient: 80 °C

Response temperature: 99 °C

Blow-off capacity
At 110 °C and $\Delta p = 1$ bar > 2.4 m³/h

Connections: 2 x G¾ female thread

Connection stem: G½ male thread

Dimensions
Pocket length: 146 mm
Capillary tube length: 1,300 or 4,000 mm

Housing: Hot-pressed brass

Combustion controller FR 1

For temperature-dependent adjustment of the air supply damper of solid fuel and dual-fuel boilers.

Installation option FR 1
❶ Chain
❷ Air supply damper

The FR 1 combustion controller controls the combustion air supply. The temperature in the heat generator is detected by an integrated thermostat. The thermostat is connected to the air supply damper by means of a lever and a chain.
The air supply is controlled by means of opening or closing the air supply damper, depending on the boiler flow temperature.

Control range: 30/90 °C

Operating temperature range
Medium: Max. 115 °C
Ambient: Max. 70 °C (at switching button)

Connection: G¾

Dimensions
Stem length: 53 mm, chain length: 1.2 m

Chain load: 100 to 600 g

Mounting position: Horizontal or vertical

Materials
Housing: Plastic
Stem: Brass
Lever/chain: Galvanised steel

i

Automatic quick air vents PrimoVent

AQUA
STOP

Air in the system is a frequent cause of malfunctions of heating, cooling and solar systems. The cause of "air in the system" should be able to removed. However, there are no systems that are always 100 % tight. The AFRISO PrimoVent product family continuously and automatically removes air from heating and solar systems, thus helping to avoid corrosion caused by air and inclusion of air in systems. AFRISO quick air vents are available as brass, plastic or hybrid versions and are always subjected to a 100 % function test prior to shipment.

Universal application for water and water-glycol mixtures (max. 50 % glycol)

Integrated aqua stop for reliable operation without water leakage. The protective cap does not need to be removed even during initial filling or maintenance.

Protective cap for vent, cannot be lost.

Cover with patented nozzle geometry: The slot-shaped vent opening provides for a high venting capacity.
Slim design for low heat loss – ideal for installations where space is limited.

Multifunctional lever for dependable opening and closing of the valve – directly connected to the float so that disconnection is not possible.

Two-way venting principle: separated air escapes via the central hole in the float in a defined way without taking along water.

Optimised float geometry for minimum capillary effect – avoids the formation of an air cushion to suppress undefined "jumps" of the float.

Depending on the version: Brass or plastic connection, G⅜ or G½ with O ring seal.

i

Mounting valves for quick air vents ensure easy, fast installation. Dismounting is possible at any time without draining the system.

Air separator

- ▪ **Pre-assembled, tightness-tested and heat-insulated assembly**
- ▪ **Continuous, automatic venting of the system**
- ▪ **Cost savings due to fewer malfunctions and longer service life of the system**
- ▪ **Fast and easy integration into existing pipes via reducer unions**
Function principle

Application
For removing air from heating systems. The air separator ensures reliable operation, better and faster heat transfer and thus contributes to reduced fuel consumption and emissions. Suitable for hot water heating systems and underfloor heating systems. Air is removed from the system without chemical additives.

Description
Compact air separator with integrated quick air vent in form-fit insulation. The new function principle with two separation chambers ensures a reduced flow speed for effective separation of air and water. The lower the flow rate in the separator, the better the air bubbles can be removed from the water due to the difference in density. The air bubbles rise, collect in the upper area in a calm zone and are automatically removed by means of the quick air vent without taking along water. The quick air vent features an aqua stop to keep water from escaping. The air separator can be installed in the flow (preferred) or return line. Reducer unions G1 female and G¾ female are available for renovation or retrofitting in existing pipes.

Sludge separator

- **Pre-assembled, tightness-tested and heat-insulated assembly**
- **Single-operation cleaning while the system is running**
- **Energy savings due to improved heat transfer at system components**
- **Fast and easy integration into existing pipes via reducer unions**
Function principle

Application

For removing dirt particles from heating systems. Particles can cause problems in fittings and control units. The sludge separator ensures clean water, reliable operation, better and faster heat transfer and thus contributes to reduced fuel consumption and emissions. Suitable for hot water heating systems and underfloor heating systems. Rust, lime particles, calcium, magnesium, oxides, carbonates and sludge as well as larger particles such as chips or construction residues are removed from the water – without the use of chemicals. Excellent for the renovation of system parts subject to sludge accumulation.

7

Description

Compact sludge separator with drain valve in form-fit insulation. The highly efficient concept removes sludge from the water. Plates in the separator deflect the particles into a separate area. From there, the dirt particles can be flushed out during normal operation by means of a valve. The sludge separator can be combined with the air separator and can be installed in the flow (preferred) or return lines. Reducer unions G1 female and G¾ female are available for renovation or retrofitting in existing pipes.

Flow filters, combined air/flow filters
- Dirt particle separator
- Suitable for open and sealed circuits
- Flushing possible during operation of the system
- Cost savings due to fewer malfunctions and longer service life of the system
- Energy savings due to improved heat transfer at clean system components
Application
Flow filters and combined air/flow filters remove lime, rust, sludge, dirt and gas from heating systems to provide clean water and trouble-free operation. Suitable for hot water heating systems, underfloor heating systems, fuel cells and renovation of system components (sludge removal).

Description
Most advanced heating systems use water for heat transmission. This water may also transport unwanted substances such as lime, calcium, magnesium, oxide, carbonates as well as larger particles such as welding or soldering residue, metal chips and dirt. These substances may cause malfunctions in fittings and control units. A compact flow filter (particle separator) removes these particles from the water. The particles settle in the collection chamber of the filter and can be flushed out via a valve with small amounts of water. Clean water supports trouble-free operation of systems and reduces the fuel and maintenance costs.

Clean system components have better thermal conduction, they provide for faster heating up and thus contribute to reduced fuel consumption and emissions.

The combined air/flow filter was developed for heating systems which are subject to problems caused by oxygen or other gases. The vent valve automatically removes the gases.

High draining capacity for easy and fast draining

7

Anti-tamper cap valve with integrated boiler filling and drain valve KFE

Anti-tamper cap valve with drain valve

Application
For connection, maintenance and checks of diaphragm expansion vessels in heating systems as per EN 12828 and in solar systems. To be installed at the water inlet of the expansion vessel.

Description
Anti-tamper cap valve with screw connection G¾ x G¾ or G1 x G1. The shut-off valve is secured against inadvertent closing by means of a cap and a lead seal. The integrated boiler filling and drain valve KFE (connection: G¾ eurocone) allows for easy draining of the expansion vessel. For this purpose, a hose can be connected by means of a union nut. The expansion vessel can be shut off from the heating system and drained with a high draining capacity (time saving) via the drain valve for the required function test or for replacement.

Anti-tamper cap valve with screw connection G¾ x G¾ or G1 x G1. The shut-off valve is secured against inadvertent closing by means of a cap and a lead seal. Valve operation via standard square spanner size 5 for radiator vent valves. The expansion vessel can be shut off from the heating system and drained via the drain valve for the required function test or for replacement.

Diaphragm safety valves MS, MSM

MSM with pressure gauge
for heating systems

- **For protection against overpressure in heating systems**
- **For water, water/glycol mixtures, liquids of fluid groups 1 and 2**
- **MSM with pressure gauge for indication of the system pressure**

Application

For sealed heating systems as per TRD 721; VdTÜV sheet Safety Valve 100 and 100/4 sheet 1; EN 12828. Also for water heating systems as per DIN 4751-2 with flow temperatures up to 120 °C and DIN 4751-3 with flow temperatures up to 95 °C. Suitable for water, water/glycol mixtures (max. 50 % glycol) and liquids of fluid groups 1 and 2 (Pressure Equipment Directive, Art. 9).

Description

Safety valve with factory-adjusted opening pressure. MSM with pressure gauge for indicating the system pressure. The size of the valve inlet determines the unit type, the outlet is ¼" larger.

Differential pressure bypass valves DÜ

- **For constant pump pressure in heating systems**
- **Reduction of flow noise**
- **With adjustment scale**
- **Differential pressure fully adjustable**
- **Either space-saving angled version or straight version**

Application

For keeping the pump pressure in sealed heating systems as per EN 12828 constant and for reducing flow noise in the heating system.

Description

Differential pressure bypass valve with directly readable adjustment scale. Housing made of brass. Available as straight version or angled version for space-saving installation.
The differential pressure in the heating system at full load is set directly at the bypass valve. If the volume flow is reduced, the valve opens to keep the head of the circulation pump constant.

Filling and drain fittings

Filling fitting FAM

Filling fittings FA / FAM

Application For sealed heating systems as per EN 12828.

Description Filling fitting with housing and spring cap made of brass. Inlet for hose inside diameter 12 mm, outlet G½ female thread.
With G¼ connection for pressure gauge for heating installations.
With pressure reducer, shut-off valve and back-flow preventer. Inlet pressure 6 up to 10 bar, outlet pressure adjustable between 0.5 and 3 bar.
Version FAM with pressure gauge for heating installations Ø 63 mm, 0/4 bar, G¼ bottom.

Boiler filling and drain valve KFE, brass, plain
Boiler filling and drain valve KFE, brass, nickel-plated

For sealed heating systems as per EN 12828.

Boiler filling and drain valve. Ball valve version made of brass. One side G½ male thread with PTFE sealing ring, other side ½" hose connector with G¾ union nut and blind cap with chain or strap. Available in plain brass (drinking water) or nickel-plated brass (heating circuit water).

Flow meter DFM 10-1M

- Direct indication of the flow rate in l/min
- Compact design

Dimensions (mm)
Application

For monitoring the flow in heating/cooling systems. Specially for direct mounting to heating circuit manifolds. Suitable for heating and cooling water as well as water mixtures with standard corrosion protection and antifreeze agents.

Description

Compact flow meter with scale. The flow meter can be installed in pipes in a horizontal, tilted or vertical position. The reading mark corresponds to the lower edge of the rotameter/float.

Flow meters
DFM 15-2M / DFM 20-2M

- Integrated ball valve for adjustment and shutting off
- Direct indication of the flow rate in l/min
- Adjustment without diagram, table or measuring instrument
- Available with numerous connection versions

Application

For hydraulic balancing and flow monitoring in heating/cooling systems, air conditioning systems, solar systems and geothermal systems. DFM allows for fast hydraulic balancing of the system or of system components without diagrams, tables or measuring instruments. Suitable for heating and cooling water as well as water mixtures with standard corrosion protection and antifreeze agents.

Description

Compact flow meter with scale and ball valve for shutting off and adjustment.
The flow meter can be installed in pipes in a horizontal, tilted or vertical position. Adjustments are made by means of a screwdriver via the adjustment screw. The reading mark corresponds to the lower edge of the rotameter/float.
Systems with correct hydraulic balancing provide for optimum energy distribution and cost-efficient operation.

AFRISO

3-/4-way mixing valves
ARV ProClick

NEW

- For distribution and mixing
- Compact design
- Non-slip rotary knob
- Low torque for increased service life of actuator
- ProClick adapter system for motor mounting without tools

A

Application

Universal mixing application in water-based heating and cooling systems (radiators, panel heating systems). The 3-way mixer can also be used as a distribution or zone mixer. Suitable for water and water/glycol mixtures with up to 50 % glycol. Not suitable for drinking water.

Description

Compact, low-loss 3-way or 4-way mixing valves with brass base and easy-to-handle rotary knob made of high-strength plastic. The rotary knob with scale allows for easy and accurate manual adjustment of the mixing valve. The elevated mark allows for fast position determination. Two scales with "0 to 10" for horizontal installation and "10 to 0" for vertical installation are included for maximum flexibility.

3-way mixing valve for distribution and mixing: The desired flow temperature is obtained via the precise mixing ratio of hot boiler water and cold water from the return line.

4-way mixing valve for dual mixing. The return temperature to the boiler can be high in order to avoid corrosion damage, for example.

The mixing valves are easy to automate with the AFRISO actuators. The new AFRISO ProClick adapter system allows for hassle-free mounting of the motor to the mixing valve without tools – snap on and done. The low torque ensures a low load on the valves and a long service life.

Actuator ARM ProClick

NEW
The new silent actuator ARM ProClick is the optimal solution for the automatic control of the return admixture. Thanks to the AFRISO ProClick adapter system, it can be easily mounted to the mixing valve in a matter of seconds: Snap on – done. This simplicity is also available for switching between automatic and manual mode – it is sufficient to press a button. The new actuator excels with smart features such as integrated protection against blocking of the mixing valve or maintenance-free operation for a long service life.

Mounting in a matter of seconds without tools: Simply snap the actuator onto the mixer, done. Dismounting at the push of a button.

ProClick ADAPTER SYSTEM für AFRISO ARV (KVS Vario)
Colour LEDs indicate direction of rotation, ideal for use in darker environments.

Full flexibility with regard to mounting direction: The orifice plate features scales on both sides with "0 to 10" or "10 to 0" and can be turned, depending on the direction of flow.

A rotary knob with scale allows for fast and accurate adjustment of the mixing valve.

Simply press a button: Fast switching between automatic mode and manual mode.

Advantages – your benefits

- Compact, silent actuator with an angle of rotation of 90°
- With ProClick adapter system suitable for AFRISO mixing valves DN 25 and DN 32
- High reliability: An integrated protection unit keeps the actuator and mixing valve from blocking for a long service life

ProClick ADAPTER SYSTEM
für AFRISO ARV (KVS Vario)

Application

Can be used for controlling AFRISO series ARV ProClick mixing valves DN 20 to DN 50. Perfect solution for automated operation of water-based heating and cooling systems. Suitable for the AFRISO mixing valve series AVR with ProClick adapter system and for automating the AFRISO pump assemblies 180-2 with nominal diameters DN 25 and DN 32. The new AFRISO ProClick adapter system allows for hassle-free mounting of the motor to the mixing valve without tools – snap on and done.

Description

Compact, silent actuator with an angle of rotation of 90° and keys for switching from automatic mode to manual mode. The rotary knob with scale allows for a precise indication of the position in both modes. Three LEDs indicate the direction of rotation of the actuator. The pre-assembled connection cable with colour-coded wires as well as a wiring diagram on the nameplate simplify installation. For full flexibility during mounting, the orifice plate features scales on both sides with "0 to 10" or "10 to 0" and can be turned, depending on the direction of flow. The integrated protection unit keeps the actuator and mixing valve from blocking for a long service life. ARM is maintenance-free.

Heating pump assemblies
PrimoTherm® 180 DN 25 KVS Vario
Combination valves with thermometer in the hand wheel, range 0/120 °C. Red/blue mark facilitates the assignment of "supply/return" and function test through the owner/operator of the system. Additional temperature probes (for example, PT 100) can be integrated behind the ball valve.

System connection G1 female for rapid mounting in the heating circuit.

Integrated adjustable gravity brake.
Sophisticated wall mounting kit for easy, fast installation.

Virtually any standard pump can be installed without refitting of the insulation.

Modular system with pump and return line left or right.
Ball valve below the pump for easy shutting off and increased safety.

NEW

NEW
System connection G1½ male for fast mounting to the boiler flow/return by means of flange and union nut. Suitable for KSV.

Cable routing in the insulation for professional installation of pump and actuator cables.

Snap on – done. New actuator with ProClick adapter system for lightning-fast mounting to the mixer without tools.

High-grade, robust mixer with adjustable flow coefficient Kvs (2.5 to 12) for maximum flexibility all the way to the construction site.

7

AFRISO

Product highlight:
3-way mixing valve ARV 325 KVS Vario with AFRISO ProClick adapter system

NEW

The flow coefficient is key in rating hot water heating systems and providing the right amount of heat at the radiators. Mixing valves in installations must be correctly rated before they are mounted and adjusted to the required flow coefficient Kvs of the system. If a selection error is made or the system is modified at a later point in time (for example, extended), the existing valve is usually no longer usable. If the flow coefficient Kvs is only estimated, the system will not operate in an efficient way.

Mixer housing made of brass, with robust, glass-fibre reinforced orifice for adjustment of flow coefficient Kvs.

Locking: Integrated locking unit against unintended readjustments.

Easy adjustment of flow coefficient Kvs (initial mounting) with standard slotted screwdriver at the rear of the mixer.

Fast and easy conversion bypass to connection at the right.

7

Adapter to attach the AFRISO ARM ProClick actuator at the correct position without tools.

ProClick ADAPTER SYSTEM
Für AFRISO ARV (KVS Vario)

Readjustment of flow coefficient Kvs by turning the adjustment handle (no draining of system, unit mounted).

Handy, non-slip rotary knob made of high-strength plastic – the scale can be adjusted according to the direction of flow (flow right or left).

Easy-to-read scale with adjustment values 2.5 – 4 – 5 – 6 – 8 – 12.
Advantages – your benefits

- **A mixer for all cases:**
  Simply set the required flow coefficient Kvs without draining the system
- **No incorrect rating thanks to optimum adaptation to the control requirements of the system. This allows for:**

  - **+** **Smaller volume jump V_{min} / smaller minimum controllable power Q_{min}**

  - **+** **Higher valve authority PV (pressure ratio between mixer and pipe system with all consumers connected)**

  - **+** **Complete use of mixer control range (0–100 %)**

  - **+** **Improved controllability: No cycles, no flow noise**

  - **+** **Positive effects on hydraulic balancing: Power required to heat the heating surfaces is available and can be used**

- **Long-lasting service life: Low torque for increased service life of actuator**
- **Reduces number of versions and warehousing efforts for mixers and pump assemblies**

Description

The heating pump assembly PrimoTherm® excels with its versatility and great number of possible combinations. The system assembly for the heating circuit is pre-assembled, tightness-tested, heat-insulated and available in three versions and two sizes, each with or without high energy efficiency pump. All circulation pumps offered by AFRISO meet the requirements of the European Ecodesign Directive (stage 2 as of 2015). The universal insulation allows for the installation of virtually any standard pump without reworking of the insulation. In addition, the system is modular so that the flow line can be mounted at the left or the right side; due to the slim design, it is also possible to mount several pump assemblies next to each other on AFRISO boiler manifolds. In addition, each pump assembly comprises a fastening kit for wall mounting in any position. All PrimoTherm® heating pump assemblies feature a gravity brake to avoid incorrect circulation. The DN -25 versions have the brake in the combination valve; it can be deactivated for servicing. It is also possible to mount temperature probes in the combination valve.

The versions **PrimoTherm® 180-1 DN 25 and 32** are used in non-mixed heating circuits, specially for storage tank charging.

The versions **PrimoTherm® 180-2 DN 25 and 32** are used in mixed heating circuits. With the 3-way mixer and the actuator, the flow temperature can be adjusted to a desired temperature by adding water from the return. PrimoTherm® 180-2 can also be used to increase the return temperature with solid fuel boilers which have a controller for increasing the return temperature. The opening temperature must be set at this controller.

The version **PrimoTherm® 180-3 DN 25** automatically controls the return temperature of the system water to the heat generator to the value adjusted in the valve. The integrated condensation protection valve is the connection between the solid fuel heating system and the heating circuit or the hot water storage tank.

Heating pump assembly PrimoTherm® 180-1 DN 25

- **Pre-assembled, tightness-tested and heat-insulated assembly**
- **Modular system with flow at left or right**
- **Easy and fast installation**
- **With high-efficiency pump class A**
A

Page 180

Application

Heating pump assembly for use in non-mixed heating circuits, specially for storage tank charging. It connects the heating boiler and the pipe system.

Description

Complete, pre-assembled and tightness-tested heating pump assembly with all required functional components, form-fit insulation and wall mounting unit.

The pump line (flow/hot) consists of:
- Combination valve with thermometer in the hand wheel (red mark, range 0/120 °C)
- Ball valve below the pump
- Pipe for length compensation with screw connection
- System connection G1½ male (boiler), G1 female (heating circuit)
Suitable for pumps DN 25 with G1½ x 180 mm.

The return line consists of:
- Combination valve with gravity brake, thermometer in the handle (blue mark, range 0/120 °C)
- Pipe for length compensation (pump/mixer) with screw connection
- System connection G1½ male (boiler), G1 female (heating circuit)

Technical specifications

Axis distance
125 mm

System connections
Boiler G1½ males, heating circuit G1 female

Operating temperature range
Medium: T_{max} = 110 °C

System pressure
Max. 10 bar

Flow coefficient Kvs
4.8 m^3/h

Insulation
Polypropylene EPP

Dimensions
W x H x D: 250 x 475 x 152 mm

Options
- Mixer and actuator, can be retrofitted
- Other circulation pumps

Page 180

7
Application

Heating pump assembly for use in mixed heating circuits. With the 3-way mixer and the actuator, the flow temperature can be adjusted to a desired temperature by adding water from the return. The new mixer with adjustable flow coefficient Kvs offers the HVAC professional maximum flexibility in adapting the system to individual control requirements. The flow coefficient Kvs can be modified at any later point in time, even if the system is under pressure. This way, a great variety of mixer/pump assemblies can be covered with a single version. PrimoTherm® 180-2 is also available as version RTA. It can be used to increase the return temperature with solid fuel boilers which have a controller for increasing the return temperature.

Description

Complete, pre-assembled and tightness-tested heating pump assembly with all required functional components, form-fit insulation.

The supply line consists of:
- Combination valve with thermometer in the hand wheel (red mark, range 0/120 °C)
- Ball valve below the pump
- 3-way mixing valve ARV 325 KVS Vario with adjustable flow coefficient Kvs and ProClick adapter system
- Maintenance-free, silent actuator ARM 343 (6 Nm, 120 s, AC 230 V) with 0/90° angle of rotation, indication for direction of rotation, selector key "Manual/Automatic Mode" and ProClick adapter system
- System connection G1½ male (boiler), G1 female (heating circuit)

Suitable for pumps DN 25 with G1½ x 180 mm.

The return line consists of:
- Combination valve with gravity brake, thermometer in the handle (blue mark, range 0/120 °C)
- Pipe for length compensation with screw connection
- T piece for mixer connection
- System connection G1½ male (boiler), G1 female (heating circuit)

Difference version RTA
- Interchanged colour codes of thermometers
- 3-way mixer wit flow coefficient Kvs 12 m3/h (not adjustable)
- System connection (storage) with additional connection flanges G1 female
- Additional mounting bracket for upside down or lateral mounting
- Scope of delivery does not include pump

Heating pump assembly PrimoTherm® 180-3 DN 25 RTA

- **For increased return temperature with solid fuel boilers**
- **With temperature-controlled condensation protection valve**
- **For reduced amounts of condensate in the combustion process**
- **Avoids deposits in the boiler and in the smoke vent**

ErP ready

Application

Heating pump assembly for automatically controlling the return temperature of the system water to the heat generator to the value adjusted in the valve. An integrated, temperature-controlled condensation protection valve is the connection between the solid fuel heating system and the heating circuit or the hot water storage tank. Using PrimoTherm® 180-3 RTA keeps the temperature in the heating boiler above the condensation point in all operating states. This avoids deposits in the boiler and in the smoke vent and increases the service life of the system; corrosion damage of the heating boiler and chimney fires caused by soot deposits are avoided.

Description

Complete, pre-assembled and tightness-tested heating pump assembly with all required functional components, form-fit insulation and wall mounting unit. With an additional mounting bracket, the unit can be mounted in any position (vertically/horizontally).

The <u>pump line</u> (return) consists of:
- Combination valve with thermometer in the hand wheel (blue mark, range 0/120 °C)
- Ball valve above the pump
- 3-way mixing valve with fixed mixing temperature 60 °C
- System connection G1 female (boiler), G1 female (storage)
Suitable for pumps DN 25 with G1½ x 180 mm.

The <u>flow line</u> (hot) consists of:
- Combination valve with gravity brake, thermometer in the handle (red mark, range 0/120 °C)
- Pipe for length compensation with screw connection
- System connection G1 female (boiler), G1 female (storage)

Function principle
Start mode (heating up of boiler):
When the boiler heats up, the condensation protection valve is fully closed in the direction of the consumer. The liquid coming from the boiler is recirculated in the small circuit via the bypass, which causes the boiler temperature to increase more rapidly.
Transition phase:
When the opening temperature is reached (60 °C), the circuit to the consumer is opened proportionally and the bypass is reduced accordingly. However, the boiler temperature will not drop below the set temperature.

Regular operation:
During further operation, the temperature increases until the condensation protection valve is fully open (return storage A). The bypass (B) is closed correspondingly. If the inlet temperature (return storage A) drops to approx 10 °C above the set opening temperature, the admixture via the bypass (B) is increased proportionally and outlet A is closed proportionally.

Charging unit RTA 60 DN 25

- **For storage tank charging with solid fuel boilers**
- **Compact unit for limited space conditions**
- **With temperature-controlled condensation protection valve**
- **Avoids deposits in the boiler and in the smoke vent**

ErP ready

Application

Charging unit for direct connection between a solid fuel boiler and a heating system or a hot water storage tank. The compact design allows for mounting to the pipes between the solid fuel boiler and the storage even if space is limited. Using the charging unit RTA 60 DN 25 WP RTA keeps the temperature in the heating boiler above the condensation point in all operating states. This avoids deposits in the boiler and in the smoke vent and increases the efficiency and the service life of the system. The risk of corrosion damage to the boiler and chimney fires resulting from soot deposits is reduced.

Description

Complete, pre-assembled and tightness-tested charging unit with all required functional components. The compact insulation contains a central carrier with a high energy efficiency pump. The probe systems of the three thermometers held by the insulation are in the corresponding receptacles of the carrier after mounting. The thermal condensation protection valve and a check valve that can be shut off are contained inside the carrier. Ball valves with connection threads G1 female are screwed to the three system connections.

Function principle

Start mode (heating up of boiler)
When the boiler heats up, the condensation protection valve is fully closed in the direction of the consumer. The liquid coming from the boiler is recirculated in the small circuit via the bypass, which causes the boiler temperature to increase more rapidly.
Transition phase
When the opening temperature is reached (60 °C), the circuit to the consumer is opened proportionally and the bypass is reduced accordingly. The boiler temperature increases and heat is provided to the consumer; however, the return temperature will not fall below the set temperature.
Regular operation
During further operation, the temperature increases until the condensation protection valve is fully open (return storage A).
The bypass (B) is closed correspondingly. If the inlet temperature (return storage A) drops to approx 10 °C above the set opening temperature (e.g. 65 °C), the admixture via the bypass (B) is increased proportionally and outlet A is closed proportionally.

Efficient solar thermal systems are taking centre stage in heating system design as a result of rising energy costs, new legislation and, most important, increasing environmental awareness. Advanced solar thermal systems can be easily integrated into the heating system concepts for new buildings and for the conversion of existing systems.

AFRISO offers a comprehensive range of components for solar thermal systems for maximum reliability – all from a single supplier. The innovative solar pump assemblies PrimoSol® are made to meet the requirements of the solar systems available on the market.

The pre-assembled, tightness-tested and heat-insulated assemblies are extremely easy and fast to install. The offer is complemented by a comprehensive range of accessories.

i

We provide a great variety of customer-specific solar pump assemblies for OEMs.

AFRISO

Solar pump assembly PrimoSol® 130

PrimoSol® 130-4

- ▪ **Pre-assembled, tightness-tested and heat-insulated assembly**
- ▪ **Available with flow meter with ball valve, integrated filling and flushing unit and vent pot for degassing the heat transfer fluid in the flow line**

PrimoSol® 130-1

Application

Solar pump assembly/line for connection of collector and storage tank in intrinsically safe, sealed solar thermal systems. PrimoSol® 130 circulates heat transfer fluids such as water/glycol mixtures in the system.

Description

Complete, pre-assembled and tightness-tested solar pump assembly/line with all required safety and functional components, including form-fit insulation.

Depending on the version, the <u>pump line</u> (return/cold) consists of:
- ▪ Circulation pump
- ▪ Flow meter with ball valve for shut-off, pump end with flange and union nut G1½. Measuring range: 2–12 l/min. With integrated filling and flushing unit, system connection: G¾ male thread.
- ▪ Combination valve with system connection G¾ male thread, pump end with flange and union nut G1½. With adjustable gravity brake and thermometer in the hand wheel (blue mark, range 0/120 °C).
- ▪ Safety group assembly with connection for expansion vessel. With solar safety valve 6 bar, outlet Rp¾ female thread, pressure gauge Ø 63 mm, 0/10 bar, mounting valve.

The <u>flow line</u> consists of (130-4 only):
- ▪ Combination valve with adjustable gravity brake and thermometer in the handle (red mark, range 0/120 °C) with system connection G¾
- ▪ Vent pot to remove the gas from the heat transfer fluid with system connection G¾. Transparent hose 200 mm as venting aid.

The insulation is also used to package the product for protected transport.
The safety valve of the safety group assembly complies with Pressure Equipment Directive 2014/68/EC.

Vents for solar thermal systems

Quick air vents for solar systems

Quick air vents for solar systems with ball valve

Air separator

Description

Quick air vent for use in solar thermal systems with operating temperatures of up to 150 °C and operating pressures of up to 6 bar. Housing made of high-precision turned brass, functional parts made of highly temperature-resistant plastic. Connection G$\frac{3}{8}$ with O ring seal.

Quick air vent for use in solar thermal systems with operating temperatures of up to 150 °C and operating pressures of up to 6 bar. Housing made of high-precision turned brass, functional parts made of highly temperature-resistant plastic. Completely assembled with ball valve as shut-off unit. Connection G$\frac{3}{8}$.

Air separator for use in solar thermal systems or in sealed heating systems as per EN 12828 with operating temperatures of up to 150 °C and operating pressures of up to 6 bar. The air separator removes the air from the heat transfer fluid. The air collects in the housing and can be released via a quick air vent or a manual vent valve connected at the G$\frac{3}{8}$ threaded connection. Compression fitting for Cu pipe Ø 22 mm at both ends.

AFRISO

Air separator combination Solar LKS, collector tank for solar liquid

Air separator combination Solar LKS

Collector tank for solar liquid

Application

For use in thermal solar systems to remove air bubbles from the solar liquid.

Collects groundwater polluting solar liquid in the case of system overpressure.

Description

Air separator, completely pre-assembled with quick air vent for solar systems. The air separator removes the air contained in the heat transfer medium. The air collects in the housing and can be released via the quick air vent for solar systems connected at the G³⁄₈ connection by actuating the ball valve.

Collector tank for solar liquid with integrated drain valve. Volume 10 l. The collector tank for solar liquid is connected to the diaphragm safety valve MSS or to the safety group assembly PrimoSol® of the solar pump assembly via a pipe. In the case of system overpressure, it collects escaping solar liquid. A basic volume of 1 to 1.5 l of liquid is always contained in the collector tank to avoid overheating of the collector tank if solar liquid escapes suddenly from the solar thermal system.

8

Application

Controls the temperature of individual rooms in connection with manifold systems for heating and cooling.

Description

The base version of the single room temperature controller CosiTherm® wired consists of a base module, at least one controller module with two or six independent control circuits and a corresponding number of room temperature sensors. The controller modules can be interconnected in a modular way to account for the number of control circuits/rooms. One room temperature sensor is required per control circuit; it is wired to the controller module. The room temperature sensor measures the actual temperature in the room. The reference temperature is adjusted via the rotary knob of the room temperature sensor. The controller module compares the actual temperature and the reference temperature and controls the volume flow of the heating/cooling water via the thermostatic actuators of the manifold system.

An optional timer module with display and an integrated hundred-year calendar can be plugged into the base module. It features two independently programmable switching channels for temperature reduction, nine programmable memory blocks and a valve and pump protection function. The additional pump running time is adjustable. The terminals of the controller modules are colour-coded for easy assignment to the wires; in conjunction with the DIN rail snap connectors at the rear of the housing, this facilitates installation.

Functions

Base module BM
- Power supply of the room temperature sensors (DC 5 V)
  and thermostatic actuators (AC 230 V)
- Switchover of the system to "Heating" or "Cooling"
- Control of the heating/cooling pumps

Controller module
- Comparison of actual and reference temperatures
- Control of heating/cooling water via connected thermostatic actuators
- Connection of two or six control circuits, extensible as required
- Wired connection of room temperature sensors

Timer module UM (option)
- Time data: Date, time, weekday (leap year detection)
- Automatic switching between daylight saving time and winter time (CEST)
- Temperature reduction adjustment
- Additional pump running time adjustment
- Valve and pump protection function adjustment

Timer module (option) for programming and display of date, time, weekday.

Application

Determination of the actual ambient temperature and adjustment of the reference value for the room temperature.

Description

The room temperature sensor D transmits the actual ambient temperature as well as the reference room temperature via the connection wire to the single room temperature controller CosiTherm®. The reference value for the room temperature is adjusted by means of the integrated rotary knob. The actual temperature in rooms with an underfloor heating system is compared to the reference temperature on an ongoing basis. If there is a difference, the single room temperature controller CosiTherm® adapts the volume flows of the heating/cooling water via the thermostatic actuators of the manifold system.

Single room temperature controller CosiTherm® Wireless

- **Controller terminal bar for connection of actuators**
- **For manifold systems for heating and cooling**
- **Worldwide access via the AFRISOhome gateway**

A Page 118 A Page 116 A Page 213

Application Controls the temperature of individual rooms in connection with manifold systems for heating or cooling. EnOcean® wireless technology for integration into building automation systems.

Description The base version of the single room temperature controller CosiTherm® Wireless consists of a base module, at least one controller module with two or six independent control circuits and a corresponding number of room temperature sensors. The controller modules can be interconnected in a modular way to account for the number of control circuits/rooms. One room temperature sensor is required per control circuit; the standard version is battery-less and connected to the controller module via the EnOcean® wireless technology. The room temperature sensor measures the actual temperature in the room. The reference temperature is adjusted via the rotary knob of the room temperature sensor or via the app AFRISOhome. The controller module compares the actual temperature and the reference temperature and controls the volume flow of the heating/cooling water via the thermostatic actuators of the manifold system.

The base module features two independently programmable switching channels for temperature reduction, nine programmable memory blocks and a valve and pump protection function. The additional pump running time is adjustable. The terminals of the controller modules are colour-coded for easy assignment to the wires of the thermostatic actuators; in conjunction with the DIN rail snap connectors at the rear of the housing, this facilitates installation.

With an AFRISOhome gateway, it is possible to remotely check and, if necessary, adjust the room temperatures via the AFRISOhome app (for example, when coming back from winter vacation). This flexible remote control of the room temperature combines multiple benefits: you can increase living comfort and reduce energy costs.

In conjunction with additional AFRISO smart home products with EnOcean® wireless technology, the user can configure a whole range of fully customisable, extensible applications.

Functions **Base module BM**
- Power supply of the thermostatic actuators (AC 230 V)
- Switchover of the system to "Heating" or "Cooling"
- Control of the heating/cooling pumps

Controller module
- Comparison of actual and reference temperatures

- **No cables required (operation via photovoltaic cell or battery)**
- **Flexible location-independent use anywhere in buildings**

A Page 210 A Page 118 A Page 116
reddot award 2014 winner

Application Determination of the actual ambient temperature and adjustment of the reference value for the room temperature.

Description The room temperature sensor FT transmits the actual ambient temperature as well as the reference room temperature via the integrated EnOcean® wireless module to the single room temperature controller CosiTherm® Wireless or to the AFRISOhome gateway. The reference value for the room temperature is adjusted by means of the integrated rotary knob.
The actual temperature in rooms with an underfloor heating system is compared to the reference temperature on an ongoing basis. If there is a difference, the single room temperature controller CosiTherm® Wireless adapts volume flows of the heating/cooling water via the thermostatic actuators of the manifold system. The energy required to send reference temperature and actual temperature values is generated by means of an integrated photovoltaic cell; it is also possible to use a standard battery. The AFRISOhome gateway transmits alarm messages and changes in temperature and/or humidity via WLAN or LAN to the person in charge (for example, to the owner, the facility manager, the janitor or other configured contacts); the message includes information on which room temperature sensor has signalled the change. The AFRISOhome gateway in conjunction with additional AFRISO smart home products with EnOcean® wireless technology allows the user to configure a whole range of fully customisable, extensible applications.

Single room temperature controller FloorControl controller terminal bar WB 01 – wired

NEW

- **Controller terminal bar for connection of actuators and room thermostats**
- **For manifold systems for heating and cooling**
- **Suitable for room temperature sensors series RT – wired**

A	A	A
Page 220	Page 219	Page 218

Application

Controls the temperature of individual rooms in connection with manifold systems for heating (cooling function depends on room temperature sensor used).

Description

The single room temperature controller FloorControl is a complete system consisting of a terminal block with the corresponding number of room thermostats. The controller terminal bar has eight control circuits. One room thermostat is required per control circuit; it is wired to the controller terminal bar. Up to four thermostatic actuators can be connected to each of the control circuits 1 to 3; a maximum of two actuators can be connected to the thermostatic actuators 4 to 8.

The room thermostat measures the actual temperature in the corresponding rooms. The reference temperature is adjusted by means of the keys of the room thermostat. The room thermostat then switches the thermostatic actuator via the controller terminal bar to control the heating circuit at the manifold.

Functions and features

Controller terminal bar WB 01
For controlling the reference temperature. Versions:
- WB 01 D-8-24: Power supply for the thermostatic actuators (DC 24 V) and supply of the contacts of the room thermostat (battery operation only)
- WB 01 D-8-230: Power supply for the thermostatic actuators (AC 230 V) and supply of the contacts of the room thermostat (AC 230 V or battery operation only)

Application
Mechanical room thermostats for domestic applications. On-wall wall mounting allows for retrofitting.

Description
The temperature measured at the probe causes a change in the volume of the measuring liquid. The force acting triggers electrical switching. For optimum temperature control, the room thermostat should be installed at an inside wall opposing radiators. Install the room thermostat away from heat source of all kinds and from draft and do not expose it to sunlight. The best installation height is approx. 1.5 m above the floor.

A

Application

For controlling the hot water valves in radiators or AFRISO distribution manifolds such as heating/cooling circuit manifolds ProCalida® MC, EF and VA or industrial manifolds IN. Actuators convert the electrical signal received from room or timer thermostats into a valve stroke to control the set temperature via the flow volume.

The actuator is factory-opened (First Open function) so that the stroke vales at the heating circuit manifold remain open during initial commissioning. This facilitates mounting as well as filling and flushing of the system since, at this point in time, the control system is usually not yet operative. The First Open function (FO) is automatically disables (Auto Spin function) as soon as the actuator is electrically connected and fully closed. The FO function can also be disabled manually by turning the upper hand wheel to the left by 90° to set automatic mode at the actuator.

For servicing, the factory setting "open" of the actuator can be restored manually via the hand wheel without power having to be applied (Re-Open function). The slim design (housing diameter 39 mm) allows for installation to manifolds with a heating circuit distance of 40 mm.

Description

Electro-thermostatic actuator with First Open and Re-Open functions, position indication, connection cable and union nut for direct connection to the valve or upper part of the valve. Closed when de-energised; available as 24 V or as 230 V version.

Technical specifications

Functions
First Open and Re-Open functions
(adjustable via hand wheel),
Auto Spin function

Operating mode
Closed when de-energised (NC)
Condition as delivered: Open

Stroke
> 3.2 mm
Indication via rod
Actuating force 90 N or 110 N

Opening time
Approx. 5–6 minutes

Operating temperature range
Ambient: Max. 60 °C

Supply voltage
AC/DC 24 V or AC 230 V
Power: 2 W

Connection
Union nut M30 x 1.5 mm

Closing dimension
10.8 mm

Cable length
1 m

Housing
Plastic
Degree of protection IP 54 (EN 60529)

Dimensions
H x Ø: 72 x 39 mm

AFRISO

Thermostatic actuator TSA-03

- Stroke indicator via grey rod on cap
- With integrated limit switch for circulation pump
- Either as 24 V or as 230 V version
- Compact design

Page 214
Page 225

Application

For controlling the hot water valves in radiators or AFRISO distribution manifolds such as heating/cooling circuit manifolds ProCalida® MC, EF and VA or industrial manifolds IN. Actuators convert the electrical signal received from room or timer thermostats into a valve stroke to control the set temperature via the flow volume.
The actuator is factory-closed and thus ready for automatic operation.

Description

Electro-thermostatic actuator with position indication, limit switch, connection cable and union nut for direct connection to the valve or upper part of the valve. Closed when de-energised. TSA 03 can be used to switch off the pump via the integrated limit switch when all valves are closed.

Technical specifications

Operating mode
Closed when de-energised (NC)

Stroke
> 3.2 mm
Indication via rods on hood

Opening time
Approx. 5–6 minutes

Operating temperature range
Ambient: Max. 60 °C

Supply voltage
AC/DC 24 V or AC 230 V
Power: 2 W

Switching output
1 voltage-free, normally open contact

Contact rating
AC/DC 24 V, max. 6 A / 2 A
AC 230 V, max. 6 A / 0.1 A

Connection
Union nut M30 x 1.5 mm

Closing dimension
10.8 mm

Cable length
1 m

Housing
Plastic
Degree of protection IP 40 (EN 60529)

Dimensions
H x W x L: 57 x 39 x 52 mm

AFRISO

Single room controller RTL-Box 324 Vario with return temperature limiter

- **Very compact visible plate (11.5 x 13.5 cm) made of high-gloss plastics**
- **Elegant, compact control head**
- **Exact alignment with mounting wall due to depth-adjustable mounting frame**
- **Aesthetic design allows for user-friendly mounting at the level of the light switches**
Application

For decentralised temperature control in individual rooms with underfloor heating systems or wall heating systems in combination with radiator installation. Ideal for scenarios without radiator installation and if no centralised distribution is desired. The RTL-Box 324 Vario combines heating circuit, room temperature sensor and control in a single unit. The purely mechanical function of the room controller requires neither additional electrical power nor actuators nor similar equipment. Due to the compact dimensions and the aesthetic design, the RTL-Box fits perfectly at the level of light switch installations. This ensures optimum control characteristics and excellent user-friendliness.

Description

The single room controller RTL-Box 324 Vario consists of a high-grade, high-gloss cover plate made of sturdy plastic, an aesthetic thermostat control head and a mounting frame. The mounting frame adapts to the wall and levels a height of up to 25 mm. The optional extension kit extends the thermostat head by 20 mm if the maximum wall level height is exceeded. The wall installation box with shell protection comprises an adjustable valve assembly consisting of a control valve, a thermostat valve and a return temperature limiter for limiting the radiator return temperature to a temperature level suitable for the underfloor heating system. The valve opens when the values falls below the adjusted limit value. The pipes of the underfloor heating system are mounted in the wall installation box by means of standard compression fittings.

Technical specifications

Temperature adjustment range
Reference: 8/28 °C (room temperature)
Return temperature: 20/48 °C

Operating temperature range
Medium: T_{max} = 90 °C

AFRISO

Stainless steel heating circuit manifold ProCalida® VA 1C Vario-DP with dynamic control valve for hydraulic balancing

Valve pre-adjustment
The dynamic control valve Vario-DP is fully adjustable with a standard radiator bleed screw key. The numerical scale with intermediate points allows for precise adjustment of the calculated values (e.g. from the AFRISO TOOLBOX app) in the flow range from 20–340 l/h.
Thermostatic actuators TSA-02/03
For electronic control of the return valves. Actuators convert the electric signal they receive from room thermostats or thermostats with timers into a valve stroke to control the set temperature. With connection cable and union nut for direct connection to the return line.

Patented control valve Vario-DP
With dynamic volume flow limiter for automatic hydraulic balancing. The control membrane is installed directly in the control valve and the valve spindle is used as the pressure sensor – therefore, there are no additional control components which might be subject to pollution.
The system Vario-DP operates with a standard valve gasket and does not require additional dirt filters.

Adhesive label
For easy designation of the heating circuits.

Ergonomic hand wheel
For fast opening and closing of the heating circuit.

Wall bracket
For fast, safe and easy installation of manifold systems.

End cap / end piece
The manifold end is equipped with a plastic end piece for filling and draining. The surface heating/cooling system can be subjected to a pressure test prior to commissioning via the opening of the end cap. For this purpose, AFRISO offers the CAPBs® set PT 70-FBH, a flexible testing system for tightness tests with a suitable adapter.

Ball valve
High-grade ball valve DN 25, with or without thermometer.

8

Stainless steel heating circuit manifold ProCalida® VA 1C Vario-DP

NEW

- **Dynamic control valves for controlling the water volume**
- **Fast and safe mounting with union nut (flat-sealing)**
- **Sound-absorbing plastic wall bracket with quick mounting function**
- **100 % tightness-tested and function-tested**

A	A	A	A
Page 220	Page 214	Page 230	Page 231

Application

Manifold system for surface heating systems and cooling systems with dynamic control valves for constant control of the water volume. For distribution of heating and cooling circuit water as per VDI 2035 or of water/glycol mixtures in sealed systems. Suitable for 2–12 heating/cooling circuits.

Description

Stainless steel heating circuit manifold with polished surface. Return with dynamic control valve for constant control of the water volume in each heating circuit. Return valves with dual O ring seal at the valve axis. The control range is 20–340 l/h. The typical manual adjustment of the valves is therefore no longer required. Connection by means of angular connection pieces and/or ball valve G1. End module with filling and drain valve G¾ eurocone which can also be used for manual venting. Easy mounting by means of plastic wall bracket with excellent sound-absorbing characteristics and with quick mounting function – the manifold is snap-mounted to the wall bracket. Suitable for standard manifold cabinets. With a sufficient distance between the flow and return bars, for easy, collision-free mounting even in the case of large actuator and heating circuit pips up to 20 mm. AFRISO stainless steel manifold systems are 100 % tightness-tested and function-tested.

8

Technical specifications

Number of heating/cooling circuits
2–12

Medium
Heating circuit water and cooling water as per VDI 2035 (Water/glycol mixtures with an admixture of max. 50 %)

Test pressure
Max. 6 bar

Manifold pipe
Stainless steel 304 (1.4301)

Main connection
G1 flat-sealing, with union nut
Connection from the right or from the left

Connection heating/cooling circuit
G¾ male thread, eurocone suitable for standard compression fittings

Operating temperature range
Medium: -20/+90 °C at 3 bar
-20/+80 °C at 4 bar
-20/+70 °C at 5 bar
-20/+60 °C at 6 bar

Wall bracket
Impact-resistant plastic with rubber support, complies with DIN 4109, suitable for standard manifold cabinets
Bar distance: 220 mm

Flow valves
Can be shut off

Dynamic return valves
Mating thread: M30 x 1.5 mm Male thread
Closing force: < 80 N
Closing dimension: 12 +/- 0.6 mm (open position 15 mm)
Adjustment range: 20 to 340 l/h
Operating range: 50 to 700 mbar
Dynamic control range: 150 to 700 mbar

Suitable for electro-thermostatic actuators TSA-02/-03 from AFRISO or for standard actuators with union nut M30 x 1.5 mm

i
Customised versions (Private Label) available at a lot size of 2,000 manifolds per year.

AFRISO

Stainless steel heating circuit manifold
ProCalida® VA 1C Vario-DP

NEW

i

Dynamic control valve –
for automatic hydraulic balancing

Advantages – your benefits

➕ Automatic control of water volume per heating circuit

➕ Fast hydraulic balancing

➕ Adjusted flow rate is not exceeded

➕ High reserve due to very wide adjustment range up to 340 l/h

➕ Geometry of valve insert provides protection against unwanted pollution

➕ No additional line fittings required for balancing of the individual stations or floors

8

Pump assembly PrimoTherm®
Floor 130 for manifold systems

NEW
- **Pre-assembled and tightness-tested assembly**
- **Flow temperature fully adjustable between 35 and 60 °C**
- **Mixing valve cap with window and scale, can be lead-sealed (ideal for public facilities)**
- **With shut-off ball valves**
Mixing valve control knob with temperature scale

A
Page 226
Application

Pump assembly for constant control of the flow temperature of water-based surface heating systems. With the integrated thermostatic mixing valve, the flow temperature can be adjusted to a desired temperature by adding water from the return. Due to the eccentrical screw connection with variable distance, PrimoTherm is suitable for almost all manifold systems.

Description

Complete, pre-assembled and tightness-tested pump assembly with all required functional components, including shut-off ball valve DN 20. The required flow temperature is set within a range from 35 to 60 °C at the thermostatic mixing valve mixing valve ATM 563. A cover that can be lead-sealed protects the control knob against improper adjustments during operation. The selected adjustment is visible through the window in the cap. The new chamber geometry also helps to avoid damage caused by overpressure during closing (backflow preventer to return).

The circulation pump automatically switches off if a safety-related temperature limitation is exceeded. It is adjustable between 20 to 60 °C; the factory setting is 55 °C. This helps to prevent damage to the underfloor heating system. The pump features the following operating modes:
- Constant volume flow
- Constant pressure
- Venting function of pump housing

In venting mode, the entire surface heating/cooling system can be conveniently vented by means of the valve integrated in the pump assembly and the enclosed vent hose.

AFRISO

OEM manifold systems ProCalida®
for heating/cooling and geothermal applications

AFRISO has been manufacturing complex plastic manifolds for leading global vendors of floor heating, cooling and geothermal systems since 1981. The know-how, together with our exceptionally high degree of vertical integration including our own tool design allows us to implement even complex geometries to customer specifications.

High-grade plastic materials enable a great variety of technical features and optimum, practical designs. Plastic valves are not susceptible to corrosion and deposits. Thermometers, shut-off valves, vents and flow meters are easy to integrate. Our offering is complemented by a comprehensive range of accessories. For decades, experts from the fields of heating, ventilation and air conditioning have been working with AFRISO products under the brands of leading system providers.
8

Advantages – your benefits

- Complex, customised manifold systems made of high-grade plastic materials proven over many years
- For heating, cooling and geothermal systems
- Numerous combinations in terms of type and number of heating circuits
- Pre-assembled, tightness-tested and ready to be connected
- Excellent insulation properties (low heat emission and noise transmission; suppression of condensate)
- Corrosion-resistant for long service life
- Vast array of versions for numerous application scenarios and logistics concepts
- Can be combined with thermometers, flow meters, thermo-actuators, connection valves and many other components
- Low weight
- Simplified logistics
- Compatible control units

OEM manifold systems ProCalida®
for heating/cooling and geothermal applications
ProCalida® MC 1

Heating circuit manifold ProCalida® MC 1

Modular, very short, robust plastic heating circuit or cooling circuit manifold with up to 12 heating circuits. Return with stroke valves for actuators, flow with shut-off valves or flow meters as required. Temperature indication at flow and return lines. Main connection with union nut G1. Manual vent, filling and drain valve or quick air vent can be mounted. With dove-tail guide at both ends for fast mounting to wall mounting bracket and for maximum installation flexibility.

Heating circuit
Distance: 50 mm
Connection: G¾ eurocone

Operating temperature range
Medium: Max. 60 °C at 6 bar
or max. 90 °C at 3 bar

ProCalida® EF 1

Heating circuit manifold ProCalida® EF 1

Modular, very short plastic heating circuit or cooling circuit manifold with up to 12 heating circuits. Return with stroke valves for actuators, flow with shut-off valves or flow meters as required. Temperature indication at flow and return lines. Main connection with union nut G1. Manual vent, filling and drain valve or quick air vent can be mounted. Flexible connection from left or right as well as from the bottom with a bracket kit.

Heating circuit
Distance: 50 mm
Connection: G¾ eurocone

Operating temperature range
Medium: Max. 60 °C at 6 bar
or max. 90 °C at 3 bar

AFRISO

OEM manifold systems ProCalida®
for heating/cooling and geothermal applications

Heating circuit/geothermal manifold ProCalida® IN 1½/GT 1½

Modular plastic manifold for industrial or geothermal applications with up to 20 heating circuits. Return either with stroke valves for actuators or with shut-off valves, flow either with shut-off valves or with flow meters as required. Main connection with union nut G1½. Individual installation of filling and drain valve, quick air vent, pressure gauge and thermometer via multi-way union. Easy snap-on mounting of manifold on wall bracket.

ProCalida® IN 1½

Heating circuit
Distance: 70 or 100 mm
Connection: G1 flat-sealing, compression fitting
for pipe Ø 25 x 2.3/2.5 or Ø 32 x 2.9 and Ø
40 x 3.7 or G¾ eurocone

Operating temperature range
Medium: -20/+60 °C at 6 bar

Geothermal manifold ProCalida® GT 3

Modular manifold for brine, made of plastic, for any number of heating circuits. With one shut-off valve each in the flow and return (adjusted values can be locked via a ring) and integrated flow rate indication in the return. Main circuit connection and heating circuit connections can be made to customer specifications. Individual installation of filling and drain valve, air vent and pressure gauge via cross piece. Thermometer can be integrated in the line and/or in each individual heating circuit. Robust, easy-to-mount wall bracket.

Heating circuit
Distance: 80, 90, 100, 110, 130, 140, 150 or 160 mm
Connection:
Compression fitting for pipe Ø 25 x 2.3/2.5 mm
or Ø 32 x 2.9 mm and Ø 40 x 3.7 mm;
Customer-specific versions are also available
Individual heating circuits can be rotated by 360°

Operating temperature range
Medium: -20/+60 °C at 6 bar

Range (flow meter)
2–12 l/min, 5–42 l/min, 35–70 l/min, 60–125 l/min

ProCalida® GT 3

Drinking water manifold

Plastic drinking water manifold with 3, 4, 6 or 8 drinking water connections. Triple and quadruple versions also available in H shape (both ends). Another manifold can be connected to the outlet end.

Drinking water connections
Distance: 45 mm
Connection: PEX hose ½"
Inlet: ¾" or 1" PEX pipe
Outlet: ¾" or 1" PEX pipe, blind

Operating temperature range
Medium: max. 100 °C at 10 bar

AFRISO

Valves and control technology for radiators and hydraulic balancing

AFRISO offers a broad range of proven products comprising standard valve bodies with suitable thermostat control heads and lock-shield valves, combination blocks for compact radiators and adjustable radiator with measuring function for optimising existing heating systems and hydraulic balancing. Convincing solutions are also available for automatic hydraulic balancing with pressure-independent dynamic radiator valves.

GAMPPER Armaturen has been a member of the AFRISO group since 2012, contributing professional control technology and clever solutions for HVAC professionals to our product range. The brand GAMPPER has been a synonym for radiator fittings "Made in Germany" for more than 75 years.

Gampper
Member of AFRISO Group

Our comprehensive experience in the areas of domestic technology and building equipment and automation results from single-family home projects all the way to large-scale reference projects. GAMPPER assists planners with full-scale engineering in large projects: engineering data (such as VDI 3805 records), plant engineering or transparent project logistics via HVAC wholesalers. The OEM business covers the entire range from custom-specific development to production at the Alsenz site. Decades of cooperation in associations and institutions working on and preparing standards and legislation ensure that our products are state-of-the-art.

Gampper is:

- The first manufacturer who used virtually maintenance-free O rings instead of high-maintenance packings to seal the valve spindle of manual valves.

- The inventor of the radiator lockshield valve that can be shut off, adjusted and drained.

- The first manufacturer of thermostat valves to receive the top grade for control performance from "Stiftung Warentest", the renowned, independent German consumer organisation.

- The inventor of the patented, adjustable radiator thermostat valves VarioQ with measuring function that allow hydraulic balancing of existing heating, refrigeration and air conditioning systems.

- Numerous other innovations attesting to global success: patens for tap blocks and combination blocks for valve radiators or combined thermostat valves with integrated return temperature limiter for bathroom radiators and underfloor heating systems.

9

Patented thermostat valve VarioQ with fixed, calibrated orifice plate for high-precision adjustment of radiators.

Solutions for hydraulic balancing of existing systems:

1 Compact radiator with thermostat control head 323 and adjustable combination block VarioQ-Kombi with measuring function

2 Manifold system ProCalida® for underfloor heating system with screw fitting with measuring function Q

3 Valve radiator with adjustable thermostat valve body with measuring function VarioQ, thermostat control head 323 KH and radiator lockshield valve type 456

Hydraulic balancing: Highest efficiency, maximum energy saving and comfort

Has your heating system been balanced?

On its way to the radiators and back to the boiler, the hot water flow always chooses the path of least resistance. Due to this natural law, in heating systems without hydraulic balancing radiators further away from the pump are supplied with insufficient amounts of hot water while radiators close to the pump receive too much

hot water. Typical countermeasures such as increased pump capacities or higher flow temperatures do not improve this situation, but rather amplify the negative effects. Such systems consume much more energy than necessary without providing the expected convenience.

Consequences of lack of hydraulic balancing:

- Uneven heat release
- Heating times of rooms/apartments differ
- Thermostat valves cannot properly control the room temperature
- Limited frost protection
- Disturbing flow noise in valves and pipes
- Excessive power consumption due to oversized and/ or incorrectly set circulation pumps
- High losses when the heating system starts or is not used
- Low efficiency of condensing systems: Excessive flow through radiators close to the pump leads to high return temperatures and reduces the condensation effect (energy recovery during condensation of the flue gas)

9

What is hydraulic balancing?

Hydraulic balancing ensures optimum distribution of the water in the heating system. Based on the actual heat requirements of the building, the circulation pump, the control (flow temperature), the fittings and the valves are adjusted to change the volume flow in the pipes in such a way as to obtain the required flow resistance

for all radiators. This forces the hot water to flow through the system exactly as required. The right method and suitable components allow for considerable savings. In individual cases, this may amount to as much as 15% and more of the annual heating capacity.

System without hydraulic balancing

Low resistance = high flow rate

High resistance = low flow rate

AFRISO
Advantages – your benefits

- Convenience: Rooms are heated evenly
- Radiators respond quickly to new thermostat valve settings
- Maximum frost protection safety
- No flow noise in the heating system
- Heating system/pump operate with maximum efficiency to save energy
- Increased system reliability
- Improved energetic quality of the building
- Reduced energy consumption saves money and protects the environment due to less emission

Legal obligations hydraulic balancing

In Germany, hydraulic balancing is mandatory, as stipulated by the German VOB, part C (German Construction Contract Procedures), and DIN 18380. The German EnEV (Energy Savings Ordinance) also requires hydraulic balancing for all new and renovated heating systems.

9

Fast and easy hydraulic balancing

In existing buildings, hydraulic balancing often involves a lot of estimating and approximation since precise information on the pipe system is unavailable. In old buildings, the lengths and diameters of pipes are often not sufficiently documented, the pipe systems have been changed or there are different levels of renovation. In such cases, a fundament prerequisite is missing.

AFRISO offers two systems for hydraulic balancing. In both cases, the heating system expert adjusts the heat distribution directly at

each radiator by limiting the amount of hot water at the adjustable thermostat valves - without additional adjustment fittings. The decision as to which system is most suitable for a given building depends on a variety of factors and requirements:

Automatic hydraulic balancing for the HVAC professional

The system Vario-DP

Pre-adjustable thermostat valves Vario-DP with patented dynamic valve insert for automatic limitation of the water volume set at the valve. Vario-DP controls the water volume independent of pressure variation in the heating system.
This means that Vario-DP always supplied the right water volume to the radiator, regardless of the number of open or closed thermostat valves in the system.

Your benefits:

- Automatic control of water volume
- Adjusted flow rate is not exceeded
- Building type: Primarily for single-/two-family homes, residential buildings
- Fast hydraulic balancing without measuring instrument
- Wide range of products, easy planning
- High reserve due to very wide adjustment range up to 340 l/h
- Geometry of valve insert provides protection against unwanted pollution, failure due to blocking is practically impossible

Valve range Vario-DP

The control membrane is installed directly in the valve insert and the valve spindle is used as the pressure sensor – therefore, there are no additional control components which might be subject to pollution. The valve operates with a standard valve gasket and does not require additional dirt filters.

9

AFRISO

Hydraulic balancing with measurement function for the HVAC system planner

The triple-stage VarioQ system

The pre-adjustable VarioQ thermostat valves with measurement function allow for an even more precise approach to hydraulic balancing. The triple-stage system optimises the heating system on the basis of calculation, measurement and adjustment. Thanks to an integrated, fixed orifice plate, it is possible to directly measure the current flow and adjust the calculated water volume at each radiator valve or at the lockshield valve.

Your benefits:

- Precise measurement and adjustment of the required water volume per radiator
- Building type: Primarily for public buildings, schools, administration buildings and generally for larger heating systems
- Reliable procedure for larger and complex heating systems
- Measurement option at the valve for documentable and verifiable adjustment
- Time and cost savings: Neither dynamic valves nor line fittings are required
- Up to 80 % savings with regard to pump capacity as compared to automatically balanced heating systems
- Further optimisation potential due to, for example, fewer burner starts or increased condensing effect
Valve range VarioQ

The fixed orifice plate of VarioQ allows for the precise adjustment of the water volume at the valve of the radiator.
The pre-adjustable thermostat valves feature a fixed, calibrated orifice plate for adjustment of the volume flow directly at the valve.

EuroSoft live
Applet Hydraulic Balancing

Free iOS and Android app for measurement and adjustment of radiator valves VarioQ and line fitting during hydraulic balancing. All AFRISO VarioQ valves can be directly selected. Building data and customer data can be entered within the app and users will get a measurement record in PDF format.

Measuring instrument
CAPBs® set valve balancing

PT 85 measures the flow rate in litres per hour and the required water volume determined via the app can be easily set at the valve without conversion.

9

App EuroSoft live –
Applet hydraulic balancing

NEW
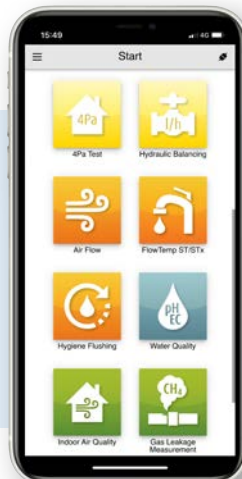

- **Free iOS and Android app for measurement and adjustment of radiator valves and line fitting during hydraulic balancing**
- **AFRISO valves can be directly selected – third-party valves can be measured after Kvs flow coefficient Kvs has been entered**
- **Menu-guided measuring procedure**
- **Building data and customer data can be entered**
- **Measurement records in PDF format**

live

Application

The applet hydraulic balancing is the free in-app for measurements with the AFRISO CAPBs® sets valve balancing and line balancing.

Description

With the applet hydraulic balancing, the app EuroSoft live allows for easy, menu-guided measurement of the volume flow directly at the valve of the heating surface. The AFRISO valve data stored in the applet facilitate the measuring process. In conjunction with the CAPBs® sets for hydraulic balancing, an intuitive and smart measuring system is created. Individual inspection measurements as well as a complete hydraulic balancing procedure can be carried out quickly and easily. Comment fields, photograph attachments and the signature function complete the final PDF documentation. With the familiar smartphone or tablet functions, the measurement reports can be processed or shared in a matter of seconds.

Functions

- "Step by step" instructions
- Selection of measurable AFRISO radiator valves and lockshield valves
- Creation of valves and line fittings based on valve type, design and flow coefficient Kvs
- Flow measurement and adjustment of the required volume flows in l/h

- PDF record with valve adjustment value, comment, photograph and customer signature
- Export and sharing via e-mail or messengers

Thermostat valve bodies VarioQ

- **Fixed, calibrated orifice plate for accurate adjustment of the radiator**
- **Fully adjustable**
- **Valve insert can be replaced without system having to be drained**
- **Lightning-fast hydraulic balancing with CAPBs® set valve balancing**

A Page 248
A Page 269
A Page 274

Application

For measuring and adjusting the volume flow directly at the valve, e.g. with the CAPBs® set valve balancing as measuring instrument for hydraulic balancing. Suitable for small, medium and large water volumes. For installation in dual-pipe heating systems. Design as per standard, therefore, installation in existing systems without changes to the connection pipes.

Description

Patented, low-noise thermostat valve body with fixed, calibrated orifice plate for measuring and adjusting the volume flow directly at the valve. Mounting cap with valve shut-off function. Threaded connection M30 x 1.5 mm for thermostat control heads and actuators. Fully adjustable with ES-SV adjustment key. Valve spindle with double O ring seal. The valve insert can be replaced with the MGV mounting unit at operating pressure without the system having to be drained.

VarioQ is a triple-stage hydraulic balancing system which allows for optimisation of the heating pipe system by means of calculation, measurement and adjustment. The CAPBs® set valve balancing (measuring instrument) measures the flow rate in litres per hour and the water volume can be easily set at the valve without conversion. Even minimum flow rates can be set with this system.

- **Individual radiators can be shut off without the heating system having to be drained**
- **Lightning-fast hydraulic balancing with CAPBs® set valve balancing**

A — Page 248
A — Page 253
A — Page 273

Application

For measuring the volume flow directly at the screw fitting, e.g. with the CAPBs® set valve balancing for hydraulic balancing. Suitable for small and medium water volumes. For installation in single-pipe and dual-pipe heating systems. Adjustments are made e.g. via the adjustable dynamic thermostat valve Vario-DP in the flow.

Description

Radiator lockshield valve with measuring function type 454Q with drain and adjustment function. Measurement via an integrated, fixed and calibrated orifice plate. With cap to protect against incorrect operation. The optional filling and draining unit FEV 03 with hose connection ½" can be used for easy and fast draining.

The radiator lockshield valve is a part of the product range for the triple-stage balancing system VarioQ which allows for optimisation of the heating pipe system by means of calculation, measurement and adjustment. The CAPBs® set valve balancing (measuring instrument) measures the flow rate in litres per hour. Even minimum flow rates can be set with this system.

Screw fittings with measuring function Q

- **Measuring insert with fixed, calibrated orifice plate**
- **Ideal for hydraulic balancing of underfloor/heating circuit manifolds in existing buildings**

A
Page 248

Application

For measuring the volume flow, e.g. with the CAPBs® set valve balancing as measuring instrument for hydraulic balancing. The screw connection with measuring is ideal for underfloor heating manifolds/heating circuit manifolds.

Description

Compact screw fitting with measuring function, straight design, with fixed calibrated orifice plate for measuring the volume flow.

The optimum volume flow is to be determined by means of a heating load calculation program and can then be directly measured and adjusted with the CAPBs® set valve balancing. Adjustments are made via standard adjustment valves.

Dynamic thermostat valve bodies Vario-DP

- ▪ **Automatic control of water volume**
- ▪ **Fast hydraulic balancing without calculation of pipe system and measuring instrument**
- ▪ **High reserve due to adjustment range up to 340 l/h**
- ▪ **Patented, simple valve insert provides protection against pollution**

A Page 274   A Page 266   A Page 253

Application

Suitable for small to large water volumes. For installation in dual-pipe heating systems. The dynamic valve range Vario-DP makes hydraulic balancing in single and two family homes an easy and fast job.

Description

Low-noise thermostat valve body with threaded connection M30 x 1.5 mm for thermostat control heads and actuators. Mounting cap with valve shut-off function. Adjustment range 20 to 340 l/h, fully adjustable with standard heating system bleed screw key. Pre-adjustment directly readable without scale.

The patented valve insert with automatic flow limiter automatically limits the water volume adjusted at the valves, independent of pressure variation in the heating system. This means that Vario-DP always supplies the right water volume to the radiator, regardless of the number of open or closed thermostat valves in the system. The valve insert can be replaced with the MGV mounting unit at operating pressure without the system having to be drained.

Page 273

Application

Suitable for small to large water volumes. For installation in dual-pipe heating systems for consumers with integrated valve. The dynamic valve range Vario-DP makes hydraulic balancing in single and two family homes an easy and fast job.

Description

Low-noise, adjustable combination block with drain and shut-off feature. Adjustment range 20 to 340 l/h, fully adjustable with standard heating system bleed screw key. With cap to protect against incorrect operation.

The patented valve insert with automatic flow limiter automatically limits the water volume adjusted at the valves, independent of pressure variation in the heating system. This means that Vario-DP always supplies the right water volume to the radiator, regardless of the number of open or closed valves in the system. The valve insert can be replaced with the MGV mounting unit at operating pressure without the system having to be drained.

ⓘ

See page 265 for valve adjustment table (water volumes).
See page 262 for prices.
See page 273 for accessories.

Please note the additional information on mounting in the operating instructions.

❶ P1 = pressure inlet
❷ Membrane:
Expands at increasing differential pressure
❸ Fully adjustable with standard heating system bleed screw key

Patented valve insert with dynamic flow limiter
Since the control membrane is installed directly in the valve insert and since the valve spindle is used as the pressure sensor, there are no additional control components which might be subject to pollution. The valve operates with a standard valve gasket and does not require additional dirt filters.

Radiator lockshield valves type 456
- **Fully adjustable**
- **Shutting off individual radiators**
- **Reproducible adjustment**

A
Page 250

A
Page 258

A
Page 273

Application

To shut off individual radiators so that maintenance work or painting can be performed without having to drain the entire heating system. Suitable for small, medium and large water volumes. For installation in single-pipe and dual-pipe heating systems.

Description

Radiator lockshield valve type 456 with drain, shut-off and adjustment function.
With cap (version M) to protect against incorrect operation. Adjustable according to flow diagram (see operating instructions). The selected setting is reproducible due to the integrated stroke limiter/stop (not version M Eco) and thus independent of draining. The optional filling and draining unit FEV with hose connection G½ can be used for easy and fast draining. Draining capacity equal to flow coefficient 1.1. Versions M Eco without stroke limiter.

3	Approx. 20 °C
4	Approx. 23 °C
5	Approx. 26 °C

* Temperature difference to next dial marks is approx. 3 K.

Application

For setting and controlling the room temperature at the radiator. Version 323 suitable for valve body series Vario, VarioQ, Vario-DP, thermostat combination blocks Vario THK, VarioQ-Kombi, Twin and valve radiators with integrated valve insert with connection thread M 30 x 1.5 mm. Version 323 suitable for valve versions with Gampper clamp connection (valve bodies up to year of manufacture 1998). Version 323 KD suitable for Danfoss clamp connection (compatible series RA).

Description

Thermostat control head with liquid probe, consisting of hand wheel with scale and base in different colours (see ordering table). Optional version with remote probe or remote adjustment. The desired room temperature is set with the hand wheel. The temperature probe continuously checks the room temperature, compares the measured values to the set value and controls the flow rate by opening or closing the valve to obtain the set value. Adjustment range can be limited and blocked with a ring. With optimum temperature position (eco position) adjustable via memory clip (helpful for persons with visual impairment). Frost protection position with snowflake symbol.

Tamper-proof version without zero position. Lower adjustment only to snowflake symbol. The adjustment range must be selected when the valve is mounted for the first time. A protective cap consisting of two parts which cannot be removed prevents disassembly and changes to the selected settings. The protective cap is secured by means of a screw.

AFRISO

Thermostat control heads 316, 312

Conversion of thermostat control heads GAMPPER from year of manufacture 1975 up to date

Thermostat control head 316

Description The thermostat control head 316 can be converted with the adapter 316 KH (part no. 100 010.663) so that the thermostat control heads series 323 (M30 x 1.5 mm) can be mounted to an adapter. Conversion is also possible by replacing the valve inserts. If this is done, the system must be emptied.

Thermostat control head 312

Description The thermostat control head 312 can be replaced with the thermostat control head 323 N (part no. 360 002).

Observe the following when replacing thermostat control heads series 312:

① Valve insert with dual gear (double hex, AF 24)

① Valve insert with single gear (double hex, AF 24)
All standard series 323 thermostat control heads can be mounted to valve bodies with a dual gear.
In the case of valve bodies with a single gear, thermostat control heads version "S" must be mounted. The type designation for a thermostat control head with built-in probe is 323 (N) S and for a thermostat control head with remote probe 323 F(N)S, with indication of the capillary tube length.

Clean water

In the area of water technology, AFRISO offers equipment for drinking water supply and products for rainwater harvesting. The focus is the protection and cleanliness of the water, the supply pipes and the installations. AFRISO products are made to the most demanding hygienic requirements and the stringent demands of the German drinking water act as well as the recommendations of the leading associations and organisations.

Strainers, diaphragm safety valves MSW

Strainer

Diaphragm safety valve MSW

Application
Directly screwed into check valves or suction lines with standard pipe connections in domestic water installations.

For sealed drinking water heaters as per EN 806, DIN 1988 and DIN 4753-1 and for protection against overpressure.

Description
Strainer, consisting of stainless steel sieve, connection piece made of nylon.

The response pressure is factory-set.

AFRISO

Sacrificial anodes

Application Protection against frequently unnoticed corrosion damage in water heaters. Primarily for use in enamelled boilers or hot water tanks with other types of passive protective coatings. Defective areas in enamel or other passive protective coatings are subject to corrosion; this causes a flow of current which is transformed into a protective current by the anode material. The anode material thus falls victim to electro-chemical corrosion. Since the protective function of the anode rod is not unlimited, consumed anodes have to be replaced.

Anode I

Sacrificial anode

Chain anode

Description Sacrificial anode Ø 22, 26, 33 mm as per EN 12828, made of magnesium alloy, for isolated installation. With M8 male, threaded connection, isolating piece and earth cable. Consumption check with AT1 anode tester.

Sacrificial anode Ø 22, 26 or 33 mm as per EN 12828, made of magnesium alloy, suitable for all standard tanks. With screw fitting G¾, G1 or G1¼, without signal. See the ordering table for various versions with different lengths, threads and diameters.

Flexible sacrificial anode Ø 22 mm as per EN 12828, made of magnesium alloy. A flexible anode is used if there is insufficient space to install a rigid anode. Consisting of five individual elements along a stainless steel rope and a screw fitting G¾ or M8 threaded connection piece (see also Anode I) Length approx. 800–900 mm.

Anode tester AT1

Tester for consumption check of anode I or isolated standard sacrificial anodes.

- Handheld tester with 4-level LED indication
- Fast and easy indication of the condition of the anode
- Reliability of the water heater due to preventive maintenance – consumed anodes are replaced in good time

Hot water circulation system WZS 100

Thermostatic mixing valve, can be lead-sealed to help avoid scalding at the tap

From circulation

Hot water

From storage tank outlet

Cold water

Drain valve for venting or flushing the circulation line

Sophisticated fastening concept with all accessories for wall mounting

Flexible storage tank connection: WZS 100 can be mounted in any position; the positions of the safety valve and the storage tank outlet can be interchanged

To storage tank inlet

Backflow preventer

Assembly for easy connection to solar, hot water, hygienic or combination storage tanks (with or without circulation connection at the storage tank)

+ Pre-assembled, tightness-tested and heat-insulated assembly speeds up installation/commissioning and facilitates logistics

+ Intelligent circulation distribution by means of integrated bypass: No back circulation, no "mixing" of thermal layers in the stratified storage tank

+ Fully secured: diaphragm safety valve, backflow preventer and all shut-off valves integrated

+ Integrated pump for plug & play operation

+ Thermometer for easy on-site checks (range 0/120 °C)

AFRISO

Unwanted, inefficient incorrect installations of stratified storage tanks

As a result of the increasing use of renewable energy in domestic technology applications, the number of hygienic stratified storage tanks with a temporary operating temperature of more than 60 °C is also on the rise. In order to connect such tanks in a more efficient way, to keep the thermal layers and to limit the outlet temperature of the hot water, the installation of the service water line involves several fittings and connection parts.

Optimum design of the circulation can often be a major challenge in terms of hydraulics and logistics. For example, the service water connections to the water heater have been made according to the old, inefficient logic or important parts have been "forgotten".

In most cases, the circulation line of stratified storage tanks is connected to the cold water inlet of the hot water tank. This way, the hot circulation water of the return flows through the lower area of the stratified storage tank which is usually cooler. In the lower area, the returning circulation water is cooled - only to be heated up again in the upper thermal layers.

The consequence: The storage medium is evenly heated – which destroys the important thermal layering. The high energy density in the upper thermal layers is lost. In the most adverse case, the function of a solar system is prevented or extremely limited in the transition period.

Typical implementation issues:

Incorrectly installed circulation pump

Incorrectly installed circulation pump and "forgotten" backflow preventer

Incorrectly installed circulation pump and "forgotten" safety-related equipment
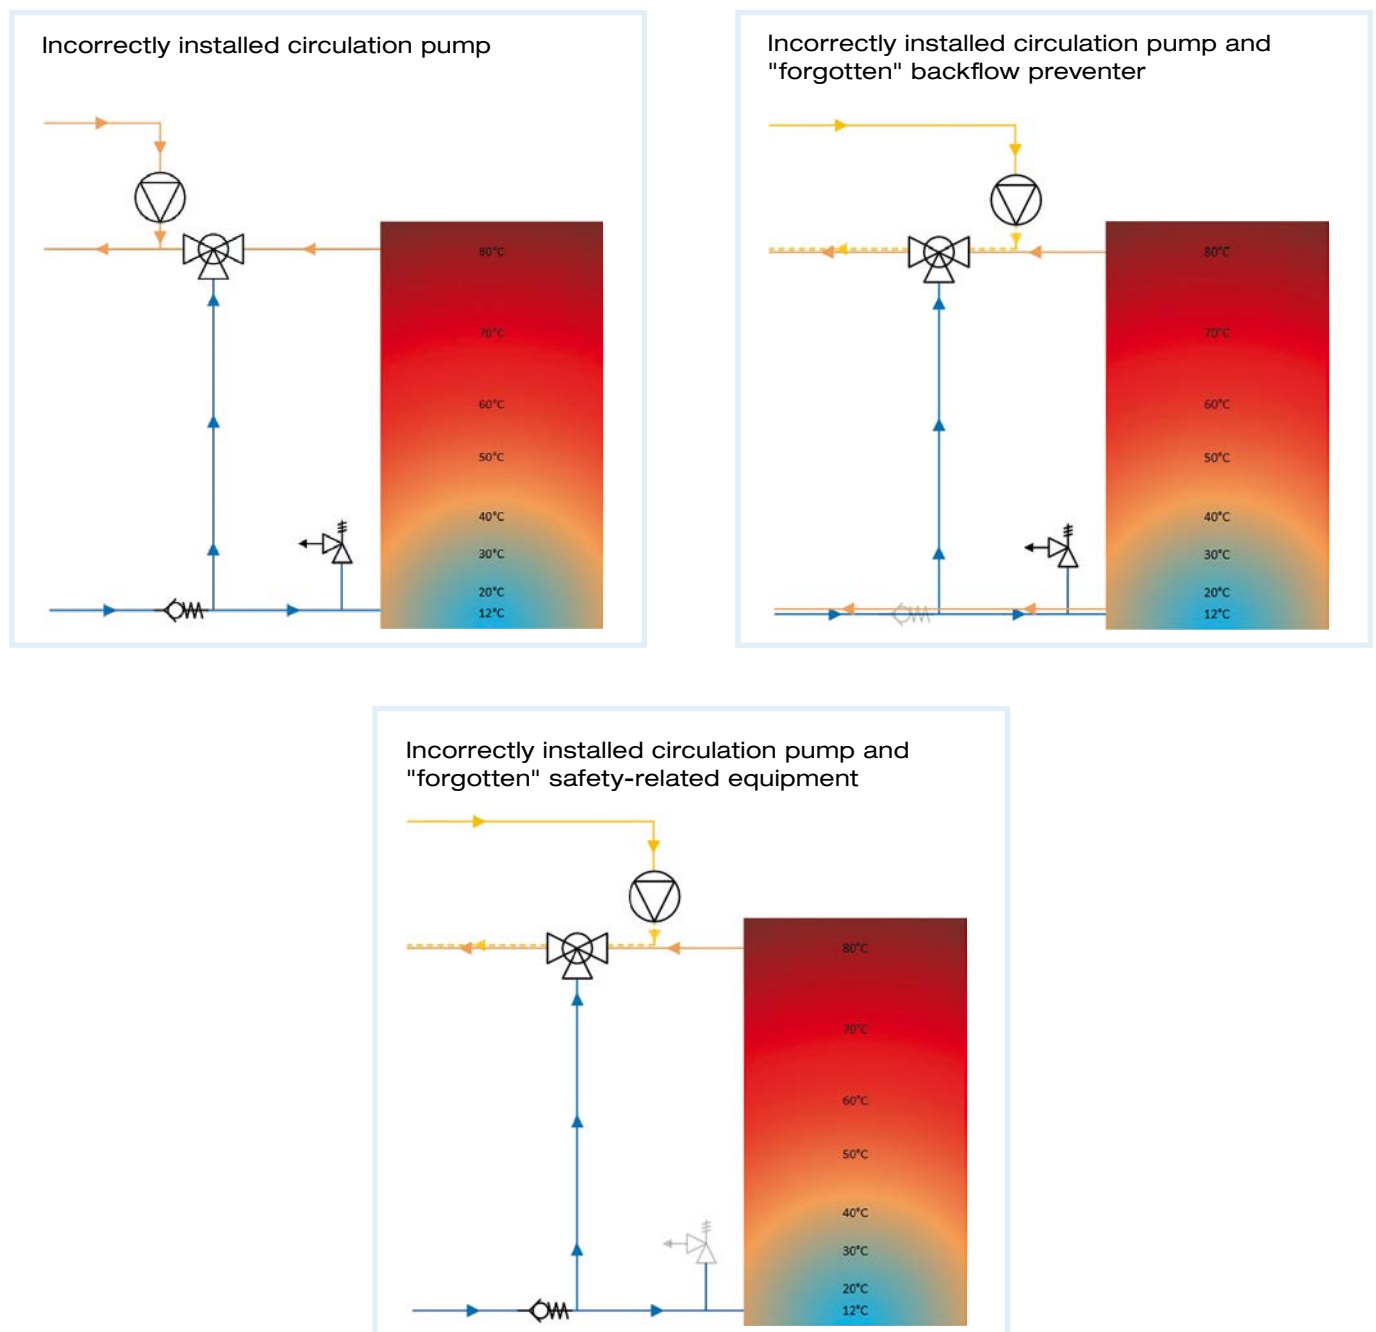

WZS 100 ensures reliable function and efficient operation

With the use of WZS 100, the return part of the circulation line has a direct connection to the cold water inlet of the thermostatic mixing valve. Depending on the water temperatures at the inlets of the mixing valve, they will open or close the hot water inlet and the cold water inlet to a higher or less high degree. A partial volume of the returning circulation water flows directly to the cold water connection of the mixing valve. Depending on the mounting situation (internal/external circulation), the other partial volume can be resupplied upstream of the tank. This allows for considerable energy savings.

WZS 100 thus allows for intelligent circulation distribution without back-circulation and without "mixing" of the temperatures in the stratified storage tank. With minimum installation effort, all possibilities of advanced stratified storage systems for efficient heating of water can used to their full potential.
Function example 1 (internal circulation via bypass)

Cold water flows via the safety fitting of WZS 100 to the cold water end via line A to the mixing valve and via line B to the water heater. In the example, the temperature adjustment knob of the thermostatic mixing valve ATM 363 is set to a hot water temperature of 60 °C. The unmixed hot water temperature at the storage outlet is 80 °C due to the high buffer temperature as a result or solar or regenerative energy. The mixing valve now opens or closes the path to the hot and cold water end depending on the temperature. Due to the fast control characteristics of ATM 363, the adjusted temperature is reached at the valve outlet (mix). Only the amount of heating energy really required to ensure the desired water temperature is actually used. If the hot water has reached the last consumer or the point or re-entry (service water to circulation), it is pumped back to the circulation unit via the newly developed flow distributor. Depending on the temperature, it distributes the water via line A to the mixing valve or via line B to the water tank. What's best: Even though there are two flow lines, the pump has to overcome only one check valve. The circulation pump has to overcome less counterforce which results in enormous energy savings and a prolonged service life of the pump.

1	Shut-off valve with thermometer	5	Check valve
2	Thermostatic mixing valve	6	Drain
3	Shut-off valve	7	Shut-off valve
4	Circulation pump	8	Diaphragm safety valve

Function example 2 (operation with circulation lance)

Same system requirements as in function example 1, but with use of circulation lance ZL 2. In this configuration, the water can only flow the direct path via the circulation lance (as opposed to the bypass version). This results in doubled benefits: Increased comfort as well as energy and heating cost savings.

This is achieved by supplying the returning hot water of the circulation directly to the upper thermal layer of the water heater so that it does not have to flow through the complete tank. At the same time, there is always enough hot water available to supply the fittings without inconvenient delays.

10

AFRISO
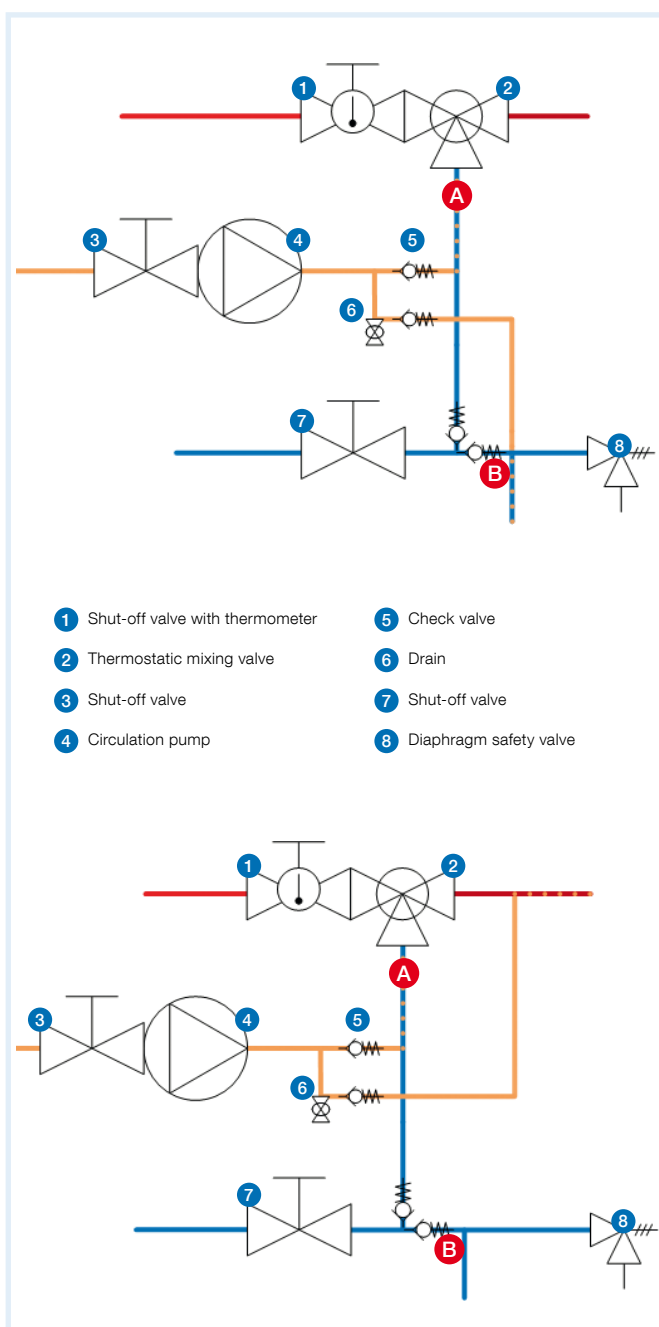

Hot water circulation system WZS 100
- ▪ **Dramatic energy savings in circulation mode compared to conventional circulation systems**
- ▪ **No mixing of the temperatures in the stratified storage tank**
- ▪ **Thermally controlled hot water temperature (with scald protection)**
- ▪ **Extremely low mounting effort and fast commissioning**

A

A

Application Circulation system for professional implementation of a service water circulation connection to an energy storage tank (hot water tank/stratified storage tank) which is operated at temperatures higher than 60 °C either permanently or temporarily. Also suitable for stratified hygienic storage and bivalent service water tanks. If used with older existing systems (for example, hot water tanks with wood, solar, gas, heat pump or oil-fired boiler), controlled circulation to meet actual demands results in high energy savings. The hot water circulation system is optimally suited for use with renewable energies in domestic technology applications, primarily in single and two family homes.

Description Compact, pre-assembled and tightness-tested hot water circulation system in form-fit heat insulation part, consisting of thermostatic mixing valve with integrated scald protection, circulation pump with all necessary functional components such as shut-off valves, variable safety group assembly, backflow preventer and connection parts as per DIN 1988.

The hydraulic separation of the flow paths ensures correct operation of the circulation pump since it has to overcome only one backflow preventer in any operating condition and thus avoids mixing of the cold water inlet in the circulation path.

Application

Circulation system for professional implementation of a service water circulation connection to an energy storage tank with existing safety-related equipment (hot water tank/stratified storage tank) which is operated at temperatures higher than 60 °C either permanently or temporarily. WZS 75 is ideal for retrofitting existing systems, primarily in single-family and two-family homes.

Description

Compact, pre-assembled and tightness-tested hot water circulation system, consisting of thermostatic mixing valve with integrated scald protection, thermometer, shut-off valve, drain valve for venting or flushing the circulation line as well as connection parts as per DIN 1988. The hydraulic assembly is suitable for storage systems which are already fitted with safety-related equipment such a diaphragm safety vales or backflow preventers or where such equipment is to be installed in the form of conventional individual components. Storage systems without safety-related equipment can be retrofitted with the safety group assembly WSG 150.

WZS 75 optimises temperature control in the hot water circulation and ensures that the temperature in the storage system is not unnecessarily reduced. A partial volume of the returning circulation water flows directly to the cold water inlet of the thermostatic mixing valve via an internal connection and is added there.

Application

Mixing valve for control of hot water in drinking water systems, boilers or drinking water heaters as per EN 806. Suitable for implementing or retrofitting a service water circulation connection to an energy storage tank (hot water tank/stratified storage tank) with existing safety-related equipment and pump.

Description

Compact, pre-assembled and tightness-tested assembly in form-fit insulation. ATM 363 WMG consists of an adjustable thermostat mixing valve, connection pieces as per DIN 1988 and a flow distribution unit with backflow preventer, lance connection and drain valve for venting or flushing the circulation line. Mixing valve with control knob with temperature scale (35/60 °C) for easy adjustment of the temperature of the water to be mixed. A cap protects the control knob against improper operation; it can be lead-sealed to help prevent unwanted adjustments. The selected adjustment is visible through the window in the cap. If the cold water line is interrupted, the mixing valve automatically closes the hot water supply to help protect against scalding.

Thermostatic mixing valves ATM

- ▪ **High accuracy, fast response**
- ▪ **With integrated scald protection**
- ▪ **Maintenance-free**
- ▪ **Ideal for showers and smaller underfloor heating circuits**
- ▪ **Cap with window and scale, can be lead-sealed (ideal for public facilities)**

Control knob with temperature scale

Application

Universal units for controlling hot water in sanitary applications, solar-heated, tankless water heaters or for smaller underfloor heating circuits which are directly connected to the flow (max. 60 °C). Also for panel heating systems such as wall or underfloor heating systems which require a constant mixed water temperature to avoid damage to floors and pipes. Suitable for drinking water or water with up to 50 % glycol.

Description

Thermostatic mixing valve as per EN 1111 with base made of brass and cap and control knob made of high-strength plastic. With temperature scale (20/43 °C or 35/60 °C) for easy adjustment of the temperature of the water to be mixed. A cap protects the control knob against improper operation; it can be lead-sealed to help prevent unwanted adjustments. The selected adjustment is visible through the window in the cap. If the cold water line is interrupted, the mixing valve automatically closes the hot water supply to help protect against scalding. The new chamber geometry also helps to avoid damage caused by overpressure during closing (backflow preventer at cold water end). The internal geometry as well as the materials used at the control surfaces help to ensure that control errors (for example, caused by lime deposits on the sealing surfaces) are practically excluded. ATM is maintenance-free.

Circulation lance ZL 2
- Integrated lance valve, design with no dead space
- Easy connection of stratified combination storage tanks without circulation connection
- Ensures optimum function of the stratified storage tank (layers are kept)
- Increased convenience due to shorter lead time

Application

Hydraulic connection assembly for tanks with drinking water flow heating to allow circulation mode for the domestic drinking water supply. Can be used in conjunction with the hot water circulation system WZS 100.

A stratified combination storage tank (corrugated pipe tank) which heats up drinking water according to the flow principle usually does not have a circulation connection. This frequently results in a connection problem. With the circulation lance, the circulation connection is made via the hot water outlet end. Thus, correct function of the stratified storage tank is ensured; the thermal layers are kept. The results in heating cost savings and electrical energy savings.

Description

Circulation lance for mounting in hygienic tank, consisting of part SPP with sleeve Ø 8 mm and PE-Xc pipe Ø 8 mm. A part of the circulation return volume is resupplied to the tank via the lateral circulation connection of ZL 2, heated up by means of the counter flow method and removed via the hot water connection of ZL 2. This is done via the circulation hose located in the heat exchanger pipe of the tank. Returning the circulating hot water in an optimum way ensures that the layers in the stratified storage tank remain intact.

Technical specifications

System connections
Rp1 female

Connection circulation return
G¾ male

Operating temperature range
Medium: Max. 110 °C

System pressure
Max. 6 bar

Material
Brass

Circulation hose
Ø 8 mm meshed polyethylene, 1.5 m long

Approval
Lance valve: SVGW certificate no. 0809-5419

Function principle external circulation
WZS 100 with circulation lance

In the case of external circulation, a partial volume is supplied to the stratified storage tank via the circulation connection and reheated in the upper area of the tank via the circulation lance. In the thermostatic mixing valve, the two partial flows are mixed together again to the adjusted reference temperature. Since only a part of the circulating water is heated directly in the top thermal layer of the tank, a mixing of the thermal layers is excluded.

Circulation controller EC 1

- **Demand-controlled pump control for hot water circulation**
- **Legionellae protection function**
- **High energy savings due to intelligent pump control**
- **Intuitive use, reliable operation**

A

Page 300
Application

For demand-controlled optimum control of the hot water circulation in conjunction with the hot water circulation system WZS 100. Unnecessary periods of operation (time control or thermal control) and energy costs can be reduced.

Description

Circulation controller in wall mounting housing with controller adjustment via menus. A flow switch connected to EC 1 (for example, circulation switch ZS 2) monitors water withdrawal at the hot water end. After short opening of a tap in the hot water line, the circulation pump is switched on and stopped after an additional running time adjusted by the user has elapsed. This turns any standard fitting in the hot water system into a kind of "remote control".

This is energy savings in two ways: due to the demand-controlled pump, the storage tank is not cooled down unnecessarily by circulating the hot water, and the shorter running time of the circulation pump saves energy.

Water filter WAF 04 R with pressure reducer, backwashable

DVGW
CERT

- **With integrated pressure reducer**
- **Inlet pressure compensation for constant outlet pressure**
- **Rotatable cover to indicate the next backwashing date**
- **Transparent filter cup shows degree of pollution of the filter**
- **Innovative backwashing system – fast and thorough cleaning of the filter, low water consumption**

Application

For the protection of drinking water installations against corrosion as per DIN 1988. The pressure reducer reduces the inlet pressure to an even, system-specific pressure in order to protect the installation and to ensure economical water consumption. Water filters help to keep pollutants such as rust particles and sand grains from reaching the domestic water installation and thus protect valves, machines, flow heaters, etc. from malfunctions caused by pollution. Ideal for modernisation of domestic water installations where an existing filter needs to be replaced.

Description

DVGW-tested water filter, compact plastic version with backwashable fine filter, integrated pressure reducer and pressure gauge for the outlet pressure. The fine filter insert consists of an upper part and a combined lower part. In the operating state "Filtration", the small upper filter is closed so that the water can only flow through the main filter from the outside to the inside. When the ball valve for "Backwashing" is opened, the filter is pressed down until the water supply to the outside of the main filter is interrupted. At the same time, the water flow through the upper filter is opened. The water required for cleaning the filter flows through the upper sieve, the rotating impeller and the main filter from the inside to the outside. This ensures effective cleaning of the filter across the entire surface of the sieve at full inlet pressure. When the ball valve is closed again, the filter automatically resumes normal operation.
The pressure reducer operates on the basis of a force comparison system, i.e. the force of a spring counteracts the force of a diaphragm. The inlet pressure neither acts in the opening nor in the closing direction. Therefore, pressure changes at the inlet pressure side do not affect the outlet pressure.

10

Technical specifications

Medium
Drinking water

Inlet pressure
Max. 16 bar

Outlet pressure
1.5–6 bar

Operating temperature range
Medium: Max. 30 °C

Mounting position
Vertical or horizontal with filter cup down

Connection
G¾, G1, G1¼ as required

Material
Housing:　　High-grade plastic
Fine filter:　Stainless steel, mesh size 110 μm
Filter cup:　Shock-resistant, transparent plastic

1 Storage compartment for spare seals/silicone grease

2 Filtered high pressure outlet (as per DIN 1988), e.g. for garden line

3 Pressure-reduced supply outlets with drain hoses (1 outlet with backflow preventer)

4 Safety valve (6 bar) outlet hose

5 Backflow preventer, DVGW approval

6 Connection G¼ for sampling valve

7 Filter combination with fine filter and pressure reducer, DVGW approval

8 Drain unit consisting of funnel (DN 75) and reducing adapter (DN 75/DN 50)

Domestic water system centre HWSC

- **Extremely compact system centre 395 x 760 mm (W x H)**
- **Lightning-fast, easy installation**
- **Innovative backwashing system – fast and thorough cleaning of the filter element, low water consumption**
- **Modular design: Can be extended by additional pressure-reduced outlets, automatic backwashing unit, refill combinations, etc.**

Automatic backwashing unit RA 01 (accessory) for setting the time intervals.

reddot design award
winner 2013

Application

For drinking water installations as per EN 806, DIN 1988 and DIN 4753-1. The system centre combines all functions of conventional water distribution installations in a small-footprint unit: the pressure reducer reduces the inlet pressure to an even, system-specific pressure in order to protect the installation and to ensure economical water consumption. The water filter keeps pollutants such as rust particles or sand grains from reaching the domestic water installation, thus protecting valves, machines, boilers, etc. from malfunctions caused by dirt. With its straightforward design and unobtrusive colour, the domestic water system centre fits in perfectly with modern equipment rooms, basements and utility rooms.

Description

Compact, tightness-tested domestic water system centre as a complete solution for the distribution of drinking water in buildings. The base version of HWSC consists of a backflow preventer, filter combination with fine filter and pressure reducer, drain unit with connection possibility to the wastewater system, three supply outlets, safety valve and all function components. The individual components are DVGW-certified or comply with the DVGW regulations. The assembly is contained in a form-fit insulation for easy access and operation. The integrated transparent front door allows for checking the system pressure and the safety valves and provides easy access to start backwashing; it is not necessary to remove the upper part of the insulation. The memory pointer on the door lets you set the date for the next backwashing procedure.

HWSC excels with a dramatic reduction of the installation time: a drilling template is shipped with the unit for precise positioning of the three holes. Hanger bolts allow for precise adjustment of the domestic water system centre to the wall and enable easy horizontal and vertical alignment. HWSC features a variable height adjustment from 65 to 115 mm to allow for precise adaptation to the individual distance of the water meter from the wall. The default connection setting is intended for left-side connection, but HWSC can be converted to right-side connection in a matter of minutes.

The integrated filter combination features an innovative backwashing system with rotating impeller which ensures fast and thorough cleaning of the fine filter and low water consumption. The entire sieve surface of the filter insert is cleaned at high pressure. The pressure reducer reduces the inlet pressure to an even, system-specific pressure; part of the water flows directly and without pressure reduction to the high-pressure outlet for the garden line. If this is not required, it can be converted into an additional pressure-reduced supply outlet. The insulation can accommodate up to four supply outlets; any additional outlets must be mounted outside the insulation. Due to the modular design and the defined connections, it is easy to fit extensions with an automatic backwashing unit, a refill combination for filling heating systems and the connection of a sampling valve or a water softening system.

Door for fast checking the system pressure as well as the safety valve or for starting backwashing.

Oil tank conversion kits II + III for rainwater usage in gardens
Application

Oil tank conversion made easy. We supply a number of special rainwater components for quick and easy installation of rainwater harvesting systems. The tank cover is the most important component of the kit as it enables simple and clean piping through two openings. The pipe is routed from the downpipe to the tank top and connected to the filter system. Depending on the site conditions and the available space in the manhole, it is recommended to install a downpipe filter or a cartridge filter. Pipe couplers are used to connect the filter elements. The pipe to the sewage system must form a siphon using the drain pipe elbows. A self-priming jet pump with integrated pressure and dry run protection is ideally suited for water withdrawal.

Scope of delivery

Oil tank conversion kit II for rainwater usage in gardens (up to 75 m² roof area):

- Plastic manhole cover Ø 500 mm

- Rainus downpipe filter with 2 quick-action connection pieces (DN 100)

- Calmed inlet

Oil tank conversion kit III for rainwater usage in gardens (up to 210 m² roof area):

- Plastic manhole cover Ø 500 mm

- Cartridge filter PF with 2 quick-action connection pieces (DN 100)
- Calmed inlet

i

See page 308 for inner linings for rainwater.

Rainwater inner lining AR-SM with magnets

- **Operation without vacuum type leak detector, no pressure, no current**
- **Easy and fast installation by means of powerful neodymium magnets**
- **Perfectly fitting, robust PVC lining**

Application

For conversion of cylindrical steel DIN tanks such as decommissioned fuel oil tanks, diesel tanks or storage tanks into reliable, high-grade rainwater storage tanks. No pressure or flow required. The rainwater inner lining AR-SM with magnets is suitable for storing rainwater in cylindrical steel tanks (3,000 to 50,000 litres).
Please note: In the case of coated steel tanks, verify that the attractive force of the magnets is sufficient.

Description

The rainwater inner lining AR-SM allows owners to convert a decommissioned steel tank into a rainwater storage tank with very little effort.

The rainwater inner lining AR-SM is a PVC lining with flat, round, extremely powerful neodymium magnets welded into lateral and top areas. The lining is reliably held at the inner wall by the magnets - no pressure or power supply are required inside the tank. A tank can be conveniently converted into a rainwater storage tank: First, the tank is measured and then a precisely fitting lining is manufactured. The tank is prepared on the basis of a defined procedure (thorough cleaning of the tank, corrosion checks, etc.); depending on the condition of the tank, a fleece layer is placed on the tank floor for impact protection.

Then the lining is fitted in the steel tank and inflated by means of a blower; if necessary, the final fit is achieved by means of a vacuum pump. When the PVC lining is inflated, the magnets click into place at the inner wall exactly where planned. The fit of the PVC lining is checked and then it is fastened in the manhole by means of a fastening ring. The tank is ready for storing rainwater immediately after the lining and the piping connections have been installed.

Scope of delivery

Rainwater inner lining AR-SM, made of plastic film Sikaplan® WP5140-08 black, film thickness 0.8 mm, for closed tanks, with all neodymium magnets welded into the film in the lateral and top areas, with film flange for the standard fastening ring.

10

i

Not only cylindrical DIN steel tanks, but certain steel tanks with different geometrical shapes can be converted into rainwater storage tanks.
Please enquire separately.

i

Depending on the local conditions and on the tank, a fleece lining may be required in the bottom area of the tank as an impact protection. Different dome distances and special dimensions are manufactured at the same conditions.

Backup controller kit RENA for rainwater storage tanks

- Microprocessor-controlled supply of drinking water to rainwater tanks with connected water station
- Dry run protection and safety shutdown
- 2 program times for normal or increased water consumption
- Easy handling – fast installation

1. Level probe
2. Solenoid valve

Application

For monitoring rainwater tanks for sufficient water level. The backup controller RENA, consisting of control unit RENA, probe and solenoid valve, is designed for fully automatic supply of drinking water to rainwater tanks with connected water station. Continuous operation without frequent on and off cycles, two selectable program times for normal or increased water consumption, with leak monitoring, dry run protection and protection against deposits.

Description

The complete backup controller kit consists of a control unit, indicators and controls and a Schuko CEE socket for connection of the water station, a probe for the water tank and a solenoid valve for connection to the water tap. If, as a result of insufficient precipitation or considerable water withdrawal, the level in the tank falls below a specific value, the solenoid valve is opened and fresh water from the drinking water mains system is supplied. 2 program times are selectable, depending on the water consumption (e.g. garden watering, car wash). In order to avoid the formation of deposits at the solenoid valve, the valve is opened and closed for one second three times in a row once per week. RENA features a safety shut-off system that responds to leaks in the tank or the pipes.

Pressure gauges – Mechanical pressure measuring instruments with elastic measuring elements

Bourdon tube pressure gauge

The measuring element of a Bourdon tube pressure gauge is a C shaped or helical metal tube closed at one end. For pressure ranges up to a maximum of 60 bar, the tube has an oval cross section and the shape of a C. For higher pressure ranges, the tube is bent into the shape of a helix. The oval cross section is obtained during bending. When pressure is applied, both types of bent tubes try to regain their original shapes, the straight tube. In this process, the radius increases and this displacement is converted into a circular movement by the movement. Bourdon tube pressure gauges are suitable for a wide variety of applications in measuring liquids and gases; they are the most commonly used pressure gauges. They are used for pressure measurements from 600 mbar up to several 1000 bar.

Capsule pressure gauge

Capsule pressure gauges are used in gas technology applications for low pressure ranges. Two concentrically shaped diaphragms are connected at the outer edges by means of welding or soldering. One diaphragm has an opening in the centre through which the gas to be measured can flow in. The pressure in the capsule causes it to arch to the outside. A deflection lever at the opposite side of the inlet opening transmits the linear displacement to a movement and converts it into a rotary movement. As early as in the 1920s, AFRISO patented this system as the "fine pressure gauge".
Capsule pressure gauges are exclusively used for dry and clean gases at measuring ranges from 6 mbar to 1,000 mbar.

Diaphragm pressure gauge

Diaphragm pressure gauges use a concentrically shaped diaphragm which is directly connected to the process connection. The pressure is applied to the process side of the diaphragm. A rod at the opposite side which is fitted with a movement converts the displacement of the diaphragm into a rotary movement. Diaphragm pressure gauges are used for gaseous and liquid media within the range from 10 mbar to 25 bar; the media can even be viscous or crystallising if the process connection opening (open flange) is sufficiently large.
With a flush welded diaphragm, they are ideal for measurements in hygienic processes.

Spring-diaphragm pressure gauges

Spring-diaphragm pressure gauges are ideal for measuring low differential pressures at high static pressures. The pressures act on two pressure chambers separated by an elastic diaphragm. If there are different pressures in the chambers, the diaphragm is axially displaced against a compression spring. This displacement is transmitted to a movement by a rod and converted into a rotary movement. The differential pressure is directly indicated by a pointer. The diaphragm is held by a metallic support which results in an overpressure safety of up to 25 bar at both sides. Diaphragm pressure gauges are used for liquids that are not highly viscous and for differential pressure from 250 mbar to 25 bar.
Magnetic piston and magnetic diaphragm pressure gauges

Magnetic piston type pressure gauges and magnetic diaphragm pressure gauges are primarily used for measuring differential pressure at filters which are subject to high static pressures. The pressures act on two pressure chambers separated by a diaphragm and/or a piston. If there are different pressures in the chambers, a rod with a permanent magnet is axially displaced against a compression spring. The permanent magnet transmits this displacement to the pointer by means of a ring magnet mounted to the pointer hub. The pointer indicates the pressure difference. Magnetic piston pressure gauges and magnetic diaphragm pressure gauges are used for the measurement of differential pressure of gases from 2.5 mbar to 10 bar; a static pressure of up to 350 bar is permissible.

11

AFRISO

Bourdon tube pressure gauges for boiler and heating system applications

- **Design as per EN 837-1**
- **Corrosion-resistant, highly impact-resistant plastic housing**
- **Many customised versions available**

Version: Plastic connection

Application

For gaseous and liquid media which are not highly viscous, do not crystallise and do not attack copper alloys and plastic.
For measuring gas or vapour, these gauges must be used in accordance with the table "Selection Criteria as per EN 837-2" (see appendix)!

Technical specifications

Pressure gauges with capillary tube

For burners, boiler, hot water tanks and air conditioning/refrigeration systems, AFRISO offers different pressure and temperature measuring instruments with various housing versions and connection types. The portfolio covers cost-effective pressure gauges and thermometers with plastic or copper capillaries as well as combination instruments such as combined thermometer/pressure gauges. We also provide OEM versions for your specific applications. Please enquire.

Application examples

i

See page 354 for thermometers with capillary tube.

AFRISO

Bourdon tube pressure gauges for industrial applications

EN 837-1

- **For machine and plant engineering**
- **Robust, stainless steel housing with bayonet bezel**
- **Optionally available up to nominal size 250 mm**
- **Can be equipped with electrical contact**
- **DNV-GL- and GOSSTANDART-certified**
Application

For gaseous and liquid media which are not highly viscous, do not crystallise and do not attack copper alloys. For high accuracy and rough application conditions.
! For measuring gas or vapour, observe the table "Selection Criteria as per EN 837-2" (see appendix)!

Standard Bourdon tube pressure gauges for differential pressure

- **Indication of plus pressure, minus pressure and differential pressure**
- **Excellent price/performance ratio**
- **Two independent Bourdon tube systems**
- **Housing and wetted parts also available in stainless steel (option)**

A

Page 339
Reading example
Δp (differential pressure)
① p1 (+ connection)
② p2 (- connection)

Application

For differential pressure measurement of gaseous and liquid media which are not highly viscous, do not crystallize and do not attack copper alloys. Specially suitable for heating systems (supply and return pipes). ! For measuring gas or vapour, observe the table "Selection Criteria as per EN 837-2" (see appendix)!

Technical specifications

Type
D 2

Nominal size
100

Function
The pressures are measured in two independent Bourdon tube systems ("plus" pressure = high pressure, "minus" pressure = low pressure). The pressure is indicated by means of a dial and a pointer. The differential pressure scale covers 50 % of the range of the "plus" pressure and 50 % of the range of the "minus" pressure. The black pointer ("plus" connection) and the red pointer ("minus" connection) at the differential pressure gauge scale allow you to read the pressures in both systems on the fixed scale.

Accuracy class (EN 837-1/6)
1.6

Ranges (EN 837-1/5)
0/0.6 to 0/60 bar

Application area
The maximum pressure in the system must not exceed the full scale value. For good readability, the differential pressure to be measured should not be less than approx. 20 % of the full scale value.

Operating temperature range
Medium: T_{max} =   +60 °C
Ambient: T_{min} =   -20 °C
                   T_{max} =   +60 °C

Temperature performance
Indication error when the temperature of the measuring system deviates from the normal temperature of 20 °C:
rising temperature approx. ±0.4 %/10 K
falling temperature approx. ±0.4 %/10 K
of full scale value

Degree of protection
IP 32 (EN 60529)

Connection
Brass, bottom; parallel in line
2 x G½B – spanner size SW 22 (EN 837-1/7.3)
Optional: Wetted parts stainless steel

Measuring element
Bourdon tube, "C" type tube, copper alloy

Movement
Brass

Dial
Aluminium, white
Dial marking black (bar/mWC)

Pointer/dial
Aluminium

Housing
Sheet steel, black

Push on bezel
Sheet steel, black

Window
Instrument glass

AFRISO

Shut-off cocks and valves for pressure gauges

Shut-off cocks for pressure gauges

Application

Shut-off element between pipe and pressure gauge. Shut-off cocks with test port allow you to connect both pressure gauges and testers to the pipe. Suitable for liquids, gases and vapour.

Technical specifications

Version
DIN 16261 to 16263
(or based on DIN)

Operating temperature range
Medium: -10/+50 °C

Connection and nominal pressure
See price list

Housing and tap
Brass bare metal surface or stainless steel bare metal surface.
The tap contains two holes which are arranged in the shape of a T. The function depends on the tap position:
1. Vent pressure gauge
2. Apply pressure to pressure gauge
3. Blow out measuring line
4. Apply pressure to tester

① Vent   ③ Blow out
② Operation   ④ Test (option)
Pressure gauges shut-off valves

Shut-off or reducing element between pipe and pressure gauge. Stop valves with test port allow you to connect both pressure gauges and testers to the measuring line. Suitable for liquids, gases and vapour.

Version

DIN 16270	without test port
DIN 16271	with test port, male M20 x 1.5

AFRISO

Overpressure safety device, Pressure gauge push-button stop cock

Overpressure safety device

Application

Adjustable overpressure safety device used to protect the system against peak pressures exceeding the range of the pressure gauge. At measuring points which are subject to great pressure variations, you can install different pressure gauges with different ranges in order to precisely measure even the lower pressures. The overpressure safety devices are adjusted according to the maximum permissible pressure ratings of the various pressure gauges installed.

Technical specifications

Function

When the set pressure is reached, a piston valve shuts off the port to the pressure gauge. After the pressure has dropped to a value of approx. 25 % below the closing pressure, the valve opens again.

Operating temperature range
Max. +80 °C

Overpressure safety
Brass: 600 bar
Stainless steel: 1,000 bar
Max. vacuum range up to -1 bar, no adjustment function

Connection
G½ female/female connection x male connection

Materials overpressure safety device

Parts	Brass	Stainless steel
Housing	Brass	316 Ti

Pressure gauge push-button stop cock

Application

Shut-off element between measuring line and pressure gauge. Normally, the push-button stop cock is closed. In this state, there is no pressure applied to the pressure gauge. Push the button to apply pressure to the pressure gauge and to display the operating pressure. Suitable for gases as per DVGW G260 and SVGW.

Technical specifications

Test
DVGW- and SVGW-tested, with EC Type Examination Certificate, product ID number CE-0085AQ0985

CATALOGUE INDUSTRIAL TECHNOLOGY

Pressure measuring instrument for industrial applications and process engineering

Standard pressure gauges

+ For pneumatic and mechanical engineering applications

+ Highly impact-resistant plastic housing or robust steel or stainless steel housing

+ Window with adjustable reference pointer

+ Options: Special scales, connections for different processes, mounting flanges, etc.

Nominal sizes
40 – 50 – 63 – 80 – 100

Accuracy class
1.6

From page 21

Pressure gauges for industrial applications

+ For machine and plant engineering

+ Robust steel or stainless steel housing

+ Optionally with electrical contact

Nominal sizes
100

Accuracy class
1.0

From page 32

i

This and many other products can be found in the catalogue INDUSTRIAL TECHNOLOGY.

Glycerine filled pressure gauges

+ Can be used in case of heavy vibrations and high, dynamic pressure loads

+ Less wear and corrosion protection of the measuring system

+ No steaming up of the inside of the window in case of outdoor applications

Nominal sizes
40 – 50 – 63 – 80 – 100 – 160

Accuracy class
1.0 or 1.6

From page 38

Pressure gauges for chemical applications

+ For chemical and process engineering applications

+ Measuring system fully welded to housing

+ For temperatures of the medium of up to 150 °C

Nominal sizes
50 – 63 – 100 – 160

Accuracy class
1.0 or 1.6

From page 55

AFRISO

Safety pressure gauges

+ Safety pressure gauge S3 as per EN 837-1/9.7.2

+ Measuring system fully welded to housing

Nominal sizes
63 – 100 – 160

Accuracy class
1.0 or 1.6

From page 69

Pressure gauges for refrigeration engineering

+ Can be used in case of heavy vibrations and high, dynamic pressure loads

+ Various refrigerants measurable with multiple scales

Nominal sizes
60 – 80 – 100

Accuracy class
1.0 or 1.6

From page 89

Precision pressure gauges

+ High measuring accuracy

+ Suitable as measuring equipment as per QA requirements

Nominal sizes
160 – 250

Accuracy class
0.6

From page 81

Pressure gauges with electrical contacts

+ Up to 3 contacts possible

+ Either magnetic spring contact, electronic contact or inductive contact

Nominal sizes
63 – 100 – 160

Accuracy class
1.0 or 1.6

From page 102

Magnetic piston pressure gauges

+ For differential pressure measurement at high pressure, e.g. monitoring of filters, pumps, pipes or cooling circuits

+ High overload protection: Max. static pressure PN 100 to 400

Nominal sizes
63 – 80 – 100

From page 134

AFRISO

345

Pressure gauges for differential pressure

+ Measurement of extremely small differential pressures

+ Direct indication of the differential pressure

+ High overload protection

Nominal sizes
63 – 100 – 160

Accuracy class
1.6 or 2.5

From page 145

Pressure transducer DMU 02 Vario

+ Connection technology with numerous versions for applications in many industries

+ Extremely resistant to shock, pulsation and vibration

+ Best dynamic pressure resistance at high load changes

Measuring ranges
-1/0 to -1/+24 bar
0/1 to 0/1,000 bar

From page 206

Pressure transducer DMU 01 K

+ Compact version for OEMs

+ Proven ceramic technology

+ No mechanical ageing of the measuring cell

Measuring ranges
0/1.6 to 0/250 bar

From page 199

Digital pressure gauge DIM 20

+ High flexibility due to selectable units

+ Min./max. memory

+ Display can be rotated by 330°

Measuring ranges
-1/0 bar, 0/2.5 bar
to 0/700 bar

From page 248

Thermometers
with capillary tube

For burners, boiler, hot water tanks and air conditioning/refrigeration systems, AFRISO offers different temperature and pressure measuring instruments with various housing versions and connection types. The portfolio covers pressure gauges and thermometers with plastic or copper capillaries as well as combination instruments such as combined thermometer/pressure gauges. We also provide OEM versions for your specific applications. Please enquire.

AFRISO

Thermometers THK
with capillary tube

- **Ideal for boilers and water heaters**
- **Corrosion-resistant, highly impact-resistant plastic housing**
- **Many customised versions available**

A

Application — Heating and plumbing, e.g. boilers, water heaters, hot water storage tanks.

Technical specifications

Nominal size
37 – 40 – 52 – 45 x 45

Range
0/120 °C

Accuracy/test point
50 °C = ±3 °C

Measuring principle
Liquid filling

Operating temperature range
Medium: Full scale value
Ambient: T_{max} = +70 °C

Operating pressure
No pressure

Degree of protection
IP 32 (EN 60529)

Standard version

Connection
Back, with Cu capillary tube
Probe: Ø 6 x 30 mm, Cu
(see data sheet)

Dial
Plastic (ABS), white or black
Dial marking black

Pointer
Plastic, black or white

Housing
Plastic (ABS), white, black or grey
Highly impact-resistant and corrosion-resistant

Window
Clip-in plastic, transparent

AFRISO

Combined thermometer/pressure gauges TM / thermo-hydrometers TH

- **Pressure and temperature measurement with at a single measuring point**
- **With self-sealing connection thread for fast mounting**
- **Bottom connection or back connection**
- **With mounting valve for easy replacement without downtime**

Bottom connection version

Application
For liquid media which are not highly viscous, do not crystallise and do not attack copper alloys.
For combined measurement of pressure and temperature, especially in heating systems and heating boilers.

Description
The combined thermometer/pressure gauge / thermo-hydrometer consists of a Bourdon tube measuring system for pressure measurement and a bimetal measuring system for simultaneous temperature measurement. Both values are measured and displayed by a single gauge. A self-closing mounting valve enables easy replacement of the gauge without the necessity to drain the system.
An optional M18 x 1 to G¼ adapter is available if the combined thermometer/pressure gauge has to be mounted into an existing thermowell with M18 x 1 female thread.

Technical specifications

Type
D 1/D 2

Nominal size
63 – 80

Accuracy class
Pressure gauge/hydrometer: 2.5 (EN 837-1/6)

Application area
Pressure gauge/hydrometer:
Static load: ¾ x full scale value
Dynamic load: ⅔ x full scale value
Short-term: full scale value
Thermometer: 20/120 °C

Ranges
Pressure gauge/hydrometer:
0/4 bar to 0/10 and 0/6 mWC to 0/60 mWC
Thermometer: 20/120 °C

Operating temperature range
Medium: T_{max} = +120 °C
Ambient: T_{min} = -20 °C
T_{max} = +60 °C

Temperature performance
Pressure gauge/hydrometer:
Indication error when the temperature of the measuring system deviates from the normal temperature of 20 °C:
rising temperature approx. ±0.4 %/10 K
falling temperature approx. ±0.4 %/10 K
of full scale value

Degree of protection
IP 32 (EN 60529)

Standard version

Connection
Brass, bottom or centre back G¼B
with mounting valve G¼ to R½

Measuring element
Pressure: Bourdon tube, copper alloy
Temperature: bimetal element

## Bimetal thermometer for industrial applications

Technical specifications

Mechanical engineering, plant engineering, pipelines, boilers, heating technology

Type
D2

Nominal size
63 – 80 – 100 – 160

Measuring element
Bimetal helix

Accuracy class
1 (EN 13190)

Ranges °C
-20/+60, 0/60, 0/120, 0/160

Application area (EN 13190)
Continuous load: measuring range
Short-term: range

Operating pressure at thermowell
10 bar maximum (static)

Degree of protection
IP 41 (EN 60529)

Standard version

Connection
Stem brass, Ø 9 mm
Thermowell G½B, brass, removable

Mounting position
NG 63 – 80 – 100 – 160 centre back
NG 63 – 80 – 100 – 160 bottom

Dial
Aluminium, white,
Dial marking black

Pointer
Aluminium, black

Housing
Sheet steel galvanised

Push on bezel
Sheet steel nickel-plated

Window
Instrument glass

Options

AFRISO

Bimetal stainless steel thermometer

- **Suitable for use in plant engineering**
- **Accuracy class 1 as per EN 13190**
- **For temperatures of the medium of up to 160 °C**

With adapter ring for thermowell Ø 18 mm

Application

For corrosive media. Versatile application.

Technical specifications

Type: D3

Nominal size: 63 – 80 – 100

Measuring element: Bimetal helix

Accuracy class: 1 (EN 13190)

Ranges °C
-20/+60, 0/60, 0/120, 0/160

Application area (EN 13190)
Continuous load: measuring range
Short-term: range

Operating pressure at thermowell
6 bar maximum

Degree of protection: IP 43 (EN 60529)

Standard version

Connection
Stem stainless steel 316 L, Ø 8 mm, plain

Adapter ring
Plastic, for thermowells with
connection collar Ø 14, 18 mm
(only for axial mounting position up to max. 120 °C)

Mounting position
NG 63 – 80 – 100 centre back
NG 63 – 100 bottom

Dial
Aluminium, white – Dial marking black

Pointer: Aluminium, black

Housing and push on bezel: Stainless steel 304

Window: Instrument glass

Options

- Thermowell G½B, stainless steel 316 Ti/316 L
- Other connection designs
- Other ranges
- Other stem lengths

AFRISO

Connection types for bimetal thermometers

(industrial, stainless steel and chemical versions)

Plain

① Housing
② Stem
③ Recess for locking screw

Loose male connection

① Housing
② Stem
③ Loose connection, with thread
   for screw connection

Separate screw-in thermowell (with locking screw)

① Housing
② Thread for screw connection
③ Thermowell pushed on,
   fixed with locking screw

Loose union nut

① Housing
② Stem
③ Loose union nut, with female thread

Separate weld-in thermowell (with locking screw)

① Housing
② Locking screw for fixing
③ Thermowell pushed on,
   for welding

Compression fitting, adjustable on stem

① Housing
② Cutting ring
③ Stem
④ Compression fitting adjustable

Fixed male connection

① Housing
② Stem
③ Fixed male connection,
   with thread for screw connection

DIN thermowell

① Housing
② Stem
③ Thermowell as per DIN 43772
   with thread for screw connection

12

i See catalogue INDUSTRIAL TECHNOLOGY, chapter 4, for extra charges and part numbers for connection types and other ranges.

Industrial thermometers VMTh
- **Extremely robust due to full metal housing**
- **Vibration-resistant glass thermometers**
- **Stainless steel version possible**
- **Excellent readability due to blue thermometer filling**

Application Heating, industry, mechanical engineering

Technical specifications

Nominal size
110 x 30 – 150 x 36 – 200 x 36

Upper part
Aluminium, V-shaped, polished, anodised brass-coloured. Numbers of measuring range printed in black at the right part of the scale below the anodised layer. Adjustable by means of brass nut (spanner size SW 22) so that readings from any angle are possible.

Glass insert (capillary)
Prismatic capillary, completely made of glass, Ø 6 mm. Graduation marks of the capillary burnt in, black, completely resistant.
Main graduation marks corresponding to the numbers printed on the housing are especially bold and easy to read.

Thermometer filling
Standard version:
Blue liquid indicating from -60 to +200 °C.

Stem
Brass, Ø 10 mm, with fixed thread G½B.
Stainless steel version on request.

Accuracy
DIN 16195

Ranges °C
-30/+50, 0/60, 0/100, 0/120, 0/160

Mounting position
Straight
Angled   90°
Angled   135°

Stem lengths (mm)
40, 63, 100, 160

Temperature control thermostats TRT with capillary tube

- **Mechanical temperature controllers**
- **For controlling and monitoring thermal processes**
- **Ideal for heat and process engineering**
- **Simple, robust design**

A

Application

Mechanical temperature controller and limiter without external power supply. The device is suitable for application areas in the field of heat and process engineering. With the liquid-filled measuring systems and the short response times, the devices lend themselves for controlling thermal processes in appliance engineering, ovens, heating and air conditioning and other industrial or domestic applications.

Description

The temperature measured at the probe causes a change in the volume of the measuring liquid in the probe-capillary system. Electrical switching is triggered by the force acting. A thermowell allows for pressure-tight installation of the probe in various types of pressurised tanks.

Technical specifications

Type

- **Ideal for heating and process industries**
- **For protection against exceeding the maximum temperature**
- **No external power supply**
- **Manual reset**

A
Page 389

Application

There are many application areas for safety temperature cut outs in the heating and process industries. In conventional oil-fired or gas-fired boilers, these devices are used to monitor the boiler water. The safety temperature cut outs feature a manual reset button which must be actuated for unlocking.

Description

If the temperature at the probe increases, the measuring liquid in the measuring system expands. If the temperature exceeds a critical value, the device triggers, the voltage-free contact switches and the system is set to a defined safe state. When the temperature has decreased by approx. 15 K, the device can be unlocked and the system resumes operation.

12

Surface mounting thermostats with housing GAT

- **Mechanical temperature controller**
- **Ideal for underfloor heating systems**
- **Temperature limitation at pipes**
- **Easy installation with strap**

Application

Surface mounting thermostat for strap mounting at pipes from 16 to 100 mm diameter. The version with internal adjustment and temperature control range up to 60 °C is specially suited for underfloor heating systems.

Description

The surface mounting thermostat us a bimetal strip (element consisting of two metal strips with different heat expansion coefficients). When the temperature changes, the bimetal strip bends which triggers electrical switching.

CATALOGUE INDUSTRIAL TECHNOLOGY

Temperature measuring instruments and controllers for industrial technology

Bimetal stainless steel thermometers

+ For corrosive media

+ Pointer adjustable in case of "plain" connection

Nominal sizes
63 – 80 – 100

Ranges
-20/+60, 0/60, 0/120, 0/160 °C

Page 269

Gas filled thermometers

+ For chemical, process engineering and food industry applications

+ Fast response

Nominal sizes
100 – 160

Ranges
-20/+60, 0/60, 0/120, 0/160, 0/200, 0/300, 0/400, 0/500 °C

Page 274

Resistance thermometers WTh 30

+ Hygienic design as per EHEDG recommendations

+ Various process connections, transducer can be integrated

+ Pt-100 sensor

+ Installation length up to 200 mm

Measuring ranges
-50/+200 °C

From page 291

Bimetal thermometers for chemical applications

+ For chemical, process engineering and food industry applications

+ Many options for adaptation to specific applications

Nominal sizes
63 – 80 – 100

Ranges
-20/+60, 0/60, 0/120, 0/160 °C

Page 269

Resistance thermometers WTh 24-28

+ Versions for machine and plant engineering, food, beverages and pharmaceutical industries, biotechnology

+ For medium to high pressure and flow loads

+ Pt-100 sensor

+ Installation length up to 400 mm

Measuring ranges
-35/+400, -35/+300, -35/+550 °C

Innovative. Future proof. Simply powerful.

From a simple measuring instrument to an all-rounder with CAPBs®

You already own an AFRISO BlueLine measuring instrument* and want to use it for the majority of your daily measuring tasks, for example, tightness test, gas leak detection, flow rate measurement or 4 Pa test? No problem with your AFRISO measuring instrument. In conjunction with the AFRISO CAPBs® base handle BG 10 and the sensor modules for a whole variety of different applications such as pressure, temperature, gas leak detection or humidity, almost all tasks of heating system technicians and chimney sweeps can be performed easily and with

high accuracy. The compact CAPBs® can be connected wirelessly via Bluetooth® Low Energy to the measuring instruments of the AFRISO BlueLine series* or to mobile devices. The new CAPBs® device displays the determined value on the display in real-time and provides a QR code for mobile devices for data transmission. All measurement data can be further processed with the AFRISO apps on the smartphone or tablet and saved as clearly structed PDF records.

ℹ️ See pages 410–415 for detailed information on the available CAPBs®.

AFRISO

The CAPBs® excel with an unprecedented diversity of measuring possibilities with a single system. Numerous sensor modules CAPBs® sens can be easily plugged into the modular base handles. The ergonomic handles themselves are made of high-quality plastic. The compact base handle BG 10, for example, contains the power supply (battery, optionally rechargeable), a tripod socket, a multi-purpose key and a multi-colour LED. The multi-purpose key features customisable function assignments. For example, it can be used for zero calibration regardless of the measuring site. In addition, a device for audible signals is integrated into the handle. The AFRISO measuring instrument or the apps for smartphone and tablet provide numerous pre-installed measurement menus for the CAPBs®. They include, for example, tightness test and load test, pressure loss measurement, gas leak detection, heating system check, hydraulic balancing, thermal disinfection, etc.

Bluetooth®

The following measuring instruments can be immediately used with a sensor module and the base handle CAPBs® BG 10:

* BLUELYZER ST, EUROLYZER STx, MULTILYZER STe/STx, pressure measuring instrument series S4600 ST and temperature measuring instrument TMD 9.

CAPBs® sensor modules for pressure measurement and tightness test

		Pressure measurement	Pressure measurement	Pressure measurement	Pressure measurement	Pressure measurement	Pressure transmitter
CAPBs®		PS 10 (20 mbar)	PS 20 (180 mbar)	PS 33 (2 bar)	PS 40/41 (6 bar)	PS 60/61 (20 bar)	PT 70 (25 bar)
Application examples		Measurement of ultra-fine pressure (Pitot measurement)	Check of connection and flow pressure in gas-fired heating systems	Evaluation of serviceability (TRGI)	Tightness and load test of gas lines	Stress pressure test at pipe systems	Test of water pipes (test medium water) as per ZVSHK

Welcome to the future.

Cutting edge measuring technology – AFRISO CAPBs® measuring units.

Comprehensive

Easy extension of BlueLine measuring instruments* by a great variety of applications such as pressure measurement, temperature measurement, humidity measurement, volume flow or Pitot measurement as well as gas leak detection, flow measurement, hydraulic balancing, etc.

Wireless

Wireless, immediate transmission of the measurement data to your AFRISO measuring instrument, smartphone or tablet with Bluetooth® Low Energy technology.

Flexible

Base handle BG 10 with multi-purpose key with customisable function assignment for ease of use and consistent operation of the CAPBs®, regardless of site.

Accurate

Position-independent, temperature-compensated sensor technology for maximum precision in all measuring scenarios.

Modular

Numerous, versatile applications thanks to modular design with universal base handle for all sensor modules.

Universal

Compatible with our proven BlueLine measuring instruments* or your smartphone and tablet.

The following measuring instruments can be immediately used with a sensor module and the base handle CAPBs® BG 10:

* BLUELYZER ST, EUROLYZER STx, MULTILYZER STe/STx, pressure measuring instrument series S4600 ST and temperature measuring instrument TMD 9.

Proven

Easy documentation of measurement results on site via IR or Bluetooth® Low Energy interface of the BlueLine measuring instrument.

Focused

Measurement data centre for saving the measurement results in the BlueLine measuring instrument or the app. Optional data logger function for data output in XML format for flexible further processing with standard software applications such as MS Excel.

Error-free

Simultaneous storage of all measured data to the measuring instrument or the mobile devices helps to avoid errors, for example caused by incorrect readings.

Ergonomic

Light-weight, ergonomic handle made of robust, high-quality plastic with three integrated magnet for hands-free operation.

Bluetooth®

Ready for measurement

Free firmware update for BlueLine measuring instruments* with pre-installed measurement menus for all available CAPBs® – can be done by the user at any time via the microSD card.

FlowTemp® STx

GET IT ON
Google Play

Download on the
App Store

Independent

Free app for EuroSoft live for operation of all CAPBs® via smartphone and tablet. With pre-installed measurement menus for special applications (for example, gas line checks) and graphical representation of the measurement results.

EuroSoft live app

live

AFRISO TOOLBOX App

TOOLBOX

Quality

100 % made in Germany.

Energy-saving

Automatic switching off of the CAPBs® when the Bluetooth® Low Energy connection is closed ensures low energy consumption.

Revolutionary

Continuous, simultaneous flow and temperature measurement in water applications with the new, TÜV-tested flow rate/temperature measuring instrument FlowTemp® STx.

Appendix – Technical Information

13

Seminars and Training

Professional and practical. With our courses, workshops and seminars, you benefit from our many years of in-depth experience in the field of measuring and control technology. Our entire offering responds to current topics and standards as well as customer requirements. Of course, it is also possible to arrange for individual in-house courses and seminars to be provided at your site.

AFRISO training programme

Smart home expert
One-day training seminars to provide an overview of and structure an AFRISO smart home system

Tank protection and leak protection lining
Two-day seminar on the installation of leak protection linings and leak detectors (theory and practice)

Fuel oil consuming system current status
One-day seminar on planning, modernising and converting heating oil supply systems

Hydraulic Balancing
One-day seminar on hydraulic balancing with the VarioQ valve program with measuring function

Heating system check as per EN 15378
One-day seminar on the inspection and evaluation of heating systems

HVAC service with BlueLine, CAPBs® and apps
One-day seminar on the typical measuring tasks of HVAC professionals

Dust measurement at solid-fuel systems
One-day seminar on working with the dust measuring instrument STM 225 BLACK EDITION (theory and practice)

Our Service – Your Benefit

Flexible, cost-aware, on schedule, solution-orientated and fast – the AFRISO team always provides the decisive added value.

Information and presentation
Whether telephone support or on site: Our consultants speak your language – we provide you with personal and individual consulting worldwide. And if you have an in-house event for your customers, we will be glad to participate.

After sales service
Whether commissioning, professional maintenance, calibration or function checks – a network of service centres and our specialists in the plant support you in getting the maximum out of your AFRISO product. For safe processes, precise measurement results, compliance with legal requirements and a long service life.

Repair service
In the case of a malfunction, request a return slip at service@afriso.de and send us your AFRISO device along with a short description of the problem. We will deal with your request within a few workdays.

Renal devices
You cannot afford to do without your instrument? No problem, our rental service ensures that you remain on duty. When you send your device for maintenance or repair, you can indicate if you are interested in a rental device. We will immediately get in touch with you.

13

AFRISO information material – brochures and flyers

Discover new opportunities and sales potential with AFRISO quality products. We offer a large variety of information materials and media for wholesalers, points of sale, associations, HVAC companies and tank protection companies. You can order these media from us free of charge – even large numbers of copies. All printed materials allow you to add your company stamp to the back page.

Flyers, brochures and product overviews

Flyers, brochures, and product overviews provide information on individual products or complete product ranges for various application areas.

Product literature for end consumers

Product literature for end users is a great medium for fairs, exhibition rooms, mail campaigns and other activities. They present the benefits and applications of AFRISO products for building technology and tank protection in private households in a concise, easy-to-understand way.

13

i

All information material can be downloaded from the download centre at www.afriso.com. If you want to order for free, simply specify the number of copies required in your e-mail to **marketing@afriso.de.**

AFRISO

Downloads

On www.afriso.com, you can find all product-relevant information such as operating instructions, brochures, special forms, certificates, CAD files or suitable software directly on the product page under Downloads.

Visit the INFO CENTRE on www.afriso.com for comprehensive information, technical specifications, terms and conditions, valuable downloads and the latest news – all around the clock.
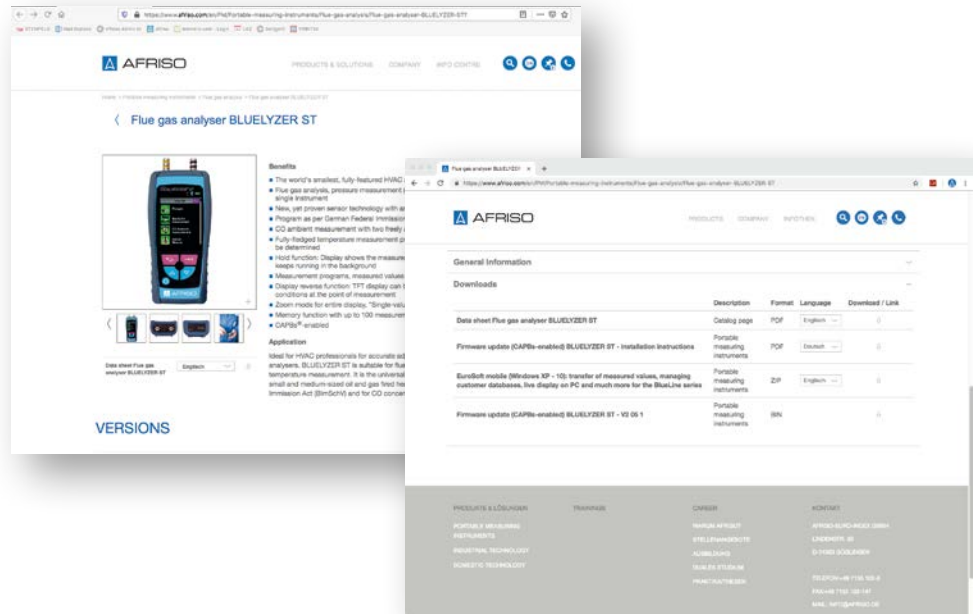

Operating instructions

In addition to product descriptions, the operating instructions include detailed technical specifications, mounting, installation and safety information as well as information on approvals for all AFRISO products.
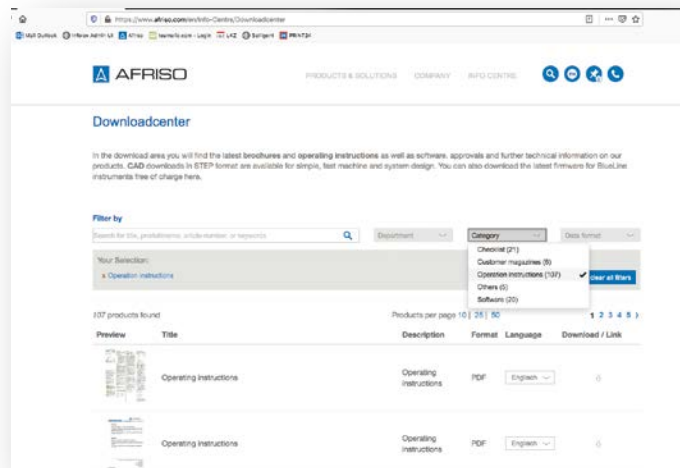

Software

Due to continuous improvements and to changes in legislation and directives, we provide software updates for electronic measuring instruments on an ongoing basis. The updates and the appropriate instructions can be downloaded from our website for free.

TYPE APPROVAL CERTIFICATE

Certificate No: TAA000010J
Revision No: 1

This is to certify:
That the Pressure Indicator

with type designation(s)
RF_ _, Series D4_ _, D7_ _, D8_ _, and D9_ _

Issued to
Afriso-Euro-Index GmbH
Amorbach, Germany

is found to comply with
DNV GL rules for classification – Ships, offshore units, and high speed and light craft

Application :
Product(s) approved by this certificate is/are accepted for installation on all vessels classed by DNV GL.

Temperature	D
Humidity	B
Vibration	B, C
EMC	Not relevant
Enclosure	C

Issued at **Hamburg** on **2017-06-08**
This Certificate is valid until **2022-05-31**.
DNV GL local station: **Augsburg**

Approval Engineer: **Didier Girardin**

for **DNV GL**

Joannis Papanuskas
Head of Section

This Certificate is subject to terms and conditions overleaf. Any significant change in design or construction may render this Certificate invalid. The validity date relates to the Type Approval Certificate and not to the approval of equipment/systems installed.

Form code: TA 251 | Revision: 2016-12 | www.dnvgl.com | Page 1 of 2
© DNV GL 2014. DNV GL, and the Horizon Graphic are trademarks of DNV GL AS.

Job Id: 262.1-005533-3
Certificate No: TAA000010J
Revision No: 1

Product description
Type : RF__. Version designation, Series D4_ _, D7_ _, D8_ _ and D9_ _ in any combinations as follows:

	Type		Version Designation Ch, ChGly, ChF, F, Gly, I, KTGly, Oo		Series	
RF	40			D	4	0	1
	50				7	1	2
	63				8	2	
	80				9	3	
	100					4	
	160					5	

Application/Limitation

Tests carried out
Applicable tests according to Class Guideline DNVGL-CG-0339, Nov 2016

Marking of product
The products to be marked with:
- manufacturer name
- model name
- lot number (encoded - includes manufacturer name, model name, manufacturing date)

Manufacturing Places
- Afriso-Euro-Index GmbH Amorbach, Germany
- Afriso-Euro-Index SRL Bukarest, Romania
- Afriso Measurement & Control Technology Co.Ltd. Suzhou City, China

Periodical assessment
The scope of the periodical assessment is to verify that the conditions stipulated for the type are complied with, and that no alterations are made to the product design or choice of systems, software versions, components and/or materials.
The main elements of the assessment are:
- Ensure that type approved documentation is available
- Inspection of factory samples, selected at random from the production line (where practicable)
- Review of production and inspection routines, including test records from product sample tests and control routines
- Ensuring that systems, software versions, components and/or materials used comply with type approved documents and/or referenced system, software, component and material specifications
- Review of possible changes in design of systems, software versions, components, materials and/or performance, and make sure that such changes do not affect the type approval given
- Ensuring traceability between manufacturer's product type marking and the type approval certificate

Periodical assessment is to be performed at least every second year and at renewal of this certificate.

Information on the flange standard EN 1092 / international comparison of grades
Conversion to EN 1092

The new flange standard EN 1092-1 for all flange types has been in effect since June 2002. Currently, the old standards are still in use. However, this will change since the old standards are no longer maintained and updated. New standards will exclusively refer to EN 1092.

AFRISO flanges

AFRISO usually ships type B1 flanges as per EN 1092. This flange type differs from the former type C flanges as per DIN 2630 only in terms of the surface quality of the sealing surface. Flanges according to the old standard are available upon request.

Flanges	Sealing surface	OLD (DIN 25../26..)			NEW (EN 1092-1)	
		Shape	Standard	R_Z (µm)	Shape	R_Z (µm)
Flat		A B	DIN 2573 DIN 2576	– 40 – 160	A	12.5 – 50
Raised face		C D E	DIN 2630 to DIN 2638	40 – 160 40 16	B1* B2**	12.5 – 50 3.2 – 12.5
Spring / Groove		F N	DIN 2512		C D	3.2 – 12.5
Spigot / Recess		V 13 R 13	DIN 2513		E F	12.5 – 50
Spigot / Recess		V 14 R 14	DIN 2514 for O rings		H G	3.2 – 12.5

* Typically PN 2.5 to PN 40.   ** Typically PN 63 and PN 100.

Information on the Pressure Equipment Directive (PED) 2014/68/EC
Pressure Equipment Directive (PED)

The European Pressure Equipment Directive (PED) came into force on May 30, 2002. The following paragraphs provide some information on the Directive itself and on our activities within the framework of this Directive.

- AFRISO-EURO-INDEX GmbH pressure gauges with a full scale value of > 0.5 bar are subject to the Pressure Equipment Directive and meet the appropriate requirements.

- Since the future application conditions of most pressure gauges are normally not completely known at the time of manufacture, we always manufacture our products in accordance with the most stringent criteria (gases of group 1).

- This way, our pressure gauges with a full scale value of 200 bar receive a CE mark according to the conformity assessment procedure.

- Pressure gauges with a connection flange of > DN 25 receive a CE mark with a full scale range of 0.5 bar and greater.

- The CE mark is attached to the outside of the housing (type designation plate).

- A declaration of conformity is provided on request.

- Detailed operating instructions and the appropriate data sheets are available at www.afriso.com. They can also be sent to you on request.

- Pressure gauges with a full scale value of less than 0.5 bar and loose chemical seals do not fall under the PED and must not carry a CE mark.

- Pressure gauges with a full scale value of between 0.5 bar and 200 bar fall under "Good Engineering Practice" and must not carry a CE mark (section 4, paragraph 3).

- We are not authorised to CE mark pressure gauges without a company name or a company logo.

- Pressure gauges which are used as a part of a safety system installed to protect against exceeding permissible limit values (equipment parts with a safety-related function) are treated separately.

- Our pressure gauges comply with the European Standards EN 837-1 and EN 837-3 and are manufactured and tested according to the appropriate requirements.

13

Selection criteria/safety considerations for pressure gauges as per EN 837-2

Medium	Liquid							
Housing	Without filling				With filling			
Nominal size	40/50/63/80		100/160/250		40/50/63/80		100/160/250	
Range bar	≤ 25	> 25	≤ 25	> 25	≤ 25	> 25	≤ 25	> 25
Code for minimum safety version	0	0	0	0	S1	S1	S1	S1
AFRISO type designation	All	All	All	All	D6/D7/D8	D6/D7/D8	D7/D8	D7/D8

Medium	Gas or steam (attention: not applicable to oxygen + acetylene*)							
Housing	Without filling				With filling			
Nominal size	40/50/63/80		100/160/250		40/50/63/80		100/160/250	
Range bar	≤ 25	> 25	≤ 25	> 25	≤ 25	> 25	≤ 25	> 25
Code for minimum safety version	0	S2	S1	S3	S1	S2	S1	S3
AFRISO type designation	All	"A"	D4/D9	RF 100/160 Si D4x2	D6/D7/D8	"B"	D6/D7/D8	RF 100/160 Si D8x2

Explanations of key:

"A"   RF 63 Ch D 9x2, RF 63 Si D 4x2, RF 50/63 ST, RF 50/63 GT,
        RF 63 MK/IK D 3x2
"B"   RF 63 D 7x2, RF 63 Si D 8x2

0   Pressure gauges without blow-out
S1   Pressure gauges with blow-out
S2   Safety pressure gauges without solid baffle wall
S3   Safety pressure gauges with solid baffle wall (for higher safety level)

Note 1:
Pressure gauges for oxygen and acetylene must meet the requirements for safety pressure gauges (NS 40 – 80 S2, NS 63/100/160 S3).

Note 2:
Pressure gauges with glycerine filling must not be used for oxygen or other oxidation process fluids. High-concentration fluorine liquids and chlorinated liquids (for example, halocarbon) can be used for such applications.

Note 3:
This table contains the standard safety version with the corresponding keys. Users must take into consideration any information they have concerning their special requirements and may also use safety pressure gauges at pressures below than 25 bar.

13

i

Silicone-filled pressure measuring instruments may not be used in production facilities for paint and lacquer and in paint shop environments.

AFRISO

Selection criteria/safety considerations for pressure gauges as per EN 837-2

Pressure gauges for oxygen and acetylene

Only safety pressure gauges (S2 and S3) may be used.
All materials for wetted parts (parts coming into contact with oxygen or acetylene) must comply with EN 29539.

Pressure gauges for oxygen

The Bourdon tube and other wetted parts must be free from oil and grease. Only lubricants suitable for oxygen at maximum operating pressure may be used.

The dial must bear the word "oxygen" in English and the international symbol for "free from oil and grease" (symbol 0248 according to ISO 7000 with the "oil prohibited" symbol):
Oxygen and acetylene

General Terms of Delivery
of AFRISO-EURO-INDEX GmbH · Lindenstraße 20 · 74363 Güglingen · Germany

§ 1 Validity

(1) All our deliveries, services and offers are exclusively made on the basis of the General Terms of Delivery. These General Terms of Delivery are part of all contracts with our contract partners (hereinafter referred to as "customers") we conclude pertaining to the deliveries or services provided by us. They also apply to all future deliveries, services or offers to the customer, even if they are not separately agreed again.

(2) General terms and conditions of the customer shall only become part of the contract if we expressly consent to their validity in writing. This consent requirement shall apply in any and all cases, even if, for example, we carry out deliveries to the customer without expressly rejecting the customer's general terms and conditions even though we are aware of such terms and conditions.

(3) Our General Terms of Delivery shall only apply if the customer is a business person (§ 14 BGB, German Civil Code), a legal person of public law or a public-law fund.

(4) The General Terms of Delivery shall apply in particular to contracts covering the sale and/or delivery of movable goods ("goods"), regardless of whether we manufacture the goods ourselves or purchase them from suppliers (§§ 433, 631 BGB, German Civil Code). Unless otherwise agreed, the General Terms of Sale in the version valid at the time of the customer's order shall be deemed to be an outline agreement for future contracts of the same kind; we shall not be obliged to state their validity for each and every individual case.

(5) Individual agreements with the customer (including supplementary agreements, amendments and modifications) which have been made in individual cases shall always take precedence over these General Terms of Delivery. The contents of such agreements shall be subject to a written contract and/or our written confirmation, subject to proof of the contrary.

(6) Legally relevant declarations and notifications by the customer in relation to the contract (e.g. setting of a deadline, notification of defects, withdrawal or reduction) must be made in writing (e.g. letter, e-mail, fax). Statutory formal requirements and other evidence, especially in the event of doubts about the legitimacy of the declaring party, remain unaffected.

(7) Any reference to the validity of statutory provisions is only for the purpose of clarification. Even without such a clarification, therefore, the statutory provisions shall apply if and to the extent that they have not been modified or expressly excluded in these General Terms of Delivery.

§ 2 Offer and conclusion of contract

(1) All our offers are free and non-binding, unless they are expressly marked as binding or contain a certain acceptance period. We shall have the right to accept orders within a period of fourteen days after receipt.

(2) The legal relationship between us and the customer shall be governed solely by the written purchase agreement, including these General Terms of Delivery. The written purchase agreement contains all agreements between the parties with regard to the contract. Any communication by us not made in writing prior to the conclusion of this contract is legally non-binding; any agreements of the contract parties not made in writing shall be replaced by the written contract, unless it is expressly stated that they shall be binding.

(3) Amendments and modifications to the agreements, including these General Terms of Delivery, must be made in writing in order to be effective. With the exception of managers or authorized signatories, our employees are not entitled to make any differing verbal agreements. Transmission via telecommunication systems, in particular via fax or via e-mail, shall be deemed to be a sufficient instrument in writing, provided that the copy of the signed declaration is transmitted.

(4) Any information or representation whatsoever on our part with regard to the delivery or service (such as, but not limited to weights, dimensions, performance values, loads, tolerances and technical data) shall be deemed to be approximate, unless the usability for the purpose provided by the contract requires accurate conformity. Such information or representations do not constitute guaranteed characteristics, but descriptions or markings of the delivery or service. Any standard deviations and deviations which are made according to statutory provisions or which represent technical improvements, as well as the replacement of components by equivalent parts, are permissible if they do not impair the usability for the purpose intended by the contract.

(5) We reserve the right to property or copyright to all offers and cost estimates submitted by us as well as to all drawings, illustrations, calculations, brochures, catalogues, models, tools and other documents and equipment provided to the customer. The customer shall not be permitted to disclose these objects, as such or in content, to third parties, to make them known, to use them himself or through third parties or to reproduce them. At our request, he shall be obliged to completely return such objects to us and to destroy any copies produced if they are no longer required by him in the normal course of business or if negotiations do not lead to the conclusion of a contract. Storage of data provided electronically for the purpose of standard data backup shall be the only exception to this.

§ 3 Prices and payment

(1) The prices apply to the scope of services and delivery specified in the order confirmations. Additional or special services will be charged separately. The prices are in EURO ex works plus packaging, the applicable value added tax, and, for export deliveries, customs duties as well as fees and other public charges.

(2) If the agreed prices are based on our list prices and if the delivery is to be effected more than four months after conclusion of the contract, our list prices valid at the time of delivery shall apply (minus any percentage discount or fixed discount that may have been agreed).

(3) Invoices shall be payable within 30 days from the invoice date without any deduction, unless otherwise agreed in writing. The date of unconditional credit on our business account shall be decisive for payment in due time. Payment by check shall be excluded, unless agreed separately, as the case may be. If the customer does not pay by the due date, an interest of 5 % per year shall be due on the amounts payable; we shall be entitled to claim higher interest and further damages.

(4) Any set-off with counterclaims of the customer or retention of payments due to such claims shall only be permissible if and to the extent that such counterclaims are undisputed or asserted by a court.

(5) We shall be entitled to deliver or provide outstanding deliveries or services after prepayment or provision of security if, after the conclusion of the contract, we become aware of circumstances which substantially reduce the creditworthiness of the customer and which jeopardise the payment of our outstanding claims arising from the contract against the customer (including claims from other individual contracts pursuant to the same outline agreement).

§ 4 Delivery and delivery period

(1) Deliveries are made ex works.

(2) Time limits and deadlines for deliveries and services indicated by us are only approximate, unless a fixed deadline or a fixed date has been explicitly assured or agreed. If shipping has been agreed, delivery periods and delivery dates refer to the date of transfer to the forwarding agent, freight carrier or to any other third party in charge of shipping.

(3) Without prejudice to our rights arising from default of the customer, we shall be entitled to demand from the customer an extension of delivery and performance periods or a postponement of delivery and performance dates for the period during which the customer does not meet his obligations pursuant to the contract.

13

AFRISO

(4) We shall not be liable for impossibility of delivery or for delays in delivery, if such impossibility or delay is caused by force majeure or other events unforeseeable at the time of the conclusion of the contract which are beyond our control or for which we cannot be held responsible or which we have not caused (e.g. disruptions of operations of any kind, difficulties in procuring materials or energy, transport delays, strikes, lawful lockouts, lack of labour, energy or raw materials, difficulties in procuring necessary regulatory approvals, governmental measures, or incorrect or delayed supply by suppliers. Insofar as such events make the delivery or service substantially more difficult or impossible and the hindrance is not only of temporary duration, we are entitled to withdraw from the contract. In the case of hindrances of a temporary nature, the delivery or performance periods shall be extended or the delivery or performance dates shall be postponed by the period of the hindrance plus a reasonable start-up period. If, as a result of the delay, the customer cannot reasonably be expected to accept the delivery or service, the customer shall be entitled to withdraw from the contract, which is to be performed immediately by an instrument in writing.

(5) We shall be entitled to deliver and provide partial deliveries and partial services only:
- if the partial delivery is reasonable for the customer and sufficient consideration is given to his legitimate interests,
- if the delivery of the remaining ordered goods is assured and
- if, as a result, the customer does not incur any substantial additional costs or additional efforts (unless we are willing to pay for such costs).

(6) If we are in default with a delivery or service or if a delivery or service is impossible for any reason whatsoever, our liability for compensation shall be limited pursuant to provision § 8 of these general Terms of Delivery.

§ 5 Place of performance, shipping, packaging, passage of risk, acceptance

(1) The place of performance for all obligations resulting from the contract shall be the registered office of our company in Güglingen, unless other agreements have been made. If the installation is part of the contract, the place of performance shall be the place at which the installation is to be performed.

(2) The type of shipping and packaging are subject to our discretion. The cost of shipping and packaging shall be borne by the customer. If the customer requires drop shipping delivery, we shall charge a processing fee of EUR 10.00 for each delivery.

(3) In cases of small orders with a net purchase value of less than EUR 100.00, we will charge a processing fee of EUR 15.00 in addition to shipping and packaging.

(4) The passage of risk to the customer shall be the point in time of the transfer of the good to be delivered (the beginning of the loading process being decisive) to the forwarding agent, freight carrier or to any other third party in charge of shipping. This shall also apply in the case of partial deliveries or if we have undertaken other obligations (e.g. shipping or installation). If the shipment or the transfer is delayed for a reason caused by the customer, the transfer of risk shall be the day on which the good to be delivered is ready for shipment and we have notified the customer to this effect.

(5) Storage costs incurred by us after transfer of risk shall be borne by the customer. If we store the goods to be delivered, the storage costs amount to 0.25% of the invoice amount of the delivered goods per completed week. We reserve the right to assert and prove further or lower storage costs.

(6) We will insure the shipment for transport without recognizing any legal obligation to this effect.

(7) If acceptance has to take place, the purchase item shall be deemed accepted if:
- the delivery and, provided we also have to perform installation, the installation are completed,
- we have communicated this to the customer with reference to the deemed acceptance in accordance with this provision § 5 (7) and have prompted the customer to accept the delivery,
- 12 business days have passed since the delivery or installation, or the customer has begun to use the purchased item (e.g. a delivered plant has been put into operation) and, in this case, six workdays have passed since delivery or installation, and

- within this period, the customer has refused acceptance for any reason other than for a defect of which the customer has notified us and which substantially impedes or make impossible the use of the purchased item .

§ 6 Warranty, material defects, acceptance of the disposal obligation by the customer

(1) The warranty period shall be one year from the date of delivery or, if acceptance is required, from the date of acceptance. This period shall not apply to claims for damages on the part of the customer resulting from injury to life, body or health or from wilful or grossly negligent breach of duty by us or our vicarious agents, which are subject to the limitation periods according to the statutory provisions.

(2) The goods delivered must be carefully inspected immediately after delivery to the customer or to the third party designated by the customer. With regard to obvious defects or other defects which would have been recognizable in the case of an immediate, careful examination, they shall be deemed to be accepted by the customer if we do not receive written notification of defects within seven workdays after delivery. With regard to other defects, the delivery items shall be deemed to have been accepted by the customer if the notice of defect does not reach us within seven workdays after the date of detection of the defect; if the defect was already recognizable by the customer at an earlier point in time in normal use, this earlier point in time shall be decisive for the beginning of the complaint period. Upon request by us, a rejected delivery item must be returned to us free of freight charges. In the case of a justified complaint, we shall reimburse the costs of the least expensive type of shipping; this shall not apply if the costs increase because the delivery item is located at a place other than the place of the intended use.

(3) In the case of material defects of the goods delivered, we shall first be obliged and entitled to rectify or replace the goods within a reasonable time. In case of failure, i.e. impossibility, unreasonableness, refusal or unreasonable delay of the improvement or replacement delivery, the customer shall be entitled to withdraw from the contract or to reasonably reduce the purchase price.

(4) Insignificant or typical variations in colour, dimensions, weight and quality shall not be considered to be defects of the delivery items.

(5) If a defect is the result of error on our part, the customer shall be entitled to claim damages under the conditions stipulated in provision § 8 hereto.

(6) In the case of defects of components of other manufacturers, which we cannot remedy for license or actual reasons, we will, at our discretion, assert our warranty claims against the manufacturers and suppliers on behalf of the customer or assign them to the customer. In the case of such defects, there shall only be warranty claims against us subject to the other conditions and according to the provisions of these General Terms of Delivery and only if the aforementioned claims against the manufacturer and suppliers could not be enforced or if such enforcement is futile, for example, due to insolvency. During the duration of the legal dispute, the period of limitation of the customer's warranty claims against us shall be suspended.

(7) The warranty shall be void if the customer modifies the delivery item without our consent or has it modified by a third party and such modification renders the rectification of the defect impossible or unreasonable. In any such case, the customer shall bear the additional costs arising from such modification for rectification of the defect.

(8) If, in individual cases, a delivery of used items is agreed with the customer, such delivery shall be performed under exclusion of any warranty for material defects.

(9) The customer shall be obliged to dispose of the delivered goods when they are no longer used at his own cost and in full compliance with all pertinent regulations. The customer shall indemnify us from the obligations pursuant to § 19, section 2 of the German Electronic Equipment Act (obligation of the manufacturer to take back the product) and from any claims of third parties related to this. The customer shall contractually oblige any other commercial third party to which the customer transfers the delivered goods to dispose of

13

such goods according to the pertinent regulations when such goods are no longer used. If the customer fails to contractually oblige third parties to which the customer transfers the delivered goods to take on the disposal obligation and to oblige his customers to take on such disposal obligation, the customer shall be obliged to take back the delivered goods at his own expense after the end of use and to dispose of them properly in accordance with the statutory provisions. Our claim to the above transfer of obligation/indemnification through the customer shall be extended by a period of limitation of two years after the final termination of the usage of the delivery item. The two-year period of suspension of the limitation shall not begin until we receive a written notice from the customer stating that he has ceased to use the device.

§ 7 Infringement of property laws

(1) Pursuant to this provision § 7, we shall ensure that the delivery item is free from industrial property rights or third-party copyrights. Each contract partner shall immediately notify the other contract partner in writing if claims with regard to the infringement of such rights are asserted against him.

(2) In the event that the delivery item infringes an industrial property right or copyright of a third party, we shall, at our discretion and at our expense, alter or replace the delivery item in such a way that no rights of third parties are infringed, but the delivery item continues to fulfil the contractually agreed functions; or we shall enter into a license agreement in order to obtain the right to use the delivery item for the customer. If we should not be able to succeed within a reasonable period, the customer shall be entitled to withdraw from the contract or to reasonably reduce the purchase price. Any claims for damages of the customer are subject to the restrictions of provision § 8 of these General Terms of Delivery.

(3) In the case of infringements of laws by products of other manufacturers delivered by us, we shall, at our discretion, assert our claims against the manufacturers and suppliers on behalf of the customer or assign such claims to the customer. In these cases, there shall only be claims against us subject to the provisions of this provision § 7 and only if the aforementioned claims against the manufacturer and suppliers could not be enforced or if such enforcement is futile, for example, due to insolvency.

(4) If an order is to be filled (designs, etc.) according to customer specifications, drafts or instructions, it is the sole responsibility of the customer to obtain all rights of commercial exploitation of the property rights that may be contained in his specifications, drafts or instructions. If the execution of an order according to specifications, etc. of the customer violates third-party property rights or labelling obligation, the customer shall undertake to indemnify us from any resulting claims for compensation, compensation for expenses and / or reimbursement of third parties.

§ 8 Liability for damages in case of fault

(1) Our liability for damages, irrespective of the legal grounds, in particular from impossibility, delay, defective or incorrect delivery, breach of contract, breach of obligations in the case of contractual negotiations and tort, shall be limited subject to the provisions of this provision § 8.

(2) We shall not be liable in the case of simple negligence on the part of our organs, legal representatives, employees or other vicarious agents, to the extent that this is not a violation of contractual obligations. Essential with regard to the contract are the obligation to deliver and/or install the delivery item in good time, its freedom from deficiencies in law and its freedom from defects which impair its functionality or usability more than insignificantly, as well as advisory, protection and custodial obligations which allow the customer to use the delivery item as per contract, or which serve the protection of the health or life of the customer's personnel or the protection of his property against substantial damage.

(3) To the extent that we are liable for damages pursuant to provision § 8 (2) hereto, such liability shall be limited to damages which we have foreseen at the time of conclusion of the contract as a possible consequence of an infringement of the contract, or which we should have foreseen applying due diligence. Indirect damages and consequential damages which

are the result of defects of the delivery item shall only be subject to damages to the extent that such damage is typically to be expected when the delivery item is used as intended.

(4) In the case of liability for simple negligence, our obligation to indemnify for damage to property and consequential financial loss shall be limited to the amount covered by our liability insurance and standard in our industry, even in the case of a breach of essential contractual obligations. Upon request, we will provide the customer with a corresponding insurance confirmation stating the amount covered by the liability insurance carrier.

(5) The above exclusions and limitations of liability shall apply to the same extent on behalf of our organs, legal representatives, employees and other vicarious agents.

(6) If we provide technical information or consultancy services and such information or services are not a part of the scope of services agreed upon by contract and owed by us, this shall be free of charge and without any liability whatsoever.

(7) The limitations of this provision § 8 shall not apply to our liability for intentional conduct, for guaranteed characteristics, for injury to life, body or health or pursuant to the German Product Liability Act (Produkthaftungsgesetz).

§ 9 Retention of title

(1) We retain the title to the sold goods until we have received full payment of all our present and future receivables arising from the purchase contract and from an ongoing business relationship (secured claims).

(2) Prior to full payment of the secured claims, the goods subject to retention of title shall neither be pledged to third parties nor transferred to third parties for security. The customer shall notify us in writing immediately if an application for the opening of insolvency proceedings is filed or if third parties attempt to seize the goods under retention of title (e.g. by means of distraint or attachment).

(3) In the case of a breach of contract by the customer, in particular in the event of non-payment of the purchase price due, we shall be entitled to withdraw from the contract pursuant to the statutory provisions and to reclaim the goods as a result of retention of title and withdrawal. If the customer does not pay the purchase price due, we shall only be entitled to assert these rights if we have previously set the customer a reasonable deadline for payment without success, or if such a deadline is not required pursuant to the statutory provisions.

(4) The customer shall be entitled to resell and/or process the goods under retention of title in the ordinary course of business, subject to revocation pursuant to (c) below. In this case, the following provisions shall apply in addition.
(a) The retention of title shall cover the full value of the products resulting from processing, mixing or combining our products; we shall be deemed the manufacturer. If, in the case of processing, mixing or combining with goods of third parties, their rights of ownership remain, we shall acquire co-ownership to the ratio of the invoice amounts of the processed, mixed or combined goods. The same provisions that apply to the goods delivered under retention of title shall apply to the resulting new product.
(b) The customer shall assign to us, as a security, the claims arising against third parties from the resale of the goods or of the product in whole or to the amount of our possible co-ownership pursuant to the preceding paragraph. We accept the assignment. The obligations of the customer pursuant to provision § 9 (2) hereto shall also apply in respect of the assigned claims.
(c) The customer shall remain entitled to collect the claim in addition to us. We undertake not to collect the claim as long as the customer meets his payment obligations, as long as the customer performs and as long as we do not assert the retention of title by exercising a right pursuant to provision § 9 (3) hereto. If any of the above conditions are not met, we shall be entitled to request the customer to notify us of the assigned claims and the corresponding debtors and provide us with any information and the appropriate documents necessary for us to collect such claims, and to notify the debtors (third parties) of such assignment. In this case, we shall also be entitled to revoke the customer's authorization to resell and process the goods subject to retention of title.

13

AFRISO

(d) If the liquidable value of the securities exceeds our claims by more than 10 %, we shall, at the customer's request, release securities at our discretion.

§ 10 Final clause

(1) If the customer is a merchant, a legal person under public law or a public-law fund or if the customer has no general court of jurisdiction in the Federal Republic of Germany, the place of jurisdiction for all disputes arising from the business relationship between us and the customer shall be our registered office in Güglingen or the registered office of the customer. However, in such cases, Güglingen shall be the exclusive place of jurisdiction for actions against us. This provision does not affect statutory provisions regarding exclusive places of jurisdiction.

(2) The relations between us and our customers are subject exclusively to the laws of the Federal Republic of Germany. The United Nations Convention on Contracts for the International Sale of Goods (CISG) of April 11, 1980 shall not apply.

(3) If and to the extent that the contract or these General Terms of Delivery contain gaps in the provisions, those statutory provisions shall be deemed to have been agreed upon which the contract parties would have agreed upon in view of the economic objectives of the contract and the purpose of these General Terms of Delivery if they had been aware of the gaps.

Note

The customer shall be deemed to have been notified that we store data relating to the contractual relationship pursuant to § 28 Bundesdatenschutzgesetz (German Federal Data Protection Act) for the purpose of processing such data and that we retain the right to disclose such data to third parties (e.g. insurance companies) if and to the extent such disclosure is required to perform the contract.
